"Hey," said James K. Schellenger, not catching on to the language of poetry. "Anyhow," he said, sympathetically, "for a sailor's heart is always in the right place, 'Col. Lansing said this bitters was a good substitute for whisky, and I knew you was temperance.'"

"In ten minutes we'll have a drum, by gosh!" This encouraged me immensely. It was growing cold. He insisted on giving me his weakfish line, and in five minutes I felt some power akin to the Norway Macdorm sucking at

my bait. "Hush!" said Schellenger (he of the Presidential name), "let him swallow the bait and when he starts give your line a strong pull." I did it.

The drum evidently thought Dante's Inferno was let loose on him, and came straight to the surface. (Here differing much from the red drum, which hides and sulks as long as it can from the face of man.)

Suddenly the black drum darted away, so as to sting the pulps of my hands. I gave the drum a strong pull, knowing I could drown him or tire him out in less than half an hour if my line didn't break; the very thought of which made me quake in my boots, and Schellenger, full of red blood, took a new and immense chunk of "Old Virginny" in his mouth, rubbed his hands together and yelled, "By the jumping jingo, that doggone lawyer has been a drum-master afore!" and when I brought to the surface his majesty with the black bands over his back and the red side they resemble a red drum closely, J. K. P. S. whispered, "Easy, easy James; you handle him handsomely, by jing!"

Away he darted again; (a fair vision of the drum showed him to be an eighty-pounder) I was worse scared than when I called on my first sweetheart at Hanover, Ind., thirty-seven years ago; but in twenty minutes he showed signs of surresis, and, as he crawled along, he brought his long side and yanked my left hand in his gills and thung on the bottom of the fishing skill the biggest drumfish I ever saw.

There was joy in that camp. We caught three in half an hour, and as the wind rose they ceased to bite. But, like true sportsmen, we lingered till 7:30 P. M., reluctant to leave the sacred ground. That night I tasted drum steak. "Old wine and fat venison" never tasted sweeter. Need I confess I laid in bed, at Sunday a sick man, drinking butter-milk and taking quinine and strychnia every three hours.

But I do not regret it. I find I can walk about my room to-day, and if I live till Saturday of this week, D. V., I will take a "whack" at the Bay View drum again. No man I ever knew ever died from going a-fishing. Horace Greeley died because he could not find time in his years to catch a trout or a delf. The black drum will live here here the middle of July.

CAPE MAY, JUNE 4, 1888.

JAMES M. SCOVILL.

## FISH PROSPECTS IN THE NORTH.

THE continued heavy rains have kept the waters in our lakes and streams up near high water mark, which has prevented the devotees of the "gentle art" from making, until quite recently, the large catches so earnestly sought after. Within the past few days a few good fish have been taken in the river quite near the city. One, a mascalonge, that tipped the beam at forty-five pounds. May 24 to 27, Mr. Leach, President of the M. G. C., with Messrs. Malby and Craig, members of the same club, visited their grounds at the mouth of the Mississippi River, but owing to the high water, their catch of bass was very small. Both in numbers and weight. Six years ago several thousand California salmon were planted in this river at Hightgate Falls, and this season quite a number of them have been taken by bait fishermen, and several hundred have been taken on "the sly" with the Frenchman's "little spear." Last week the writer visited the trout streams in the vicinity of Rutland, Vt., which, with picturesque, for between the trout fisheries, whose number is legion, and the country boys' snare, *S. fontinalis* has become a scarce article in that locality. Messrs. A. W. Higgins, J. C. Dunn, Dr. Putnam, of Rutland, with several other Vermont gentlemen, have associated themselves into a fraternal body, and have purchased from the Canadian Government a tract of land that contains several trout lakes, located north of the St. Lawrence, near Rivière du Loup on bank. These gentlemen were here in town to-day, en route for their newly purchased property, and the reception that they received from some of our resident sportsmen, proves that there are warm hearts among the sportsmen here in this city of the North. The great northern wilderness, which extends across the continent from ocean to ocean, and northward to the Pole, so far as it has been explored along its southern border, is full of trout lakes, and is a veritable paradise for the fly-fisher, who does not mind roughing it. During the summer months we can safely guarantee that it contains to the square inch a greater number of mosquitoes and black flies than any other country in the world. The most fragrant rose has the sharp-

MONTREAL, JUNE 5.

STANSTEAD.

## BLACK BASS IN THE OSWEGO RIVER.

THE Oswego (N. Y.) *Palladium* says: "The Oswego River is the favorite haunt of that gamiest of all the small fly gobbling fish—the brook trout not excepted. The black bass of the Oswego River run from a half pound to two and a half—the latter not plenty—the average being from three-quarters to a pound in weight. These are genuine black bass, and they contain more fight to the square inch than any fish that swims."

"The indications are that the fishing on the river will be good this year. In the past there has been a good deal of net fishing done in the early spring and in violation of law. There has also been large destruction of bass by the celtivres at Fulton and other places. We are informed that this spring little of this piracy has been done, and the law-abiding sportsmen of the river say that for the past week, at sunrise and sunset the rises have been plenty and the indications of game very encouraging."

"We have in previous years told about the places in the river where the black bass live. At the risk of being tedious we will briefly mention some of the places where a summer day may be spent and the favorite haunts of the bass. Generally it may be said that the whole stream, from its mouth at Oswego to Three River Point—twenty-three miles—is one stretch of fishing bottoms. Of course some places are better than others, and here are a few of the better places."

"Back of the mills and starch factory in this city, among the rifts, and even down to the upper bridge, good black bass can be had in the early season and are 'fished out' during the first day and up to the high dam on the west side of the stream there are some excellent bottoms, and in the rifts under the high dam and near the water-works pump house, there are some of the finest bass in the whole river. The skilled fisher who chooses his flies aright, and who whips the waters about this dam, will not come away with an empty basket."

"Above high dam comes 'Brosmer's level'—one of the best on the river, though it is short, and consequently not

so attractive as some of the levels. There are, however, splendid bass here, and the writer has spent many an evening there, coming home loaded, not with Brosmer's beer, but with handsome black bass. Bait can be had on this level at the lock-house opposite the brewery. If the fisher goes up the west side he can bail the lock-house from the high embankment near the brewery."

"The Minetto Battle Island level is, however, the favorite reach on the west side of Fulton, if not on the whole river. Minetto is the point to take bait, and from there up to Battle Island—four miles—it is one constant succession of bass beds, that give the angler the most delightful sport. Here the river is in all respects lovely, and the scenery is simply enchantment. No wonder is it to us that that part of Oswego River has become famous, and that lovers of angling and of the beautiful in natural scenery come from all quarters to enjoy it."

"At Minetto there are plenty of boats and oarsmen. 'Wash.' Rowland, the king fisher of the river, lives here, and he has now five or six of the best fishing boats ready to drop into the water on Monday. Henry Rowland and his son also have boats and oarsmen, and are ready to meet any emergency."

"From Battle Island up to Fulton there are some 'bars,' but not many. When you go to Fulton, however, you come to good fishing, as some of the men who work in the Oswego Falls factories, and who throw a fly with skill, can testify. There are boats to be had at Fulton, in which you can whip the stream up to Ilionville, passing the ruins of the old horse shoe dam, among the sunken beams and walls of which, we have no doubt, there are at this minute hundreds of black bass, and a trout or two, and a large one. Above Ilionville is the famous 'bar' of a last of nearly half a mile in length, where the fly-caster never fails to get many a 'rise.' The season of 1883 is now imminent. We believe it will be a lucky one, and that there will be a 'heap of enjoyment' on the Oswego river this summer."

## A TOUCHING CHRONICLE.

A KIND-HEARTED correspondent sends us the following story, which has been printed in a local paper, said to have been related by ex-Police Justice Scott, of Kingston. The Judge is in the habit of spending a few days each summer at Milford, Pike county, Pa., where he takes many and large fish, for he is a potent man with an angle. The following is one of his experiences:

"One dark I came out at midnight with my gun, and on shedding tread," said the Judge. "A party of us was camped twenty miles from Milford, in the wilderness. Our tent was pitched near a trout stream. We went for trout and woodcock. We'd had terrible bad luck, although some of the fellows with me were about the best sporting ducks in the country. One day I stayed in camp while the others went out fishing and hunting. I was stretched out on the grass in front of the tent, when I saw a small animal head up out of the creek. It looked around cautiously, and then crawled up the bank. It was a mink, and a steel trap was fast to one of its fore legs. I raised up, and the mink dragged itself right toward me. It stopped every few seconds, laid its head flat on the ground and looked at me with the most pitiful look I ever saw. I first thought I'd shoot the mink, but I couldn't. My mind wandered to what its strange actions meant. The mink crept on to within two feet of me, and turning over on its back laid up the paw that had the trap on it. There was no need of its saying a word if it could, for the action said as plain as possible, 'Please, now, take this trap off won't you? You bet in less time than it takes to tell it I had that mink free from its cruel encumbrance. Its eye spoke volumes of its distress, and it hopped back to the creek and disappeared."

"The incident slipped my mind in a short time. The boys came in late in the afternoon. They had about a dozen little trout and three woodcock. There wasn't enough to make a meal in a frying pan. We made up our minds that all the trout we'd have for breakfast would be a hunk of salt pork. We turned in that night all in low spirits determined to begin the next morning to get a piece of sunrise in the mountains that I'd read so much about. There was a big flat rock on the outside of the tent, near the entrance. When I stepped out and my eyes fell on the rock I was startled, and no mistake. The fact of the matter is, we were all afraid of rattlesnakes, and had with us a festive demijohn of brandy. I saw the mink, and I saw it with these old bastards, and when I saw on that rock, as plain as day, a pile of the biggest trout I ever set my eyes on, I thought maybe my nerves were a little off. I went back and woke up Baltus Westbrook and asked him to come out and see if there wasn't a bear track along the edge of the creek. Thinks I, if Baltus don't see them trout, I strikes in for Milford and a doctor. When Baltus stepped out of the tent the first thing that he saw was the rock. He jumped about ten feet and fairly yelled:

"'Trouf, by the living jingo! 'Where did you catch 'em, Judge?'"

"I was saved, but where the trout came from was the mystery. I suggested Providence, but happened to remember the section of country we were in, and knew that couldn't be. There was no way in which the trout could have been so good. We didn't let our speculations as to the source of their supply interfere with our appetites, and there was no salt pork fricé that morning. The episode raised our spirits, and we concluded to stay another day. We had good luck gumming that day, and when we found another pile of big trout on the rock the next morning we made up our minds that some bark peeler to whom we had given supplies the day or two before were repaying us with these old bastards. But I made up my mind that I would find out for certain. So that night after the rest had gone to sleep, I crawled up to the door of the hut and peered out. It was a bright moonlight night, and I could see almost as well as if it was day. About midnight I saw something black emerge from the creek. It came stealthily toward the tent. It was a small animal, and as it came near the tent I saw that it was a mink, and that it had a trap on its mouth. It hopped back to the creek, it deposited on the rock and then limped back to the creek. Everything was as plain as double six to me now. The mink that I had rescued from the trap was showing gratitude by catching the largest trout it could find in the creek, and placing them at my disposal."

"I told the boys next morning. Baltus Westbrook thought it was very kind of the mink. He said he'd never seen no mink before, and he thought it was a very poor opinion of it. That day we concluded to break camp and go home. One of the party had taken a young dog out with him to give

him some training on woodcock. At the first fire of a gun the dog made for another part of the country, and we never saw or heard of him again. When we packed up our things, we couldn't find the dog's chain or the collar it was fastened to, and we started on without it. I was walking out of the woods behind the wagon. We hadn't gone more than a hundred yards away from camp, when I heard a noise behind me. I looked back. There was that mink, flapping his my back. He had the dog collar around his neck, and when I turned around, he raised up on his hind feet and held the chain up to me with his fore paws. That mink was so blame grateful to me that he wanted me to take him home with me. It touched me to the heart. I took him in, but, poor fellow, the trap had injured him so badly that he died of lockjaw."

#### PHILADELPHIA FISH NOTES.

**BLUEFISH** appeared simultaneously on the different points of the New Jersey coast this week. Every inlet of any importance was thronged with them, but, as is generally the case, Barnegat showed larger fish than Little Egg Harbor inlet. The bluefish at the former place ran from three to five pounds in weight, and at the latter I told they were smaller. The writer last week (June 2), anxious to learn the exact condition of the bluefish in the Schuylkill and at the same time wishing to give a beginner his first lesson in fly-casting, took a boat at Flat Rock Dam and rowed up the river as far as Conshohocken, and on the route passed a number of anglers and found quite a number of fish had been taken during the day. Those a mile or so above Shawmont were quite large.

While casting along the shore for snubb for practice, I saw a Mr. Sellize, of Philadelphia, take a large, fighting fish and a half pound, and having left his landing net on shore, manage his boat with one hand, rowing in for the pot, while with the other he played the fish, and finally boated him, a very masterly feat to witness, I assure you. Mr. Sellize had several other bass he had taken during the day, and tells me all the fish he secures in the Schuylkill are from the river above the dam at Manayunk, about the locality I saw him, above Shawmont, and that the residents about the place do not know how to take the large ones, and hence resort to fish.

The last "haul" of the season with the big seine was made at Gloucester, yesterday, and it was stated by the captain of the smack which brought the final catch of ninety-five shad and a quantity of herring to Dock street wharf fish market, that the Gloucester shad fishing had been "cut off" for the season, although it does not end by law until June 10.

The take has been so poor this year, especially recently, that it was determined to wind up on the 6th. The highest catch was on the 14th of May, when 1,600 shad were secured, on the 8th of May, 1,200 were taken, and on the 15th of May, 950 were brought in. The lowest number caught any one day was 51. The season has been a very poor one both in quantity and quality.

Two small whales (black fish) were stranded last week on Peck's Beach, N. J., and the natives are trying out the blubber. Coal oil will be at a discount in that locality for a time. Could this have affected the late move in petroleum?

The rock bass should by all means be planted in the Eastern Pennsylvania streams, near Philadelphia, by the Anglers' Association of Philadelphia. It is not so palatable a fish for the table as the black bass, but he will take the fly more readily than his larger cousin, and is a game fly fish will reward oneself well. He will rise where the black bass will not, and grow to a fine weight, and no doubt many streams could be found where he would thrive. Are they not easily procured?

JENN.

**PERSISTENT POACHING.**—We are informed by Mr. S. V. R. Brayton, one of the New York State game protectors, that on the 28th of May he took from the Mohawk River two pipe nets belonging to a Mr. Wolf, a deputy sheriff of Waterford. As one net was in Albany county, and the other in Saratoga county, Mr. Brayton began an action against Mr. Wolf in each county. He says that Mr. Wolf has defied the law for three years, and has now begun an action against him (Brayton) for destroying his nets, and the latter has been summoned to appear at Saratoga on the 29th of May. Mr. Wolf is a lawyer, and says that his deputy sheriff it costs him nothing for counsel, and therefore the latter has an advantage over him, he having to give bail, which would trouble him. There is no protective association in either county, and he therefore asks for assistance.

**THE ROCHESTER WEST SIDE CLUB.**—The West Side Fishing Club, of Rochester, N. Y., held a meeting at the Bay View House on Thursday, June 7. Much successful fishing was done by some of the members during the day, and at the club dinner there was a full attendance. After the banquet the following officers were elected: President—Fritz Ziegler; Vice-Presidents—J. Bauer, Joseph Fleckenstein, Jacob Gerling, J. H. MacGregor, John MacGregor, Philo Black, J. Buchanan, James Cassidy, Y. Fleckenstein, S. S. Brewer; Recording Secretary—Charles Bernhard; Corresponding Secretary—Frank R. Swain; Treasurer—John A. Felsing; Master of Ceremonies—Charles R. Pimeganz; Committee of Arrangements—Joseph Haungs, L. Stadler, L. P. Steimes, H. Bertel, C. Mackley, J. Schreiner, A. Haungs, W. Bishop, George Munnack.

**WEAKFISH AND STRIPED BASS.**—Oceanic, North Shrewsbury River, June 5.—The weakfish are just commencing to bite. I took the first two this afternoon with crab bait. The New York Herald of Monday stated that only two ripe striped bass had ever been taken. Thirteen years ago I purchased a thirty-pound ripe female. This was in March. I am quite positive that this fish spawns in the spring. I think the spawning of this species of fish could be studied by the Maryland Fish Commissioners, as the harts of rock are at times very large at the mouth of the Bush River, Maryland.—WILD.

**MASSACHUSETTS GAME LAWS.**—The Massachusetts Fish and Game Protective Association have issued in neat and compact form a compilation of the laws and game laws of the State for the present year. The little pamphlet is so small that it can almost be carried in the vest pocket, and its general distribution through the State will do much to help on the objects of the Association.

**SALMON FISHING.**—The undersigned has some salmon fishing upon two of the best rivers in Canada at his disposal. Address at once "Salmon," this office.—ADE.

**HARD TO CATCH IN TEXAS.**—The turpans are never eaten here, they are so active that one is seldom caught; are made of fiddle strings, we think. As soon as they strike the bait and get fast they commence leaping high in the air, shaking their heads as a terror does a rat until entirely free from the hook and line. Although fishing in this bay during the summer months for many years, and having had them take my tackle almost every time out, I have never yet caught one.—CARONKAWAY (Galveston, Tex.).

**LAND-LOCKED SALMON IN NEW HAMPSHIRE.**—On May 18, Mr. B. F. Tappan, son of Attorney-General Tappan, of New Hampshire, took, on Sunapee Lake, N. H., a land-locked salmon weighing 61 lbs. This was one fish of Mr. Samuel Webster's plant of 1877.

**BLACK BASS IN LAKE ERIE.**—Erie, Pa., May 28.—The black bass season has been at its height here for the past week, and is still excellent. One man has caught from two to forty nearly every morning for the past week or two.—C. II.

**BLACK BASS.**—In the July number, we have an illustrated article on "Black Bass Fishing," by Dr. J. A. Henshall. The name of this writer is a sufficient guarantee that the sketch will be of a high character.

**NEW JERSEY.**—Oceanic, June 8.—3 P. M. The first small bluefish of this season are coming up the channel, not full fed, only caught one. 5 P. M. Just caught first bass (striped) trolling.—WILD.

### Fishculture.

#### THE AMERICAN FISHCULTURAL ASSOCIATION.

##### SYNOPSIS OF PROCEEDINGS.

THE annual meeting of the Association was held in the Farmer's Club rooms of the Cooper Institute, on Wednesday and Thursday, June 6 and 7, President Page in the chair. On opening the President said:

"A year has rolled round since our last meeting, and there are a number of things to be said about our work. It can be said with truth that, since the beginning of fishculture in the United States, there is no other branch of industry that has made such progress. It has spread from Maine to California, and from Minnesota to Texas, until nearly every State and Territory has its Fish Commission, and most of them have an appropriation to work with. These funds have been put in the hands of Commissioners, who give their time and energies to the work, and but few receive any compensation for other than the knowledge that they are doing good to their fellow men. It will be needless for me to go into detail in this matter, for I see before me men who have for years carried on the work in its broadest form for the National Government, and who are familiar not only with the work which they have been engaged in, but are also familiar with the whole literature of the subject, and know what fishcultivists in other lands have done. I might, however, be permitted to refer to the efforts in stocking waters heretofore made by the black bass, which has come to be known as the American game fish. In the West and in the South it is found in the creels of the angler and on the slabs in the Markets. They are now so abundant in the States of the West, that they are now so abundant that they were unknown a few years ago, that they can be bought in the markets at a price within the reach of the poor man. Coming recently from the interior, I had an opportunity of examining the markets in St. Joseph, Mo., and found among the marketmen frequent acknowledgments of the work of fishcultivists, and of the teachings of this Association, and a thorough knowledge of the fact that, if the bass are protected in the spawning season, they become like the country fishes everywhere, and tend to lower the price of other fishes. We who live on the shad rivers, mark the manner in which the supply is kept up, in spite of the increasing demands of a growing population. Col. McDonald has taken for his house a few thousand eggs in process of hatching at Mr. Blackford's Fulton Market, which he brought on from Washington to show the process. After they are hatched, they will be taken charge of by Mr. Mather, of the New York Fish Commission, and deposited in the Hatchery, where they will be raised to the number of one million a fortnight ago. Pardon me for relating a bit of my personal experience abroad: Happening in London at the inception of the plans of the Fisheries Exhibition, now in progress there, I called on Mr. P. B. Sars, Secretary of the Fisheries, and found that time it was not known that our Government would send a display, and by request, as there was only three days before the passage of the yearly appropriation bill, I called to Senator Fife, of Maine, on the subject, and also sent a duplicate message to the United States, and the matter was made bills trembling in the balance, yet in two days an appropriation was introduced into both Houses, and was signed by the President. Our exhibit at London is a most creditable one, and it is generally admitted that the United States were much favored. Another fact: Making the acquaintance of Sir James Maitland, of Sterling, near Edinburgh, I found that within seven years he had achieved great results in fishculture. He has hatched and reared 1,000,000 eggs, alone, without the aid of a report on the food and habits of the young, and assistance from any of his men. His expenses for the year cost sixty thousand dollars, and he has made fishculture a success in Scotland. Up to April, of this year, he has sold ten thousand dollars' worth of young trout and salmon, and his example has been largely followed in England, Ireland and Scotland."

The Secretary then read the report of last meeting, and the following new members were proposed: W. H. Schieffelin, Frank J. Burt, and Mr. A. L. J. Jones. His report was read favorably. Another fact: Making the acquaintance of Sir James Maitland, of Sterling, near Edinburgh, I found that within seven years he had achieved great results in fishculture. He has hatched and reared 1,000,000 eggs, alone, without the aid of a report on the food and habits of the young, and assistance from any of his men. His expenses for the year cost sixty thousand dollars, and he has made fishculture a success in Scotland. Up to April, of this year, he has sold ten thousand dollars' worth of young trout and salmon, and his example has been largely followed in England, Ireland and Scotland."

fish, kingfish, menhaden, and other small fish. In conclusion, Mr. Blackford stated that they were not prepared to draw conclusions from these examinations, because the time in which they had been conducted was so short. Another year they will have more data to draw conclusions from.

Mr. Fred Mather read a paper on "Snubbin' their Habits and Plans for their Destruction." He declared this fish to be a pest to fishcultivists. It was a voracious feeder and produced nothing but a mass of useless food for fishes, as its numerous spines made it a thorny mouthful. It ate worms, flies and insects, and thus became a formidable competitor for young, valuable fish, and it also devoured a young salmon. The snub made its nest near the shore, and June was its spawning season. Dynamite was first suggested as the best method to destroy this fish, but Mr. Mather thought that they could be more easily destroyed by dropping small lumps of quicklime into their nests.

Mr. Phillips then read a paper by S. M. Johnson, of Boston, on "Legislation for the Protection of Lobsters." It was briefly as follows:

The true sportsman angler, when he carefully releases the fingerling trout and returns it to the stream, intuitively recognizes the true economy of fishculture. With an application of this same law to lobsters great good might be done. By returning to the grounds all that are mature, and placing the limit so as to allow time for reproduction, a constant and sufficient supply of young lobsters would be secured. I think, can be accomplished in no other way. The results of this plan seem to be very generally understood, but the great difficulty in determining what good has been or may be accomplished arises from the fact that the laws of the different States are not uniform, and that moreover, they are often disregarded altogether, so that no satisfactory knowledge of the benefit derived is possible until these difficulties are removed.

It was suggested that all traps or pots be so constructed that the laths or sticks shall be sufficiently far apart to allow all small lobsters to escape, and that a funnel hoop shall be used of not less than five and a half or six inches in diameter. The disposal of the spawn-bearing lobster is an important matter, and worthy of careful consideration. The general opinion is that if the limit is large enough, a sufficient quantity would be included in the number returned to the grounds to provide for breeding necessities. The plan of having a closed season is frequently advanced.

The essay closed with a regret that lobsters are becoming every year scarcer and scarcer, and the hope that legislation would soon end this difficulty.

The Association passed a resolution at the conclusion of the reading of the paper that State legislation be urged to make provision for the preservation of lobsters, as suggested in Mr. Johnson's paper.

A recess was then taken and in the afternoon a very carefully prepared paper on "The Distribution of the Black Bass," by Dr. J. A. Henshall, was read, and elicited much discussion. The original habitat of this fish ranged from Virginia to Florida, and from Canada and the Red River of the North to Louisiana and East Mexico; it embraced the whole of North America south of the British possessions and east of the Rocky Mountains except the waters flowing into the Atlantic in New England and the Middle States. Of the two species, the large-mouthed bass had the widest distribution. The small-mouthed bass had a somewhat more restricted range, not extending east or south of the Allegheny mountains. The habitat of the black bass had been extended by transportation and by means of artificial canals. It had also been successfully introduced into inland waters, and was now occupying a wider range than any other fish in the world. The black bass was in a manner omnivorous. Crawfish and minnows were the principal food of the adult fish, and in addition to this they fed upon insects, larvae, frogs, etc. Mr. Ensign stated that he had protected a few hundred young bass into trout streams, where it would be sure to devour that game fish.

An interesting paper entitled "Food Fish and Fish Food," by Mr. Deacy, was then read, in which he advocated planting food for the fish when they were placed in ponds or streams.

##### SECOND DAY.

Col. McDonald read a paper on "The History of the Experiments Leading to the Development of an Automatic Hatching Jar." He traced the work of practical pisciculturists from its inception to the present time, and showed the various forms through which the hatching of fish eggs has passed. He demonstrated on the blackboard the different experiments which he had made by himself, and by others, in order to prevent the loss of eggs and to provide for the separation of the dead from the living eggs. The separation of the dead from live eggs he said, was formerly done by picking out the dead eggs, but now it is done by means of a sieve, and obtained such proportions that hand picking became impracticable. The syphon had been used, but this system did not prove satisfactory. Noticing that the specific gravity of dead eggs was less than that of live ones, Col. McDonald had devised a method of hatching jar the water in which the eggs were placed in egg-shells and also the young shad when hatched. This jar in shape resembles the glass flasks that are seen on the shelves in apothecaries' stores, but with a rounded bottom. The water in the jar was kept at a certain level, and the bottom of the jar. Another tube passed about one-third of the way down. The jar is half filled with shad eggs, and the water is forced through the long center tube, causing a violent revolution of the contents. The live, healthy eggs immediately fall again to the bottom, while the dead lighter ones are thrown up and forced by the current through the other tube into another jar.

Mr. Fred Mather read a paper called "The Transportation of the Great Water Cucumber," in which he advocated ending them packed as fish eggs.

A paper of great interest, by Dr. T. Garlick, on "The Beginning of Fishculture in the United States," was then read. It was a well-attested paper, and it was very interesting. It was listened to with great attention. He drew diagrams on the blackboard and illustrated the principles of the construction of the new fishway. Among other things he said: It is a well-attested fact that the river fisheries of the Atlantic States have steadily diminished in value and importance, and, as a consequence, probably have concurred in producing this decrease. First, the capture of the greater portion of the run each year may not have left sufficient to maintain production under natural conditions. Second, the construction of dams and obstructions in the rivers has, in some cases, entirely cut off the run of fish from their spawning grounds. The remedy for this condition of things is to be found, first, in such legislation as will permit an extension of the season, and second, in the supply by artificial propagation and planting; third, in extending the area of breeding and feeding by overcoming natural obstructions by means of fishways. Fishways are various devices for enabling fish to surmount obstructions which otherwise is impossible to them. A fishway to be effective must fulfil certain conditions. First, it must be accessible; that is, the foot of a fishway must be so located that the fish may enter it. Second, it must be such that it may receive a sufficient volume of water to attract the fish. Third, the water must be discharged with such velocity that the fish may readily enter and swim up it. In what is known as the step fishway or pool-and-fall fishway, the water is brought down from its elevation in a series of short, steep flights, the height of each of such a size in comparison with the volume of water entering them as to bring it practically to rest after each drop, and in this way to deliver the whole volume at the bottom with a rapid acceleration than it has in dropping from one pool to the next.

SYRACUSE, N. Y.

# AMERICAN Kennel Register.

A monthly record of kennel events for the information and guidance of breeders, exhibitors and owners of all breeds of dogs.

Its leading feature is the "Pedigree Register," of sporting and non-sporting dogs, which makes it the only complete Stud Book issued in America. A register number is given to each dog, and an index will be compiled at the close of each annual volume, thus forming a permanent work of reference. The pedigree registration fee is twenty-five cents. The first two numbers of the Register contained the pedigrees of 138 dogs.

Departments are also provided for the registration of stud visits, dogs at stud, births, sales and transfers, dogs at sale, and deaths.

Prize lists of all the American shows will be given, with descriptions of the principal winners and dogs exhibited; also prize lists of important shows abroad. This department will include a record of field trials. The first two numbers of the Register contain prize lists of Washington, Ottawa and Pittsburgh shows.

The publication day is the fifth day of each month; and nothing can be received for publication later than the first day of the month. All matters intended for publication should be in the hands of the editor at the earliest practicable date. Entry blanks for each department will be furnished free on receipt of stamped addressed envelope.

TERMS.—Issued by yearly subscription only. The subscription price is one dollar per year. Make drafts and money orders payable to the Forest and Stream Publishing Company. Address, AMERICAN KENNEL REGISTER, P. O. Box 2,832, New York City.

ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages the journal furnishes each week a larger quantity of first-class matter relating to angling, shooting, the kennel, and kindred subjects than is contained in all other American publications put together.

## GAME SLAUGHTER IN THE WEST.

INFORMATION from authentic sources makes it appear that the Game Protective Association of Wyoming is not doing the good work that we had hoped to see performed by it, and which the list of its officers and the tone of its inaugural address to the citizens of the Territory, warranted the public in expecting. In two essential particulars complaint is made that there is a failure to take necessary steps to punish violators of the law.

Some years ago the rapid decrease of the beaver within the Territory induced the passage of a law protecting these animals for a term of years, and forbidding their capture under severe penalties. For two or three years this statute was well observed, but during the past winter it has been openly violated, and the Wyoming newspapers have at frequent intervals contained local items like the following:

"John Smith has been trapping on the Labonté and neighboring creeks, and has brought in forty beaver as the result of his season's work."

"Peter Jones killed two beaver last week near the head of Rock Creek. Beaver are scarce there now, and Pete was lucky to get these."

Items such as these have had sufficient currency in the press to have attracted the notice of the officers of the association, and it would seem that by a little effort some one of the numerous law-breakers might have been brought to book and punished. A single conviction would have put an end at least to the open violation of the law, and would have greatly increased the respect in which the society is held by the public. The protection of the beaver is not less important than that of game animals, and we hope that the recurrence of another trapping season will find the officers of the Wyoming Association so far on the alert, that any open violation of the wise act in regard to this great rodent will receive prompt punishment.

During the past winter not a little elk skinning has gone on in the Territory. The law forbidding the sale of hides

has been evaded by transporting the skins by wagon down to Fort Collins, Col., where they are readily sold. It is true that the elk and the blacktail deer and the antelope are not slaughtered in anything like such numbers as they used to be a few years ago, but this is the result more of the scarcity of the game than of any respect felt by the skin hunters for life or law, or any apparent efforts on the part of the Wyoming Association to stop the butchery. We have no desire to be hypercritical nor to belittle the difficulties of enforcing the law in a country where the conditions obtain which are found in Wyoming, but we do wish to see the fast disappearing game of the Rocky Mountains protected from the skin hunter. We know (few men better) that it is simply impossible to prevent the slaughter, except by closing the markets, but the wagons which carry the butchers' spoils to Fort Collins pass through or close to Laramie City, and so the traffic ought to be detected and stopped. If, as was at one time hoped would be done, the stock men all over the Territory would take hold of this matter of game preservation in earnest, they could, in a very short space of time, make the butchers and illegal trappers feel that their shameful business was a dangerous business as well.

If anything is to be done for the game it must be done speedily, for each year shows more plainly than the preceding one that the big game of this continent is doomed. Only in the Yellowstone National Park, if the United States officials do their duty, has it any hope of surviving the ruthless persecution to which it is constantly subjected.

ONE OF THE FOOLS.—A correspondent writes to us that, misled by the glowing but false representations of a contemporary, he forwarded some time ago the fee for membership in a certain Western hunting club, and received from the officers promises of information and assistance in a proposed expedition to one of the Territories. Since the receipt of the acknowledgment of his money, he has had no further advice from this so-called club, and he now asks whether there is any means by which he can secure the return of his fee or in any way obtain satisfaction. We presume not. This is evidently a case of the "fool and his money soon parted," and we confess we have no sympathy with the fool. A man who has not intelligence enough to use ordinary prudence in dealing with strangers, deserves to be plundered. It is from the ranks of this class of simpletons that the unfortunates are drawn who become the prey of the "bunco steers" and "sawdust men," and those, scarcely less silly people who answer catch-penny swindling advertisements under the impression that while all the world beside will be duped, they will be dealt fairly with. How anybody outside of the walls of an idiot asylum can be imposed upon by the shallow devices of these sharpers is very mysterious, and yet the rascals, if we may trust the frequent exposures of their practices by the newspapers, make a fat living off the world at large. It may be set down as a true principle, that in the long run all attempts to get something for nothing will prove failures. All things have their price and are worth what they will bring, and any effort to obtain them without rendering an equivalent, whether it be in money, in labor, or in marketable goods, is a clear violation of the most self-evident principles of political economy.

THE ANNOUNCEMENT of the capture of a hooded seal on the New Jersey coast, and its exhibition alive for nine days at the Zoological Garden in Philadelphia, will be a matter of great interest to many of our readers. Mr. Brown gives in another column some valuable notes on the subject, though the death of the captive precluded any lengthened observation of the habits of the species in captivity. The hooded seal is known among sealers as the most ferocious and difficult to capture of the species commonly found on the North Atlantic coast, and the Philadelphia specimen, even though so young, appears to have shown the usual temper of its race. We learn from Dr. C. H. Merriam, whose name is familiar to all our readers, that during a recent cruise which he took on a sealer along the Newfoundland coast, and among the ice fields off Labrador, he found this species quite abundant. He secured during the cruise 120 specimens of seals, most of them *Cystophora cristata*. Mr. Brown is to be congratulated on having secured for his collection so uncommon a species of seal. And the bringing together of the hooded seal and the sea elephant—two rare and closely related forms, yet from such widely separated localities—was a piece of great good fortune. We shall look with interest for Professor Chapman's paper on the anatomy of the present specimen.

## THE WIND-GAUGE QUESTION.

THE wind-gauge question is the one drawback upon the prospects of the American team, so far as its preliminary practice is concerned. It was thought that the Wimbledon rules might be construed into keeping the American team men from practice during the Wimbledon meeting, but the discussion at the spring meeting of the members of the British Rifle Association further showed that the rifle-men of the visiting team using the screw wind-gauge had little prospect of admission into the many matches at the great meeting.

The speaker, at that meeting, who urged that the utmost liberty should be given the American team, was silenced by the remark that as the Americans had not made a formal demand for the use of the screw wind-gauge, therefore it was evident that it was a matter in which they had no interest, and that it was a matter of utter indifference whether or not the rule prohibiting the use of such wind-gauges was enforced at Wimbledon.

The speaker should have remembered that it would hardly have been courteous for the visitors to look ahead in this way. It is known to the British Council precisely what sort of weapon the Americans have prepared for the match, and it is known that they will wish to practice with these arms as much as possible upon the very range and at the very firing points from which the final match is to be fought. If such privilege is not accorded them, they will go into the match handicapped to a certain extent, and certain very invividious comparisons will be made with the treatment which the British team received a year ago. At that time Creed-moor was thrown open fully and freely to the visitors. They fired over the same ground which was to be used in the final match, and no restriction of any kind was placed upon their use of the range.

The American team in England would like the privilege of getting all the shooting possible over the Wimbledon ranges during the fortnight of the general competitions. It will not do to say that the pool targets are open to the general marksmen on the range. The exercise at the pool targets generally consists in standing for an hour or more in line, and then hurrying through a few shots, so that the value of the shooting, so far as making any acquaintance with the range is concerned, is about nothing.

If the full value of the fortnight's stay at Wimbledon is to be gained by the Americans, it must be by the right to enter without hindrance all the several military breech-loader matches. In this way, too, the English rifle-men may learn something from the methods of the Americans, and there certainly will be cultivated a good fellowship between the Guardsmen of the two countries, which is after all no small part of the permanent benefits of an international match.

We beg our English friends to disabuse their minds of the idea that the American team are indifferent over the fact that the Wimbledon programme, as it seems to be arranged at present, shuts them out of many of the most valuable practice matches, and if this exclusion is kept up, it will do much to weaken our present faith that the match is to be one of a fair field and no favor.

THE MEN who sailed on Tuesday in the steamer Alaska to compete with the best rifle shots of Great Britain, went off in good health and spirits, accompanied by the cordial good wishes of a large throng of spectators. Although no predictions can as yet be made as to the probable results of the contest in which they are to engage, it seems certain that the prospects for victory are far better than they were at this time last year. We have every confidence that the men will do their best, and the arm with which they are equipped has shown that it can do most accurate work. With which ever side the victory may rest, it seems likely that the scores on both sides will be very satisfactory.

PLENTY OF BIRDS.—Private advices from several of the Western States speak most encouragingly of the prospect for the fall shooting. It is rather too early yet to predicate much upon such reports, for a great many things may happen in the two months that intervene before even the prairie chicken shooting opens. Still it is satisfactory to learn that in many sections the birds wintered well and have had favorable nesting seasons.

GAME PROTECTOR NEEDED.—The need of a game protector for New York city, and one for Long Island, is every day more apparent. Will not the State executive help the sportsmen to protect the game and fish?

## THE ICHTHYOPHAGOUS CLUB.

THIS famous club will have its fourth annual dinner at the Manhattan Beach Hotel on Tuesday, June 26. The invitations, requesting members to assemble at the time and place named at 6:30 P. M., have been issued. These say that the club will meet "to discuss the qualities of many rare and excellent fishes, as well as of some less prized but not less toothsome mollusks, reptiles, and denizens of the deep, interspersed with such due admixture of familiar flesh and fowl as may sustain the strength of the least adventurous, and satisfy the yearnings of the most fastidious."

We fear that this indicates a backing down of the club from the high ground it has occupied, as it certainly intimates that it is about to make concessions to popular prejudice by introducing into its feast a "due admixture of familiar flesh." The club has claimed to be a medium for introducing to the public certain inhabitants of the water, as well as "denizens of the deep," which may prove to be wholesome food, but against which there has existed an ill-founded prejudice because of a lack of beauty in either their countenances or in their general appearance. In this good work they have had the moral support of those who look beyond the surface of that vague science called political economy. The club has introduced to public notice the despised skate, which is now occasionally sold in the markets, but which was long tabooed for no good reason. The skate is largely eaten in Europe, but not being in fashion here, our poorest people would not touch it because it had the reputation of being uncleanable, and, as a consequence, tons upon tons of this very good fish are thrown away every week, while thousands of people in New York are in want of a dinner.

The new departure of the Club is to be regretted because the average man will decline water snakes, snails, angle-worms, and shark's liver, when the menu contains "familiar flesh and fowl," and so the usefulness of the club may be greatly impaired. We hold that a member of the Ichthyophagous Club is bound to slake all inherited prejudice, and eat every living thing which the waters produce, even including those vague and possibly horrible things described as "denizens of the deep." To this end each member should insist that there be no "familiar" dishes, and that every other member and guest should eat of every dish that is served, in order that the public may know what is good and wholesome. If by any chance a few of the members should die from the effects of some poisonous monster's flesh, then those members' names should be inscribed upon the roll of honor, and pass into history as those who have died to benefit their fellow men. Certainly no one can accuse those brave men, who have unhesitatingly swallowed hellbender steaks and fried sea-snails, washed down with octopus soup, of being afraid to carry on the war against prejudice through any fear of personal harm. We certainly do not; we know too well the stuff that they are made of, to suspect that the proposed concession is at all dictated by personal considerations, and feel sure that had they been among the grenadiers of Frederick the Great, when their comrades hesitated before a charge which looked hopeless, and their king rode in front and asked: "What! do you fellows want to live forever?" they would, with one voice, have answered: "No."

Reading between the lines of this invitation, we see only a desire to please the new members, and perhaps to cheer them on by devouring the mysterious "denizens" before them, while they (the new members) content themselves with "civilized" food until they can screw their combined courage to the sticking point, and gradually arrive at the point when all pre-conceived notions as to what is edible have vanished, and the effect of an early education which was filled with prejudice, is partly or wholly gone. All have heard of the honor that is due to him who makes two blades of grass grow where but one vegetated before, but we think that an equal amount of merit should attach to those who teach us how to use what the earth or the waters provide, especially such things as are thrown aside as not fit to eat, when no one has tried them to find out whether they are or not. The fact that our grandfathers did not eat certain things is no reason at all why we should not test them, and a broiled "toad-fish" may be equal to any other fish, for all that the fisherman, who catch and throw them away, may know. The fishermen of Connecticut will not eat sturgeon, the royal dish of England, and yet they eat lampreys which the New Yorker turns up his nose at. Neither of these persons have tasted the fishes in question, nor would they do so unless under compulsion.

It might be well for the Ichthyophagi to consider the propriety of having different degrees among the memberships, and to mark these degrees by divisions at the table. For instance, a new member sits at the foot of the table, and notes are taken of the dishes of which he partakes. If he goes through with the muskrat stew and the toad-fish, he is admitted to a higher seat at the next feast, when, if he devours his water snakes and fried angle worms with gusto, he is promoted to be a brother in full standing. We are glad to learn that the old custom of the club of holding a new member on the floor and inserting repulsive "denizens of the deep" one after another down his esophagus with a pump, has been abandoned. This course only produced nausea in the strongest stomachs, and in several fatal cases the corners strongly condemned the practice. That was one extreme, the new departure of pandering to prejudice is another. The true method of inducing the novice to eat of the unusual viands lies between the two.

Those of our readers who would like to unite with this body of philanthropists, may have an opportunity of joining the martyrs to nightmare and dyspepsia by addressing the officers of the club, which are, as given on our invitation, as follows: President, John Poor. Executive Committee—Eugene G. Blackford, Robert B. Roosevelt, Fred Mather, Charles R. Miller and Barnet Phillips. We hope that all who propose attending this fourth annual dinner will notify us where we may find suitable data for an obituary notice, as we already have on file complete ones of the older members in readiness for any emergency.

FOOD AND SPAWNING OF STRIPED BASS.—In the proceedings of the American Piscicultural Association, in another column, will be found some notes on the food of the striped bass, by Prof. H. J. Rice, and also some account of the successful hatching of the fish, by Mr. S. P. Worth. The bass has been hatched in very limited numbers, just enough to experiment with, for years, but the pisciculturists have found where they spawn, so that they can be obtained in quantities. Mr. Worth is the first to obtain the eggs in large numbers.

JUNE WOODCOCK.—A correspondent writes us that at the Manhattan Beach Hotel, at Coney Island, John Breslin proprietor, he saw a few days ago twelve woodcock—small young birds. Will Governor Cleveland give Long Island a game protector?

## The Sportsman Tourist.

## SPORT IN CALLAO BAY.

IT may be of interest to some of my fellow-readers of FOREST AND STREAM to learn a little of life, from a rod and gun standpoint, in this quarter of the globe; and on that supposition I give you a few bits of experience from the lives of a friend and myself, who are in temporary exile in this dreary spot, and who are forced to devise all sorts of expedients to prod dull time along.

On account of the present military occupation of this unfortunate country by the Chilians, which precludes all possibility of getting into the interior, my experience has been confined entirely to the coast, and, indeed, to a very limited extent of that. From all accounts the upper plateaus of the mountains, fifty or seventy miles inland, abound in game of great variety, and, barring the rarest atmosphere, it is easily bagged. Properly speaking there is no game at this point on the coast, unless an occasional flock of bay birds, with a stray curlew or two, may be so denominated. But to my yarn which, though it has little to do with game, does deal to a slight extent with fishing line and rifle.

To premise I state that our present home is on board the United States steamer —, at this time lying at anchor, close under the lee of the island of San Lorenzo, some four miles southwest of Callao. I make this reckless statement with a full realization that it will be apt to blast my reputation for veracity among those acquainted with the present state of our navy; but, if necessary, I can produce affidavits to prove that I am not a liar, and will condemn me without previously investigating the case.

Having stretched your imaginations sufficiently to grasp this fact, please consider us in strict quarantine, greedily willing to receive anything in the fresh fish line capable of being eaten, and you have our exact status.

The doctor and I, being the only officers on board who were fond of fishing, notified ourselves on the altars of our respective gods, and thus we volunteered to daily sallies forth with hook and line, in search of what the sea might yield us. For a fishing ground we chose an old launch, anchored near the island shore, in some three fathoms of water, and thither, with hand lines (neither love nor money will purchase a rod in Lima or Callao), we daily repaired and caught large quantities of fish, called by the natives "cabrilla." They are a fine food fish, weighing from one to three pounds each, and outwardly much resemble the ordinary fresh-water perch. We also caught mackerel, eels and various other fish, mostly useless for table purposes. Every day while fishing, we lost several hooks and parts of lines, which were carried off by some immense fish, whose movements, when hooked, were as uncontrollable with our light tackle as would have been those of a locomotive. After a few days this naturally grew a little monotonous, and we determined to try and get a glimpse of the creature that was apparently amusing himself so highly at our expense. We, accordingly, each procured a large cod-line, to which we fastened three heavy hooks, and half a pound of lead. These machines we baited with a good-sized mackerel, and let the bait lie close to the bottom along the launch. We took the precaution, luckily, to coil down about 100 yards of each line in the launch for the time being.

The second day of the trial of this device, just as we were winding up our light lines for the day, and when the bottom of the launch was well covered with flapping fish and squirming eels, the Doctor's big line started over the side for Callao at about fifteen knots an hour. He made a wild grab for it, missed it, fell down in the bottom of the launch, recovered himself, spit out a couple of stray eels, and a good deal of strong language, and finally got hold of his much-needed line. He has ever since wished that he had fallen down again, for that line was probably the worst thing he ever got hold of. The Doctor is not of a prevaricating disposition, and when he took firm hold of that line and excitedly shouted, "I have got him," he doubtless thought he was telling the truth; but it was but another version of that old, old story of the man and the bear, and he only kept up communication with the terminus of the line long enough to get two of his fingers out and in toward the boat. He let go, remarking with a good deal of unnecessary force, "The d—n beast can go to — Cotopaxi." Whether or no the occupant of the far end of the line heard this expression, I cannot say, but I presume it did, for it immediately stopped, doubtless to give the remark due consideration, and to cogitate upon the feasibility of taking up the liberal course of travel, opened up for it by the Doctor's quaintly worded remark.

The sudden stoppage of the line caused us both to think that our game had escaped, but a cautious pull satisfied us

that his flag was still there, and as it showed no signs of immediately renewing the fight, we prepared to do a little work on our end of the line. The fish was on the Doctor's tackle and the place of honor belonged to him; accordingly, having duly fortified his hands with a pair of gloves and some old junk, he declared himself ready to begin offensive operations. Fearing our customer would foul the anchorage of the launch, we got into a small boat alongside, the Doctor handling the line very gingerly during the transfer operation. When all was ready I took the oars and rowed gently in the direction in which the line trended, the Doctor meanwhile taking in the slack of the line and coiling it carefully down in the bow. When he had got in about seventy-five yards he found it about up and down. He then braced himself ground out the line with a "big brute," for cutting my fingers," and gave a yank on the line that would have fairly staggered a bull. It was sufficient. The fish evidently thought a young earthquake had generated right under it, and accordingly started for a cooler clime, but in making calculations it forgot to take into consideration the new ties it had so recently formed, and was forced to stand upon the order of its going. The Doctor had his blood up now, and out the line went. The fish, however, was not fifty pounds pressure. Even with this strain on the beast had it all its own way for a long time, and towed the boat backward and forward like a cork. When the brute tired of this kind of fighting it began sulking. It would lie on the bottom and would not stir more than a few feet, jerk and pull the line as we would. Whenever it did move the Doctor worried it as much as possible, and finally, some forty minutes after the battle began, our fish came to the surface about twenty feet from the boat. As soon as it broke water our curiosity was appeased, and we saw that our line-breaking, hook-stealing friend was one of the ray tribe. We thought it had given up, but it was apparently satisfying its curiosity also, for as soon as it saw the two objects it was fast to it made a desperate rush for liberty. That was his last fight, for the next moment he was gone, and though extremely violent, did not continue long. It came to the surface again and again, and we shortly had it close alongside the boat. I told the Doctor to keep a taut line on, while I took a knife, with a ten-inch blade, and prepared to give the beast a death-blow through the brain. Our scheme of annihilation was very well planned, but "The best laid schemes o' mice an' men gang aft agley," and when I, with a quick stroke, struck the spot, the fish, with a low blow, the brute, with a tremendous splash, moved off a few feet, and I rammed that knife countless fathoms down into the bright blue waters of Callao Bay. I stretched my temper further than I did my arm, but, although I shortly regained my usual sweet disposition, my right arm is still several inches in excess of its normal length. You can, perhaps, imagine the blissful satisfaction I experienced when, shortly after my mishap, I succeeded in cutting that knife (with my left hand) into a fatal spot in our quarry.

The Doctor thought my accident very funny, and did not get over his hilarity till he began surveying his capture. Then the overwhelming knowledge of his own puissant prowess so overcame him, that he would not deign to notice so insignificant an individual as myself. I felt my own inferiority, and accordingly made good his hole, and went ashore, to be what on the island. There the fisherman, from the water, by means of a crane, and deposited on a small hard-car, whence it was removed to the scales at the smelting works adjacent, and found to weigh 81 pounds. The Doctor, whose fishing experience had heretofore been mainly confined to trying how far he could throw a three-quarter-pound bass through the cerulean atmosphere of a fair day, by means of a root catch, was now completely overcome by the weight of his own lauricels, and fully realized that, unless I wished to everlastingly forfeit his regard, I must catch a fish weighing well up in the double figures. So the following day I girded up my loins and sallied forth to redeem my lost position. The Doctor condescended to accompany me, but the expedition was a barren failure, as my life was greater than the hole was to me. The day succeeding that, however, fickle fortune smiled upon me, and I succeeded in hooking two rays. The first one got the line foul of the buoy anchorage before I could get him under control, and soon broke away. Shortly after I hooked another, and after about an hour's hard work, much similar to that described before, I landed the largest fish, by over a hundred pounds, that it has ever been my good fortune to capture. The fish, as you have seen, had dimensions were: From tip of nose to tip of tail, six feet two inches; from the extremity of one enormously developed pectoral fin to the extremity of the other, five feet eight and one-half inches; weight, 130 pounds. Its large bulging eyes, uncouth rhomboidal shape, and long flexible tail, gave it anything but a fish-like appearance, and made up a *tout ensemble* that was extremely hideous. The fish, I have been speaking of, gave a single spike at the base of the tail, and from the limited means at my command for obtaining such information, I concluded them to be *Raja triggon*.

If any of my readers wish to get information as to the edible properties of this fish, I refer them to Col. H., of the island. He, burning to make a discovery in gastronomy that would pleasantly astonish his fellow gourmands, had a steak cut from one of the rays, served it up, and the following morning was the first course at a breakfast to a few friends. His guests were not hunting for discoveries in that line, and, after being helped, they patiently waited for the Colonel's verdict on the newly discovered delicacy before bestowing their meed of praise upon his deserving head. He took a generous mouthful upon his fork, placed it where he thought it was going to do the most good, and, with an ecstatic smile, began munching away. The hole was quickly made to fade, and soon died away entirely. Then his face assumed a sickly green color, and remarking, "I am not overfond of rich pastry for breakfast," he left the room amid the roars of his guests. The new discovery was afterward tried upon a dog, but he, less reckless than the Colonel, would not even deign to put a bit of it in his mouth.

A short distance off the southern end of San Lorenzo there lies a small, barren, uninhabited island called Branton, where large quantities of sea lions daily resort to bask in the warm sunshine. This fact we had noted several times while out sailing, and had particularly observed one spot where they might be very closely approached under cover. This we resolved to take advantage of, and a few days since we made up a party of six, suitably armed, took possession of the ship's sailing launch, and got under way for our proposed fishing ground. As we intended to be gone most of the day we carried a loaf of bread, to stave off all danger of water famine, and the Doctor thoughtfully compounded a few mild prescriptions, in suitably labeled bottles, that gaunt hunger might be balked should he attack our jolly crew.

## Game Bag and Gun.

**GAME RESORTS.**—We are always glad to receive, for publication such notes of desirable game resorts as may be of help to the readers of *FOREST AND STREAM*. Will not our correspondents favor us with such advice?

### THE CAMP.

IT was the close of a hot dusty day toward the middle of August, that a party of adventurers lighted their camp on Elizabeth Point, on the eastern shore of Thirteenth Pond, a small lake just beyond the hither bounds of the great northern woods.

A group of four, all of middle age, men whose harsh hands gave token of daily toil, though they had left their cares and labors, turning their backs for a season upon the harvest field and the workshop, they had come hither for rest.

Their mission here was to give respite to muscles, long taxed, to divert minds from a constant unvarying round of cares. The location and arrangement of their camp showed that they were no novices at least in this branch of woodcraft, for their tent was pitched on a little timbered promontory commanding a view of the whole western shore of the lake, some three miles in extent, a rough and jagged mountain line coming down abruptly to the water's edge, indented here and there with sharp gaps between peaks that loomed darkly against the evening sky, and threw their black shadows now quite across the lake at their feet. An airy tent set with front toward the landing, formed an awning under which boxes of provisions and utensils were arranged for convenient use, four stakes supported the large square cover of one of the boxes for a table, towels hung from a line overhead, a bar of soap lay in a notch cut in the side of a convenient tree, and by the side of a huge log upon whose trunk one or two of the campers were sitting, gleamed a pile of coals which, fanned by the little gusts of wind now and then whistling up from the lake, threw out a genial warmth quite pleasant in the somewhat chilly evening, which in these forest wilds often succeeds even a hot day.

They had evidently finished their supper, for the tin plates and cups were neatly washed, arranged bottom up on the table, and, save a kettle steaming on the fire, a frying pan, coffee pot, and tea kettle, had been driven into the trees, conveniently near, no other utensils of cookery were to be seen, but a covered box adjacent to the table and now used as a seat, is strongly suggestive of being the corner cupboard of this forest kitchen. The party sat some time in silence, looking dreamily at the decaying fire, or watching as the darkening shadows close over woods and lake, till the sharp cut outlines of the opposite peaks become only the dark background of a dim, uncertain picture, growing more indistinct even under the eye of the observer.

But now an armful of dry branches thrown upon the fire sends up an inverted shower of sparks among the overhanging leaves, and soon a bright and cheery blaze brings into clear relief the figure of him who is evidently the chief cook of the party, as now stirring into great activity the crackling pile, or kicking back some straggling brand, he finally lifts with a knowing look the lid of the kettle, on the fire, peers for a moment into its steamy depths, replaces the cover, and turns his back to the fire with the remark:

"Well, boys, there's the foundation of our breakfast, anyhow, provided we can't do better, but I'm bound to try again to coax those stupid trout to bite in the morning."

An instant's pause—a deprecating glance at the dull smoky sky and, "It's up hill business, this confounded dry weather though." The speaker is the Knight of the Hammer, spare, muscular, square-shouldered, above the medium height, with a forehead and phrenological development combined with a quick decided movement that proclaimed him at a glance a master of whatever he undertook, now stood facing the others with the question, "R, did you notice how much below the mark along the rocks the water has fallen?"

He addressed a farmerlike-looking person, who replied familiarly, looking up for a moment from a breech-loading rifle which he was cleaning, and then with some casual remarks, resumed his work.

Seated on the box previously mentioned, with elbows on the table and his head resting on both hands in an attitude of deep meditation, was perhaps the most remarkable man of the party. Slightly round-shouldered, but with a chest both broad and deep, fully six feet in height, with massive limbs, somewhat untidy in manners and person, his strongly marked features and the accompanying head made up an organization that Fowler would, untouched, have pronounced one of great power.

Here was a man of signal ability, and one who, upon occasion, could rectify oars or swear oaths which his great prototype in words and deed, perchance in person, glorious old barbaric Ethan Allen, might have equalled but certainly never surpassed.

As was his wont when thinking hardest, oblivious to all surroundings, with ever and anon a monotonous whistle or humming so much of melody as might be dictated by an ear charmed equally by heavenly tones of Sweden's Jenny or discordant screech of Taunton engine, "The Battery" was ruminating deep in unknown lore, but whether of Newton, Euclid, or Blackstone the historian says not.

An animated conversation existed between the two at the fire, who were soon joined by the fourth and last of the party.

Taller than any of the others, the listless manner and languid step proclaimed the invalid. Gaunt, lean, dyspeptic and cross, Paul Devereux seemed but a sorry companion in a hunting camp.

Various topics were discussed—the procuring of a guide, prospects of getting deer, the locality and distance of other lakes, hopes of the war were expressed, and though the evening was well advanced and the party evidently tired with the labor of bringing in their "traps" and arranging camp, there was no indication of a desire for sleep.

It was plain that the party was not yet complete, and that they were expecting an addition of some sort, for their plans were not definite, and a listener could have heard occasionally an expressive "Well, we'll see about that when he comes," or "He knows the ground better than we do," etc. Conversation at last began to fail, the seat by the table was empty, but a pair of enormous long-legged boots projecting into the firelight at the front of the tent, and a steady rumbling snore of wondrous depth and power, starting a shade below double B flat, and rising a semitone or so under the fullest pressure, neither of which could by any

possibility have pertained to anyone, but "The Battery," accounted for the vacancy.

As conversation waned, the numerous sounds of the wilderness became audible, the chirp of the tree frog and cricket, the weary note of the circling night hawk and distant cry of the loon, the whole family of owls, each with a啼啼 but all served to fill the vast space otherwise left to total silence.

The fire had burned low, till just enough of light remained to render visible the thin wavering spire of smoke that wound up among trees, when a faint ticking as of oars in the rowlocks came up from toward the foot of the lake, at first scarce audible, but regular, and becoming gradually more distinct. "Coming from Bennett's Landing," says one. "Yes, but who is talking about on the lake now? Is it night as this?" "Why, it's darker than the Stygian Pool, and none too smooth at that."

"They are not steering toward us anyhow," said Paul, who was intently listening.

"How do you know?"

"Listen to the stroke and the echo, that boat is in the bay below Shanty Point, across the lake and a good half mile from here."

The rowing now ceased a moment, and was again renewed, not, however, with the light, one-handed movement of a boat at landing, but with a full sweep and a double stroke, as if the rower looked or listened a while and then pulled ahead.

It was decided to strike a light, and a few dry pine branches soon sent up a blaze that could hardly fail to be visible from that part of the lake upon which the sound proceeded. A few moments passed, and a distant, faint halloo came across the water.

Vulcan bellowed to his feet, "O. B. for a thousand," and an answering yell rang through the woods, over the waters, and was echoed back from the mountains beyond. Another halloo and its answer, and the air-strokes rang quick and clear again. "I thought I knew that yell, only it was a little out of breath. Well, I don't wonder that he is if he has pulled up from Bennett's Landing against the wind. Mind you, it blows out on the lake."

A lighted lantern was by this time down at the landing, and as the light streamed across the dark waters a whoop came back that left no doubt as to the comer.

"What in creation brought you here? I was looking for you on Shanty Point."

"I'll be damned, but bare as a fallow."

"Oh, ho, it is, eh? But this ain't good camping ground."

"Wait till you see."

As the boat touched the shore, out jumped a wiry little fellow, and with a mimic bow, "How are you all? happy to see you, how's your friends, wives and babies? wasn't looking for company this evening, hey? how I don't intrude, brought my knitting work you see." And he hauled a bundle out of the boat, had been scrambling up the bank toward the fire without stopping to look for the path, or waiting for the lantern to lead the way, all the while rattling his jokes, questions and comments, never waiting or caring for any answer either. Arrived at the fire he pitched his pack under the table and plumped down on the log with—"Hain't got no deer, no, nor trout either. I'll bet it, couldn't do nothing but come on, for I thought you had 'em, stacks of 'em, I'll show you how," and immediately began a discourse on hunting, fishing, and woodcraft in general, and of this locality in particular, telling of at least forty places on this lake where one could not fail of catching trout at any time, of more sure places for deer than the whole party could visit in a week, and interlarding the whole with seemingly no end of anecdotes of hunting adventures of his own, in fact from the time he first touched land, becoming the life of the party. During the latter part of this performance Paul had sat cross-legged on the log with his back against a tree, taking little or no part in the conversation but regarding the speaker, at first with an air of total indifference, to which succeeded a half quizzical smile as he listened, vastly amused in spite of himself at the animated stories and quaint jokes of O. B., who but for Vulcan, several times essayed to fling a fire-brand at him, as the little rascal declared "just to walk the poor devil up."

"Had a cracking shower at the Fort yesterday; rain any here?"

"Not a drop."

"Pity, can't catch no trout till it rains, that's certain. Say, I drove my mare from the Fort up since ten o'clock this forenoon, and not a wet hair when I got to Bennett's. What do you think of that?"

"Oh, well, that's nothing." This answer came from "The Battery."

"Oh, but I had a load in my buggy, myself and baggage, a bag of oats for my horse—by George, I forgot my corn or we'd have a roast—I had a sack of green corn, and blankets and so on; a load, I tell you. It's more than any of your old racks of bones can do."

This much of a hostile demonstration would draw the fire of "The Battery" at any time, and with a short pause it came.

"Ho—buggy? that straddle-bug concern I kicked across the canal by Vulcan's shop the other day, and you stuck on top of it like a flea on a 'granther graybeard. It's a pity if a horse couldn't make seventy or eighty miles in a day."

The little one roared with laughter, laying back over the log and kicking up his heels till his head nearly touched the ground, and coming back with a brisk snap on "The Battery's" knee, sprang to his feet, and started on a tour of exploration around the tent, exclaiming, "Let's see how you got it anyhow," pitching headlong over three gray ropes in succession without the least ruffling his temper, or stopping the string of comments rattling from his tongue, which seemed to run just as well when down as up, he soon emerged into light from the tent side, having made the circuit with the remark, "Pretty well, pretty well after all, most as well as I could have done it myself," to which "The Battery," by the fire, rolled up his eyes in geometrical astonishment, with a sub-bass growl of, "Thunder, hear him go it, forgot his corn, he hain't got none, too darned lazy to pack it down to the boat, I suppose, anyhow." The subject of the remark having finished his survey of the outside, he literally dove into the tent for an examination of its contents, and, finding nothing so much as a vigorous terrier in hot pursuit of a rat, he proclaimed the name and quality of each article, hauling out to the light whatever he could not determine by other means, whether it be gun, fishing tackle, wearing apparel, canteens or what not, and keeping up the while a running fire of remarks for the edification of the company. Suddenly, however, the hubbub ceased, and to the astonishment of all, even the irrepressible member no longer wagged

For an instant all went fault, but the silence was broken by Vulcan with, "Come out of that I say! come out of that, or I'll—"

What the threat might have been we shall never know, for the Knight seized a blazing brand and made a furious rush for the tent. As the light began to play about the entrance, there came a sound as of opening the valve of a lifted pipe under a heavy pressure, and the curtain being suction showed the occupant seated flat on the ground, by a box of "stores" tugging at his boot-straps as if trying to force the bottom out, and muttering in a strangely altered voice about "wet feet" and "that plaguy boat," "dry socks," etc.

Vulcan, however, was inerrigible, and proceeded to examine his treasures, when a package of Dr. Hatcher's famous "specific," which, in his zeal for the welfare of the party, the worthy doctor had with his own hands prepared, and with cords securely tied and safely packed for the journey, committed to Vulcan's charge with many and full directions for use, was found in a bad condition, strings broken and contents partly gone. Upon interrogation the accused stoutly denied all knowledge of the matter, declaring that the suspicious sounds must have been produced by pulling off his wet boots.

The lateness of the hour compelled the party to seek that sleep which was to prepare them for the morrow's work, leaving the question undecided.

The curtain was buttoned down, and wrapped in blankets spread above the beds of soft and fragrant evergreen boughs, the hunters forgot in dreamless sleep the labors of the day, its mishaps and its jokes, so also their anticipations of the future.

And now, though the pen of Paul hath even become rusty by reason of long disuse, the readers of *FOREST AND STREAM* may rest in the assurance that if the fates be propitious, they shall certainly, in due time, hear of the days that followed.

PAUL DEVEREUX.

### FLORIDIAN EXPERIENCE.

I HAVE just read with regret "Didymus's" scathing article in *FOREST AND STREAM* of May 24 on Florida, and the deceptive nature of the accounts of hunting to be had there. Without wishing to cast reflections on the writer's veracity or the sincerity of his opinions, I still do most severely condemn the article in its spirit and in its conclusions, as to the facts that State. I am not at present a resident of Florida, but from November, 1880, to February, 1882, I spent my time on Indian River, and conversed with gentlemen who had hunted the coast from St. Augustine to Tampa. From my own experience, and from the remarks of these sportsmen, I have formed an entirely different opinion of the sport and accommodations obtainable by genuine lovers of the line and gun. It is to be regretted that persons will go into a new country and expect such a style of sport and living as "Didymus" was looking for, and particularly is it to be regretted and reprehended, when such persons, not finding everything as easy and comfortable as at home, write for publication articles condemning at one sweep hotels, game, and the country at large. "Didymus" is not to understand that I am taking sides against him in his description of Central Florida. I admit that quail shooting in Central and Southern Florida is anything but first-class, both as regards size and disposition of birds and the country shot over. But I do take a stand in opposition in defense of the sea and gulf coast, where, with exception of St. Augustine, he does not seem to have gone. As the editor very tellingly explains "Didymus's" experience at St. Augustine, I say nothing but the truth in saying that I have been to Indian River and the surrounding country. For deer, bear, ducks and fish this river as nearly approaches the ideal sportsman's paradise as any other place one could find.

I am sure "Didymus" would have enjoyed himself here, providing always that he is prompted by a true sportsman's spirit to make the most of what he finds good, while bearing and excusing what seems unpleasant or objectionable to him. Unless one is prepared to do this, he had better confine himself to the other States, where he can easily find shelter from rain and sun, and where all disagreeable work can be shunted to the shoulders and hands of an attendant.

Leaving quail shooting out of the question, and that, by the way, can be found nearer home by us all; if anyone wishes first-class duck, deer or bear shooting, he can go to Jacksonville and take one of the daily boats to Lake Pinnett. There he can find semi-weekly boats to Lake Pinnett, a point on the St. Johns, opposite Rock Lodge, on the Indian River, distant about two miles, or perhaps by this time the new road from Enterprise to Titusville, on Indian River, is open to the public. Rock Lodge is twenty miles south of Titusville. If you go by boat from Sanford to Lake Pinnett, there will be rough riding for about thirty miles to Rock Lodge. But once there you will find yourself within reach of all the conveniences dear to a sportsman's heart.

The large, new hotel built in '81 by Mr. Wilkinson, of Richmond, Va., is kept up in the latest and most approved style, and here can be found boats for hire by the day, week or month.

If duck shooting is desired, cross the river in front of Rock Lodge to Mr. Cleveland. From there a tramp of two miles will take you to New Found Harbor, one of the finest ducking grounds of America. It takes rank with Currick Sound and the Chesapeake in that respect. No boat is needed. The shore is covered with small ponds, where the ducks congregate in immense numbers. Mallard, teal, widgeon, spoonbill are here, besides many other waterfowl. The hunter has only to take a stand by some hastily constructed blind, and he can have all the shooting he desires.

Deer are found in large numbers in the northern part of the Merritts Island. For deer, this island was at one time unsurpassed, but now they are found mostly on the prairie, back of Eau Gallie, a small post-office eighteen miles south of Rock Lodge, and opposite the southern point of the island. This prairie extends from Eau Gallie to the river, and back to the St. Johns, was once found there in numbers. My day's shooting was confined to the eastern shore, a narrow strip between Indian River and the ocean. One morning I shot three between eight and twelve.

Turkey are not found on the eastern side of the river, but in February and April are to be found in droves near Okeechobee.

If any of your readers wish fine sport with deer, bear, turkey, ducks or fish, let them go to Rock Lodge, and take a boat to Eau Gallie, opposite Indian River inlet. There, Mr. Jim Paine has a small hotel always open to sportsmen, and a table well supplied with game and fish. His brother Tom and he are both ardent sportsmen, and can put you up to all kinds of sport. Jim Paine was extensively engaged in tur-

the fishing when the writer was there, and some fine catches were just being shipped to Jacksonville. A rod is out of place here. Deep sea fishing is the thing, and off Indian River inlet, "trout," or as they are called there, channel bass, red snapper "trout," etc., can be caught without trouble.

In a word, in spite of what "Didymus" may say to the contrary, I unhesitatingly assert that if anyone will follow the above directions he will find as fine sport and good accommodations anywhere in the country. Indian River is worth the trip. It is the finest and most delightful stretch of salt water on the Atlantic coast, and if one is not disposed to hunt or fish he can find full enjoyment for himself at Rock Ledge, among the oranges, bananas and pineapples. Mr. Wilkinson has a fine store near his hotel, where a sportsman can find everything he will require; and Mr. W. himself, who is a most genial host, will I know take pleasure in giving all necessary information.

And North of Louisiana is a fine game country, and when our road is opened to the public, sportsmen will find this the most desirable hunting ground. Quail shooting that even "Didymus" could not complain of is to be had, and Lake Bristenau is a second New Found Harbor. The deer shooting is good. But my Louisiana experience must wait for another opportunity.

MINORS, LA.

J. A. B.

I went to Florida not as a sportsman, but about my employment, and without a gun. I have seen eight deer in one day, and in the same locality—the north line of Florida—not on the routes of tourists, I saw them daily. I carried the torch but one evening pot-hunting, and the result was two deer before nine o'clock. I was carrying the "target" on a survey for the United States, and I flushed three woodcock on one-half mile of line within fifteen minutes another day. As to the complaint about swamps, I would like to visit a larger one next winter than the Oklawaha, and I was six weeks within its radius. A good, staunch, portable boat and a man that is happy when he is lost would be the most agreeable associate for me in a locality like that. With a heavy shotgun and ordinary skill in the use of it, existence would be agreeable if we did find some sand. I do not think a few particles in the anatomy of complaining tourists would injure them. I love my mountain home, but the months of time I devoted to exploring the swamps of Florida now gives memory pleasant occupation.

COLLEEN, N. H., June 11.

NED NORTON.

## SLAUGHTERING GAME.

IF some of the wise men who write able articles concerning the slaughter of fish and game would only go a step further and tell sportsmen just how many fish they might take and how many birds they could shoot without endangering their reputation, we should know better how to conduct ourselves. I am, however, sometimes led to believe that some of these men who are so skillful with the pen as to write little when they get out with the rod and gun, it is a great deal better day when I can bag ten, and I believe it to be perfectly legitimate to bag fifteen if I can, provided of course that I can make use of the birds.

I like good company and I believe my shooting and fishing companions have been as good as the average, but I have never yet seen the man who suggested going home in the middle of the day when the trout were biting well or when the dogs were finding plenty of birds. But what is all this about? Can these fellows kill or catch anything themselves, and are they afraid the fish and game will be exterminated before they learn the art? If that is the trouble, they need have no fears. There will be enough left for them to practice on a long time yet. An old November partridge lasts a good while sometimes.

Again we hear and read a great deal about "pot-hunters" and "market-hunters." I am not a market-hunter. If I had hunted and fished for a living I should have starved to death long ago, but I have, in my lifetime, done that awful thing, sold game, birds, and trout. Now that I have ruined my reputation by this confession, I will go further, and say that I never could quite understand why it is not entirely proper for a man to sell the game he shoots if he chooses to do so. I can see no reason why a man should be more ashamed to take a dozen partridges to market than the same number of turkeys. I do not wish to be suspected as defending any man who takes more fish or game than he can make use of. I have no respect for him who takes fish or game only to consign it to the swine or manure heap, but if he obeys the law and conducts himself in every way like a gentleman, I can see no good reason why he should be accused of unsportsmanlike conduct simply because he has better success in shooting or fishing than his neighbor. K.

WORCESTER, JUNE 18, 1893.

## INDIANA LAWS.

Editor Forest and Stream:

I inclose you the text of two bills passed by the last General Assembly of this State. Both of them were adopted in the interests of the agricultural classes, but are approved by sportsmen generally.

In this county the commissioners pay fifty cents for the head of hawk or owl, but they refuse to pay anything for the scalp of a woodchuck, it being reported that one of the board—himself a farmer—has convinced the other members that a groundhog is a handy thing to have about a farm.

The Indiana wolf growers in State convention bitterly denounced the new dog law.

HOOSTER.

INDIANAPOLIS, Ind., June 8, 1893.

[The dog law will be found in another place. We give below the law in regard to hawks and woodchucks:]

Section 1. Be it enacted by the General Assembly of the State of Indiana, That the Board of Commissioners of each county may cause to be paid out of the county treasury a sum not exceeding two dollars for any person who shall deliver to the auditor of the county a woodchuck scalp or the head of any owl or hawk. Provided, That such person shall take and subscribe an oath that the woodchuck, owl or hawk to which such sum shall be paid was killed in the county, and that no reward has been received by the person so killing the same; and that no reward shall be paid for the scalp of a woodchuck, owl or hawk, and that the provisions of this act shall not apply to persons who are engaged in the business of raising and selling such animals.

Section 2. Whereas, an emergency exists for the immediate taking effect of this act, therefore it shall be in force from and after its passage.

PHILADELPHIA NOTES.—Now, that our State Legislature declares the English sparrow must go, it becomes a matter of considerable importance how best to diminish his numbers. Our daily papers are recommending poison, the shotgun and the permit-slip on the part of the youngsters to use the illegal slap jack. All these methods within the city limits would be quite as much of a nuisance as the sparrows themselves. If they are to be destroyed, we should begin at their homes, and every nest within reach must be torn down, and every egg or young sparrow made away with. At first, this plan will, to some, appear cruel and inhuman, but it is a far safer method to adopt than the promiscuous spreading of poison throughout the city, or the dangerous discharge of small shot in the parks, yards, etc. We doubt if much head way will be made against their greatly increasing numbers until a systematic campaign is inaugurated for attacking their nests. A number of quail are breeding in our extensive park grounds, several coveys were raised within its limits last year, and wintered well. The cock birds can be heard whistling their "Bob White" in every direction, and for some distance around the enclosure the country has become fairly stocked with birds. Effort is being made on the part of the reorganized Philadelphia Kennel Club, to hold a yearly bench show of dogs in this city. I am pleased to state there is every prospect of the executive committee being successful, and that we, of the Quaker city, will have a "dog feature" once a season. There seems to be a growing fancy here on the part of many who are fond of dogs, to give their attention to the hound variety, and I am told by no few that so little sport can be had near the city on account of the scarcity of birds, it no longer pays to keep a setter or pointer and not work him, while any afternoon a hare may be started, and a good run and fine sport can be had with the hound or beagle. Our "stay at homes" must have their enjoyment, and there can be no better way than with the still comparatively plentiful little hare.—Homo.

THE FUTURE SHOTGUN.—It shall be single barrel for accuracy of aim. It shall have revolving chambers at the breech, insuring continuity of discharge, and supplied with a retractor. The hammer should be so constructed as to act as a firing pin, dispensing with the latter. The lock should be on the double-action principle, so that continuous firing may be had by pulling the trigger. The hammer should have a safety click similar to that in the bulldog revolver. The stock should be adjustable to any drop. It should have a supplementary chamber to fit in the shot barrel, and supplementary chambers for ammunition. The shells should be made so cheaply that they can be thrown away after discharging, because it is as much trouble to keep a shell in order for reloading as the barrel of a muzzle-loading gun. As confessedly better results are obtained from metal shells, they should be made of that material. To lessen the expense, the shells should be made solid, as in the rifle ammunition, with four holes in the center of base. This would enable those who prefer to do so to load their own center-fire shells of usual construction. Or they might be made to combine both principles of rim and center fire. The rifle bullet should be nearly a straight tube, slightly rounded on the end. My impression is that the riding of barrel for the elongated bullet should be straight and without any twist, which was designed originally for the round ball. The shells for both shot and ball should be loaded at the factory, insuring more accuracy than it is possible to obtain by individual efforts. I know some sportsmen insist on loading their own shells, but they might as well insist on making their own guns. In the foregoing provision I have purposely omitted most of the reasons which have led me to my conclusions, as they will readily occur to the practical sportsman or gunsmith; and I have only to add that I expect to levy a tribute of one of the best upon the manufacturer of "the gun of the future."—Geo. C. HENNING (Washington City, June 19).

STAR WADS AND KYNCHOS.—I would be pleased to hear from some of the correspondents regarding the star wads. Do they hold the charge firmly in place, and are they not injurious to the gun? A trial of some of the Kynchos brass shells sent us gives anything but satisfactory results. A test of both 10 and 12-gauge showed that they do expand, and to such a degree that the wad cut out of the shell was necessary to remove the empty shell, no such difficulty was experienced had in the same guns with other brass or paper shells—neither did they resume their original shape when fired. Altogether our experience was not like the one who wrote a booming article in their praise and signs it "One who has fired some 20,000 shells," for it would have taken months to fire that number of shots with these shells and our experience. D. J. W. C. has written that our correspondent's bad success with the Kynchos shells might possibly have been due to some other cause than a fault in the shells themselves. It is impossible to ignore or sweep aside as untrustworthy the mass of testimony brought forward in England in favor of these shells. We want all the information that we can get on the subject, and this information should be accompanied by all possible details as to the gun in which they were used, the powder, the wad, the way they were loaded, and everything else that can assist us in forming an intelligent conclusion as to what the shells will do.

KID ANTELOPE.—There is no law against killing antelope and ducks in Kansas, but I know it is not right at this season of the year, and so, although they are almost at my door, my rifle stays in its case and my old muzzle loading shotgun—I am ashamed to say—rusts. The antelope are commencing to have fawns, they scatter out now, and run alone, and you can see an old doe on almost every knoll a few miles south of here on the other shore of the Arkansas River. The fawns are in a hollow somewhere near, and it is very easy to catch them if one wishes to. They are easy to rear, and I have raised several on a bottle. Last year we went out once during the month of June, wishing to kill a buck, and after a long crawl killed an old doe by mistake. Her udder was full of milk, and we bunted a long time for the kid until we found him. The last I saw of him was in October when he was the other shore of the Arkansas River. But few antelope are killed here during the summer, and the hunting is fine here about October 10, when we all turn loose.—W. J. D. (Cimarron, Kan., June 9).

TEXAS.—Indianola, June 7.—We have some winter ducks still here at this late season. I do not remember to have seen any before so late in the year. The prospects are good for plenty of chickens and quail, as the season has been very good so far, and the game laws are generally well observed.—G. A.

A BATTLE WITH A BEAR.—A terrible fight between two brothers and a bear recently took place on the South Fork of the North Percha River in the Black Range Mountains. The men were coming down an arroyo, entirely unconscious of the presence of the bear, which was concealed in the brush near the trail. The only arm carried by the men was a revolver of small calibre. The bear struck the elder of the two, knocked him down and tore him, and was then attacked by the younger brother, upon whom he turned and tore the muscle from one of his arms, afterwards biting him most savagely in the legs. While this was going on the other brother managed to get up and placing the revolver against the bear's body, fired a shot into his bowels. This appeared to satisfy the bear who at once went off into the brush. The men managed with some difficulty to reach their camp, where a little later their wounds were dressed by a physician. They were badly chewed up, but it is believed that they will recover without being permanently disabled.—J. M. R.

BEAR HUNTING IN SUMMER.—Bears are playing havoc with the farmers' hogs a few miles from this place, and there have been several human casualties in the order to give bruin a benefit. Last week, several of the boys went in the swamp with guns and bombs, and killed two very fine, fat bears. There are several others in the neighborhood, and we expect to "try our hands" again in a few days. There is one very large fellow, and should we tackle him, there will be fun.—A. F. R. (Belvidere, N. C., June 13).

A NEW GUN CLUB.—There was recently organized in Rhode Island the Union Gun Club, of Pawtucket and Union Falls, with the following list of officers: President, Mr. Arthur R. Sweet; Secretary, Mr. S. F. Dexter; Treasurer, Mr. A. F. Pierce. Executive Committee—P. D. Freeman, John Ramsbottom and Charles R. Payne. The first meeting was held on Decoration Day, when it was proposed that shooting meets should be held every Friday, weather permitting.

CLINTON, Mass., June 14.—The Clinton Sportsman's Club held its annual meeting this evening and elected officers as follows: President, J. D. Lloyce; Vice-president, W. H. Gibbs; Treasurer, D. H. Hott; Secretary, J. C. Avery. Directors—G. A. Sampson, A. N. Smith and W. H. Elwood.

## Camp Fire Flickerings.

"That reminds me."

I WENT to Colorado in '72 with bad lungs, and went out onto a ranch, bought me a pony and saddle, and slowly regained my strength. When I got stronger I commenced poisoning coyotes. I had pretty good luck, and soon the cat man that I was living with got uneasy. He hid lots of cat-tie, and was well off, and very busy with them, but he couldn't stand it to see me make a dollar or two a day, and he said that he was going to poison too. So I filled a strychnine bottle with epsom salts and set it on the mantle with three other bottles of the genuine stuff. Strychnine bottles are usually not more than two-thirds full, and so my bait took. He asked how much strychnine cost, and said he wanted a bottle and picked out the one I wanted. "There, that bottle is filled honest," he said, "and I am going to get fifty coyotes with it." He set out his baits carefully on the east side of the creek—I had the west—and his face grew longer day by day. At last he declared that there were no coyotes on that side, and that he was determined to come to my side. So I changed sides with him. He got two the first morning. I had not found, and was in high spirits, but that was the last. I got about fifty and finally stopped poisoning. I never told him, but I think it leaked out, for he let some remarks drop once that made me feel guilty, but I changed the subject. It was mean, I know, but if you had seen the fellow's face as he came in morning after morning with nothing, always to find me with a wolf or two, and I not daring to laugh. He is a sheep owner now in Colorado, and he asked me to get a coyote that eat his lambs with something stronger than epsom salts. W. J. D.

CIMARRON, Kan., June 8, 1893.

Last autumn a party of sportsmen who are partial to the "yaller dog" started for a grouse shoot. They took with them, beside their own curs, a Gordon setter belonging to a friend of mine. Before they had long in the brush they discovered the setter evidently paralyzed by fear and gazing intently at a large stump. One of the men suggested a woodchuck in the stump, and was fearlessly approaching, when one of the others, intimating that it might be a more unsavory animal, they all beat a hasty retreat. Learing their guns against a tree, the sportsmen held a council of war. The boldest of the party concluding he would stir the beast up at all costs, he stepped forward and cautiously crept toward the stump. Suddenly there was a rustle among the dry leaves near by, and out whirled a noble ruffed grouse. The men made a wild dash for the guns, but as they all clutched the nearest one, the attempt was a failure. The setter looked anxiously at them for a moment, and then, with a look of disgust in his eyes, he slunk away. There was a pause, and then one of the sportsmen spoke up: "It's the last time I take this new-fangled dog on a grouse shoot." The idea of his not knowing a partridge by a pole cat. If my Browne had been here he would have had that bird up a tree in a twinkling, and I should have had it by the legs by this time.

The above is a fact, and happened in a town on the shores of Lake Champlain. Don't you think that place needs a missionary? O. A. P.

It was while in the North Woods with the Muir boys that the following is said to have happened: A party were camping at Clear Pond. One of them strayed off by himself in quest of fun and something to shoot at. He became lost, and as the shades of night began to creep over the landscape, he began to get troubled, then scared; and as he was scared he ever and anon would shout, "Man lost! Man lost!" And as the deepening shades of night drew on he grew more and more alarmed. He began to walk right again and again with the despairing cry of "Man lost! Man lost!" Just as day faded into night, and he shrieked the despairing cry like the wail of the lost, a horned owl, perched on a tree near by, with all the wisdom of his race cried out, "Who, who, a who, who?" The man stopped and started, and then in answer to the query answered, "Jim —, of Rochester, you fool you!" S. S.

## Sea and River Fishing.

To insure prompt attention, communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

**ANGLING RESORTS.**—We shall be glad to have for publication notes of good fishing localities. Will not our correspondents favor us with notes of desirable points for angling excursions?

### AN AQUATIC TRAGEDY.

[Respectfully and fearlessly dedicated to the Cuvier Club of Cincinnati, where the latest apex-fish vagrant tales find a safe refuge and much company.]

AND early, saith old Izak, "to me it seemeth meet. I wend unto the river, and from its depths, replete With dainty tritons unnumbered, I from their ranks seduce. Both large and smaller specimens, 'til surfeit urge a truce. This April morn exultant, I feel my spirit strong, Nor were I there fish within the creek which can resist me long."

Oh, well had this exulting speech remained for aye unsaid, Its haunting reached one fish far down within his cozy bed, A cruel, lethargic codfish of a most gigantic mold, Whose mouth seemed almost cavernous, his corpulence untold— Hearing, a smile sardoniac stole slowly down his jaw, And he twined his tail with savage joy, for quick revenge he saw.

But Izak, all unconscious, assuming spade and can, Behind the barn assiduously a search for bait began; And having exhausted enough of worms to last the day's sport through, He forthwith ceased his labors and shouldered his huge bamboo— A pole it was of extravagant size, with a butt just like a tree, And viewing its length from butt to tip, the end you'd hardly see.

His line was stout and matched the pole, his hook of wondrous size, A fish that once "caught on to" this forever closed his eyes. So Izak hurried to the brook, humming an antique tune, And as he reached the willow tree the church bell chimed for noon. His heavy line he slow uncoiled and tied the ready hook, Then from the can's entanglement enough of bait he took; Each worm by route circuitous was dextrously impaled, Nor was his victims writhing woe with his cold heart availed.

Now has he reached the Rubicon—alas he will not stay! Complacent views the waters which him will soon betray; And with sereneest confidence, line to the wave he throws, Over the bait for gourmand fish the waters rippling close. Upon a marbled sycamore, whose upturned roots invite, He now takes up position and awaits intent—A bite!

Flit look, a seething challenge, had sunk the cat so near, The act to his inflamed mind, gross insult did appear; He ground his keen incisors, his spicuous gills flapped he, "The expression of his monster face was hideous to see, And the sediment surrounding he lashed so with his tail, That it floated in the water like dust in a summer's gale."

With motion of a nightmare—so slow but sure as fate, He moves to end this history we painfully relate—"That hook, despite heroic size, when grasped those jaws between Seemst lost," 'tis held a moment, and then no more is seen. The line he also quick consumes, and starting sure to view, As urchin hoys much sugar cane he the tough bamboo!

Meanwhile our ancient fisher stood with most pugnacious air, And thanked the happy fortune which had kindly brought him there; Bethought him what a barbecue this giant fish would make, Which he, from out its elements, eventually would take. Nor dreamed he of a danger, but strove with stubborn might His mighty catch to overcome and him to land aright.

But now the end is nearing, few inches intervene, (And rapidly decreasing) the man and fish between— Down to the sandy margin of the wave-resting shore, Goes now our staunch old angler, whose rashness we deplore. Oh would he, but retreating, forsake and flee the strife, He could with spotless honor long years prolong his life!

With quick convulsive efforts the fiend still nearer draws, And with malign expression down drags him to his jaws— Then did the old man realize the fate which was in store, And the waves upon their journey his death-wail sadly bore; Then laughed the horrid monster as well as thoughtful able, And sampled Izak curiously as epicure at table!

His long arms quick are telescoped, his head, his shoulders next, Nor does the monster hesitate, nor seem at all perplexed— Inch after inch of angler man within himself bestows, Nor does the least cessation show, the vacuum lesser grows. But more of this sad history we will the readers spare, And for the just denouement bid him his tenure prepare.

The catfish in his eagerness did but invite his fate, And how, without embellishment, we will succinct relate. Our rural friend, whose Hamburg steak had recently been ground, Had fed so large, they published him thro' all the country round; To trundle them round daily had been a labor quite, But then our rustic was a man of more than *average* might.

Enceased he these extremities in shoes which spoiled a hide, Those heavy soles, iron studded, the elements defied; Now *Pharos* robes arrived these barriers at, They astonished and disgusted this most bewildered cat; Hard tried he to involve them, the effort was in vain, His mouth he opened widest, but out those feet remain.

Then to eject his tenant attention now he turned, But Izak, stubborn as in life, refused thus to be spurned; His captor one more struggle makes, stupendous, and his last, And surely are the feet withdrawn, the struggle must be past. But no! a mighty glowing cloud that monstrous length, The throes which mark the conflict bespeak heroic strength. The jaws are propped asunder, by pedals, brawn-cased. So firmly placed in situ, they cannot be displaced. His giant life ebbs slowly—'at last his struggles cease, The water stills its ripples and over all is peace.

The upturned old gold belly of the monarch of the stream Reflects the sifted sunbeams which through the foliage gleam; And towering from the surface, two leather obelisks high Rise plaintive, Izak's cloth-yard feet, which we may descry. And thus we and our line, our treacherous labor done, Which, but as urged historian, we else had not begun.

CRISTINA

CRAPTS.

## PLANS OF THE KINGFISHERS.

BRO. "NORMAN" you are quite right; you struck the truth at least once in your checkered career, in *FOREST AND STREAM* of May 31. "Old Hickory" (Kingfisher), "Knots" (the Scribbler), "Jim" (the Editor), and "Old Polican" (Uncle Dan Sloan), besides four other kingfishers set in pin feather, are "overhauling their tackle and preparing the weapons for another camping trip," not, however, on Intermediate Lake, but further north and east. The fish in Intermediate ran rather small last year, not a bass over five and one-quarter pounds, nor a masacalonge of more than thirty-one inches in length, so we are going this season to a newer and wilder locality in "search" of bigger game (fish), "such" as masacalonge of six feet in length, and bass of thirty-one inches. I have a letter from the solitary settler near the lake where we are going to build our camp-fire, inclosing the measure of a black bass taken in the lake this spring, which sizes up just thirty-one inches in length, with a girth of twenty-four inches in front of the dorsal.

How does that strike you for the clamping? I won't retort in kind your little pleasantry about the big masacalonge that is "waiting for the champion to come up and tackle him to give them a run around the lake," but will assure you that the narration of the battle with the four feet four and one-half inch masacalonge in *FOREST AND STREAM* of June 22, 1882, is true in every particular, the only thing lacking, perhaps, being my ability to wield the ready and facile pen of a "Norman," to portray the true glories of that fight.

I plead guilty to letting the fish "die at the stake," instead of knocking him on the head, and the only excuse to offer is that we wanted very much to keep him alive until we broke camp for home. On behalf of the "Kingfishers," I thank you sincerely for your kindly invitation to "drop in" and see you at your camp at the mouth of Torch River the coming summer, and assure you that nothing would afford us more pleasure than to pay our respects to your ladies (bless 'em) and yourself, and should we find that we can spare the time on our way home to do so, you may look out for Kingfisher and that "irrepressible youngster" to have a good romp and a "rattle." I promise you that I will write up for *FOREST AND STREAM* the "net" results of our coming trip, trusting to put it in a shape to please the broadest of the rod and a little and offend Brother "Norman" as a time to "jest about himself a lafin'." If you can spare the time, point your cut-water in a northeasterly direction, and follow it for a matter of eighty miles as the crow flies, and you will find us any time after July 20 and up to August 15, located in a camp that you will wish to take home with you. Or, better, come to Cheboygan and ask Mr. Wm. Spencer, of the Spencer House, to put you on our trail, and then, as old Dave Edwards would say, "Just like ahead tel ye smell blud." Come over and see us, and I will guarantee you some sport that would have made blessed old "Saint Izak" feel discouraged—sport that will set you back at least ten years, and I promise you, too, that you will not find a heartier welcome in the North Woods than will be accorded you in the "Camp of the Kingfishers." KINGFISHER.

## WITH HACKLES AND GENTLES.

### XL.—A "HARB BACK."

"In childhood's days, when summer came,

It was my earnest wish,

To leave each noisy, boisterous game,

To rove about and fish.

I sought each river and stream,

Where reeds and rushes grow,

And sleek-backs prime fish did seem,

A long time ago."

AS the true sportsman, be he angler, shooter or huntsman, has the "whip-hand" of all mankind in the pursuit of manly pleasure, so his memory is stored from year to year with incidents and adventures that he can recall with zest and pleasure.

As in the puppy we forecast what the dog may be, so in the boy are the germs of the man's estate and inclinations. Of course "childhood" "will tell" the truth, and the angling or hunting story may look for his desired "points" in his progeny, and with grateful pleasure may watch and foster their development in the right direction. It is pleasant to see children and youth take kindly to the legitimate sports of the field, to share with the mind and book-lore the healthful education of the body. As an angler, I believe that when the boy receives the true hand Latin grammar, in the end should be placed a respectable fisher, and happy is the lad whose tutor is an expert in the use of both!

Bent pins and pack-thread are but straws, showing whether the wind blows, and these "indications" should be supplemented by more appropriate rudimentary adjuncts of the gentle art.

As with mental culture, so with sportsman-like, physical training, the true and best way is the only way for proper guidance, and deviation therefrom or little heed thereto, is dangerous.

A boy's eyes generally brightens at sight of a dog, a rod, or a gun, and there is something lacking in his "make-up" if they do not. There is nothing incompatible with mental, or moral, culture in field sports, and hishop, priest or layman may sacrifice neither dignity nor sanctity, by throwing a fly, drawing a cover or riding to hounds. The Wise Man said, "There is a time for everything," and in every man's life there should be a "time" for healthful recreation. As always in these degenerate days, it is well, and our "bounden duty," to have

"Mens sana in corpore sano."

Doubtless, races and people, as well as individuals, owe their stamina and exaltation in the world's history to their proper regard for and practice of manly sports and exercises. In modern times England is a case in point, where every boy (and many a girl) takes as naturally to field sports and to outdoor exercises as to mother's milk. The result is obvious—a race of men and women the like of which can not be found upon the face of the earth. As with books so with field sports, their love and use and practice must begin "in childhood's days," and grow with the growth, and strengthen with the strength, of the body. The sportsman unwittingly must become more or less of a naturalist, and his familiarity with the habits and haunts of bird and beast and fish are a *sine qua non* to the successful pursuit of and indulgence in his favorite pastime. He meets "Dame Nature" face to face, and is on the most familiar terms with her. His book-lore is supplemented by her own

incomparable volume, and he may read therein far more than

"Words, words, words."

The love and the study of nature is a subtle pleasure—a precious privilege—and at every step we stumble over some stupendous fact, coming down to us from the foregoing ages. In every familiar haunt we see something new and so old that the mind stazes its calculation in wonder and adoration of its source.

Not in heavy creels or plecthoric gamebags is the sportsman's pleasure hidden, nor by them is his success to be computed. He goes forth with rod, with gun and dog, and he may return "laden with spoils," won by the one or the other, but he must return a more satisfied man after his tryst with nature, even if he has neither a "rise" nor a "shot." Of course it is different if his dinner or supper hangs upon his success with rod or gun. Such cases are, fortunately, rare, however.

I always look kindly upon callow anglers, and especially upon such as take kindly to the craft. In boys, as in men, there are anglers and anglers. With half the glance the practiced eye can tell the true from the false, in this as in other and, perchance, "weightier matters." Happy is the boy, born an angler, to have an angler's thorough painstaking education in all things pertaining to the craft. This it is that makes the youth win (not in "his own eyes," however), and the old man young again. Hope and experience here are met together, and a right pleasant sight the twain make to an interested on-looker.

In this paper I had thought to give a reminiscence of "childhood's days" relative to a first essay at bottom-fishing, but my thoughts and pen have "run riot," and I must abruptly sound "recall."

It is notable how a sport, once loved and pursued with zest, becomes part and parcel of life's declining years. As the octogenarian tells the "rising generation" of his piscatorial doings, and not only tells but gives the youth a pleasant "object lesson" in "splicing," "wrapping," "fly-making," or in an honest cast upon a bit of rippling water. There are men who never grow old, and through the mask which the years and woes of this life over them throw, there leaps forth the spirit and the loves of youth. To know such men is a boon—the what rare blessing it is to fish, or to shoot with such!

Blessings on them who can truly sing:

"Old Father time has play'd his pranks,

My hair is silver,

Yet still along the verdant banks

Of streams I fondly stray,

The gentle craft I still pursue,

While wandering to and fro,

And angle as I used to do.

A long time ago."

O. W. R.

## SOME FUTILE EXPERIMENTS.

*Editor Forest and Stream:*

Our old-fashioned Yankee folk never say "I wrote him a letter," but "I sot down and wrote him a letter," never neglecting to state first that they "sot down," which shows that they enter upon the performance of so important an act with becoming solemnity and proper deliberation. In such a spirit only would it be fitting for me to communicate a little, big, true fish story, concerning pike-perch fishing, with no pike in it and but very little perch, and in such a frame of mind, having duly taken thought of the probable consequences, I "sot down" and wrote you a letter.

Is the pike-perch a good fighter in the good fight of the angle, does he comfort the palate or disappoint it when brought to the platter, is he an "evil heart, a slow belly," affording his captor no pleasure either of hand or stomach? Being somewhat muddled between some recent *FOREST AND STREAM* communications, and my own remoter recollections concerning these questions, I determined to refresh my memory by actual experience, and so got myself up one morning, not many days ago at an hour when all honest folk, myself of the number, should be abed, and hied away with trolling gear, and bait gear and minnows, to the East Slang, where my boat was, then therein down that sluggish bit of water to sluggish "Woonakekewee, the Little River of Otters," down which I rolled my "evil heart" and "slow belly" getting the bait should say a "rise," or a "strike?" Well, I got there, for I struck weeds, and they "riz" when I hauled them in, all sorts of under-water growth, with latin names as long as themselves, but I did not get a bite, except of early mosquitoes, several of whom got a tough morsel of this meek and lowly worm. (Worm and mosquitoes were served right in their equal disappointment for going to the bait.) I was getting a little "sot" when I sounded with a pole for the channel, hidden in this waste of waters, a sad waste too, of this sometimes scarce fluid, found the edge of it, stabbed it with my pole, to which I tied up and began to get ready to fish with bait.

Just as I had got my rod together and my line rove, up rowed Charley Thompson from the lake with a Mr. Shedd, a member of the Jolly Club, from whose company they had just unsuccessfully all along shore and up and down Sun-galnetuck, and being in pursuit of fish for breakfast, more than sport, and taking me for a Canuck overhauling his night line, they bore down, or up, upon me in hope of a supply of bullpouts. While I was endeavoring to dissuade them on both points, talking pure Yankee and suggesting that pouts were not much to be caught with can't fish, and after addressing a few remarks to myself, which were as well received as, from their character, could be expected, I looped on another snell before I baited the hook, and went to fishing for all the pike-perch in Little Otter. In about a quarter of an hour I got what I always called a bite, but what I believe is "good form" to term a "rise," or "strike." I fished several times, first raised to the gaminess of the pike-perch was about to be settled to my satisfaction, and I felt strong hopes that the next night soon be. But there was only a spurt of resistance, and then a complete acquiescence into the decree of fate, and I lifted inboard a poor little yellow perch. But behold! Out of one corner of his mouth was hanging my lost snell, and the minnow so fool

ishly sent adrift was in his throat. That' perch, 'was the only fish I caught, that the only bit I got, though I fished for three hours with the three sisters, Faith, Hope and Charity. When the last and greatest of these departed, I departed, also, and so I left off as I began, asking myself, is the pike-perch a game fish, and a good food fish? But I got back my favorite hook and line.

A few years later I was trolling for pike-perch with a friend, and caught a black bass. She was full of eggs, which appeared to be not less than within a week of ripeness, and that was the 7th of June. Now, I see by FOREST AND STREAM that the bass season begins in New York June 1, and if the spawning season is not very much earlier with you than with us, how can the honest angler go fishing for bass without qualms of conscience, when he knows the fish are spawning or just ready to do so?

Our wise legislators allow the taking of all kinds of fish with the hook in Lake Champlain, and ten miles up its tributaries at all seasons, and the prohibited net-fishing goes on just as usual. If the present style of legislation and enactment of fish laws continues, our grandchildren must be good Protestants, or bad Catholics, or go hungry on Fridays.

AWAYGOOSE.

#### MR. BERGH ON ANGLING.

MR. BERGH is reported to have at last turned his batteries upon angling as a cruel pastime. He objects to President Arthur, not on political grounds, but because he is an angler. In response to Mr. Bergh we will give his language as reported by the New York special correspondent of the Chicago Tribune.

"Chester A. Arthur should not be thought of as a candidate for re-election to the Presidency. He is not only a disgrace to that high office but to civilization." This was not political condemnation. It was an acute expression of sympathy for fish. The speaker was a tall, gaunt, middle-aged man, with a singularly long and melancholy face, hair reaching straight and square to his collar, and other personal peculiarities which Mr. Bergh knew, on sight, to be all New York. But why was he down on Arthur? Let him explain: "The President of the United States should stand for the highest development of our humanity. I have nothing to say against Mr. Arthur's administration. He is personally a polished gentleman. But he is a fisherman, which is the same as saying that his instincts are murderously cruel. It is a dreadful wrong to find diversion in torturing and killing the fish of the sea. You may want to laugh at me for saying this now, but twenty years hence you will be in the small minority, provided you don't in the meantime go over to the majority and conclude that fishing, like hunting, is barbarous and merciless. It is not so many years ago as that when cock-fighting was considered a sport for refined ladies to delight in. Dog-fighting and rat-baiting have barely ceased to find favor in the eyes of gentlemen. Pigeon-shooting is just now falling into disgrace. Hunting and fishing will come next in order of just condemnation. But the President ought already to represent the advance in this regard. Every time he drops a line he lowers himself. It is too bad—too bad."

It will be a hard matter to convince people that Mr. Bergh is correct in his views, especially those who read FOREST AND STREAM, as all anglers do. We think that every time a President of the United States, or any other gentleman, "drops a line," he is taking one of the most relaxing and harmless of recreations, but the art is too old to need defense at this late day. The good work done by Mr. Bergh in protecting our domestic animals from the brutality of men, especially in the case of the horse, entitles him to great respect; but when he tries to class angling with dog-fighting and cock-fighting, he is carrying his zeal too far.

If a man may not fish because he is President of the United States, what relaxation should be allowed him? If it were possible for the Society for the Prevention of Cruelty to Animals to succeed in forbidding a man to angle during his term of office, then the organization of a Society for the Prevention of Cruelty to Presidents might be in order. We hope that our next President, of whatever political complexion he may be, will "love quiet and go a-angling."

#### BLACK AND WHITE BASS FISHING.

THE following description, which has been sent by a correspondent, will be of interest to those who may find themselves in the neighborhood of the locality during the present season:

Niagara, Lincoln county, Ont., is situated at the mouth of Niagara River, on the Niagara branch of the Canada Southern Railway, five miles from Buffalo and sixteen miles from Niagara Falls. It may also be reached by Toronto by steam across Lake Ontario. Good bass fishing can be found here, also perch, herring and other fish of like quality in good numbers. The best grounds for black bass are those on the American side of the river, just at its mouth. There is very little, if any, fly-fishing for black bass at the point, as the water is too deep. Most fish are taken with bait, live minnows being the most killing. All fishing is done from boats, either trolling or anchoring, but the latter way is most popular. Good boats and everything that is needed can be had of the following named fishermen, who are highly recommended: John Bolton, Charles Bolton, Thomas Elliott and Dan Sherlock. During August, September, October and November good sport can be had with the fly, fishing for white bass, which are found here in great numbers. These fish are from one-half to two pounds, and are very gamy. They are found on nearly the same ground as the black bass, and in the eddy formed by the dock of Fort Niagara, which runs out some little distance into the river. These white bass are taken in the following manner: Time, morning or evening; but the latter is the better with the wind blowing gently from the south or southeast, just strong enough to make a slight ripple on the water. About five or six fish are taken at a time, and are of twelve ounces in weight, with heads from six to eight inches, and four-fifths of white are most generally used. But these bass are not very particular, and will take almost anything in the shape of a fly. One also wants a good, light, easily-turned stick, and a man to pull.

While feeding the fish near above the surface of the water, and in schools of good size. As the fish are nearly always in view of the fisherman, this description of fishing is very enjoyable. On sighting "rise" have your skirt bled within thirty feet or so of it, and drop your bait just on the opposite side of the school and draw them there through it, or striking a fish play him with the others, and the chances are that you will fill every hook, and

you will have the greatest sport imaginable to bring them to land, as they are game to the last. Sometimes as many as a dozen "rises" are in sight at once, some of which contain hundreds of fish.

After the bass stop feeding, which they do just before dark, one can enjoy a few minutes with the pickerel which feed the same bait, but on the opposite side and the current of the river. They are a game little fish, and one enjoys a few casts with them before going home. Good board can be had at Niagara at Queen's and Long's hotels, and at various private houses.

#### THE RANGELEY LAKES.

JUST twenty-three years ago I first saw the Rangeley Lakes and landed my largest brook trout on the apron of the great upper dam of the outlet of Mooseheweg Lake. Twenty years ago I brought to New York a champagne basket filled better and nobler than ever a champagne basket before or since. It contained only eight brook trout, but they weighed respectively 5, 5, 6, 6, 6, 7, 8, and 8 1/2 pounds. The largest was presented to William Cullen Bryant, the next to Henry J. Raymond, the third to George Wilkes, and the fourth to Genio C. Scott.

The following day I wrote Prof. Towns and Spirit of the Times contained accounts of their capture, with acknowledgment of the remarkable, indeed, unexampled, gifts. Scores of letters of interrogation, of doubt, of surprise, were received by these papers, only to be answered affirming that these were actually *Salmo fontinalis*.

In 1867 the Opossum Angling Association was organized, and the elegant club house built at Indian Rock. The same year I made the eventful trip from Rangeley Lakes, conveying a transportation truck containing the largest pair of brook trout probably ever in company; a female trout weighing eight and three-eighths, and the famous male trout weighing ten pounds, which were placed alive in my pond at Stanley, N. J. It should go upon record that the above weights were most accurately made in the presence of numerous witnesses after the decease of the fish, a steelyard being used.

Moreover, they had been three weeks in captivity, during which time they had eaten nothing, and had endured the discomforts of nine miles across Rangeley Lake in a fish car which contained forty-three brook trout, averaging five pounds each; thirty-five miles wagon ride, four hundred miles by railroad, across Boston and New York by express wagon, and two miles by wagon in New Jersey. Describing this experience on one occasion to the late Prof. Agassiz, I inquired what they probably did in the weight. He replied: "The male trout at least two and one-half pounds, and the female trout one and one-half pound." This would make them twelve and nine and seven-eighths respectively, undoubtedly the largest trout of either sex on record. The male trout was thirty inches circumference and eleven inches diameter. It is to be regretted that in those early days the elegant and accurate fish spring balance was unknown. It will be of interest to add that on this occasion (1867) I also brought home thirty thousand trout eggs nicely cranked in moss, many of which have hatched on my premises.

In 1878, in connection with the late L. L. Crouse, of Washington, and Hon. Henry O. Stanley, of Dixfield, we erected the first hatching house at Rangeley Lakes on Bema Stream.

In 1877 another was constructed near the old dam on Rangeley Outlet, the funds being mainly contributed by Messrs. Crouse, Daniel Dodd and Eugene Vanderpool, of Newark, N. J., Theo. L. Page, of New Orleans, and myself. This has been regularly employed, and fully 25,000,000 young trout turned into the lakes. Many thousand land-locked salmon eggs have also been hatched and the young fry liberated. A large number of these splendid game fish have been captured, many weighing from 2 1/2 to 5 lbs. Mr. Stanley reports one seen in October, 8 1/2 and 12 lbs. weight. It is well known that the Sebago Lake land-locked salmon grow to the enormous weight of 15 and 20 lbs.

As the number of visitors annually frequenting the Rangeley Lakes now reaches the large number of 3,000, to accommodate them capacious hotels, camps and cottages have been erected, the question naturally occurs, has not this greatly increased fishing begun to deplete the waters?

The results are quite the reverse. Indeed, it can be safely asserted that the number of fish taken in this season has rarely been exceeded, as the following remarkable record will prove.

A party of eight caught 350 trout weighing 359 lbs., the largest 7 1/2 lbs.

J. C. Lombard, of Auburn, Me., took fifty-seven weighing nearly 100 lbs., the largest 6 1/2, another 5, another 4 lbs.

J. C. Holmes, of G. W. Wadsworth, of Farmington, Me., captured forty, several being two and a half pounds.

John Herrick caught in Rangeley Lake, May 31, in one hour, ten trout, the largest a four-pounder.

Messrs. Sargent and Chase have taken in ten days over a hundred, several weighing from two to six pounds.

The champion angler up to the present date is Mr. Sargent, who captured a magnificent fish which weighed 8 1/2 lbs.

Among the visitors this season are Senator W. O. Fry, of Maine; Hon. Nelson Dingley, Gov. E. F. Fessenden, of Portland, Me., son of the late Senator Fessenden; Messrs. F. H. Leggett, George M. Colt, H. H. Bridgman, Howe Richardson, H. H. Bunney, Ad. Smith, Mr. and Mrs. J. Allen, of New York; Royal C. Taft, Robert W. Taft and A. D. Lockwood, of Providence; H. Y. Hobbs, of Bridgeport, Conn.; Wm. H. Cole, of Baltimore; C. F. Quincy, W. G. Loring, of New York; Cyrus Wakefield, of Boston. Commissioner Stanley turned in 300,000 trout and 100,000 salmon by this month.

STANLEY, N. J.

THE BOSS TROUT.—Hartford, Conn., June 18.—[Captain Andrews caught a common brook trout in this city which weighed 44 pounds. The captain, several days ago, had interviewed with this beauty and left him his line, and has been after his lordship ever since that time. Dr. Croary caught a trout weighing 24 pounds early in the season. We cannot report large creels being scoured here this season, but these two beautiful fish have been admired by thousands. The first named fish measured twenty-one inches in length.]

—FLICK FLICK.

BIG FISH FROM THE ST. LAWRENCE.—Rev. S. H. Synnott and Mr. Leonard Carpenter, of Poughkeepsie, recently returned from a short visit to the St. Lawrence River, where they did some fishing among the Thousand Islands. Among the fish brought home was a muskellunge, said to have been four feet long, and to have weighed thirty pounds. There were also a fine lot of black bass and pike.

PHILADELPHIA FISH NOTES.—Your correspondent saw some large yellow perch a few days since that were taken with minnow bait on the Shawmut dam, on the Schuylkill. These fish are by no means numerous in this portion of the river; indeed, they are rare in any part of the stream near the city. The bass of the Flat Rock dam, in the Schuylkill, have almost entirely destroyed the sunfish of that ground. I have amused myself in the past many afternoons with the youngsters or ladies fishing for "pumpkin seeds" at this point with light tackle and fly, but the bass have put an end to all such picknicking. At Port Penn, Del., opposite Reedy Island Light, white perch are freely biting. Shrimpane the favorite bait, and the fish are large—I am told. White catfish also are being freely taken here on the west side of the island at one of the old wharfs above the lighthouse. The fishing here will continue to be good through the summer. This is Uncle John Krier's favorite spot. "Siu Lord is the proprietor of the best hotel at Port Penn, and always has men and outfits for his guests convenient. A very good ground for large white perch can be found above the bridge which crosses the Raccoon Creek at Swedesboro, N. J. The creek breaks into several branches about half a mile above the road, and a half-hour before "the top of the tide," and before it begins to ebb strong, one can catch perch with a small perch on a large size minnow, as fast as the "philadelphia" can cast. Swedesboro is within an hour's run from Philadelphia, but it is seldom visited by anglers. About the first of July would be the proper time to go there, as the perch are not running yet, I am told. No reliable accounts of early sheepshead having been caught at either Barnegat or Tuckerton have reached us. It is early yet, and the season has been backward this year. Sea bass are not biting at either of these places, nor are they to be expected in any numbers until the first week in July.—Hoxo.

THE ALBICOKE.—In the communication from "Mehitable," in issue of June 14, he mentions the albicore as being taken by hook. This is not an uncommon occurrence in the deep sea. I have seen this fish captured by both hook and spear. It attains to a large size, and was taken by the "Shipper" of New Bedford, off the Brazil Banks, in 1859, the "Shipper" harpooned one which pulled down the scales at seven odd pounds. The bonita (Spanish—pretty fish) runs less in weight, and is truly of a "clipper build," as your correspondent styles it. A floating fragment of wreck, or flotsam and jetsam, at sea is almost invariably accompanied by one or more dolphins, probably to feed on the barnacles, Pacific and Indian seas. I have recently seen several taken from their stomachs. They are also insatiable enemies of the flying fish. While standing a "mashed" I have often noticed the dolphin chase the wing of the flying fish as it emerged from the wave from one light to another, until its inevitable capture. The meat of the dolphin is dry and tasteless as compared with that of the albicore, which is rich and juicy. Both species seem common to the Atlantic, Pacific and Indian oceans. I have taken them in all those seas, but never saw either kind outside of the tropical latitudes.—E. R. WILSON (Seneca Falls, N. Y.).

NEW JERSEY.—Oceanic, June 18.—The water for the last few days has been too thick for good trolling. My catches may seem very small in the eyes of many bass fishermen, but the fish are brought in sight of the house, and hardly ever fished for until the water clears. Saturday, June 18, 2-pound fish; Monday, June 11, 3-pound fish; Tuesday, gale blowing; Wednesday, June 17, 9 1/4-pound fish; 14th and 15th, business; 16th, 9 1/4-pound fish. The nine fish taken on Saturday morning were taken in less than one hour and fifteen minutes. Left home for Red Bank, and arrived back at 10:30, launched my little Ruston; after fishing, my son of seven years, took his sent in the stern of the canoe; reached the shore in less than ten minutes; struck and landed the nine fish and returned home by 11:15, the quickest time on record. When I reached the shore, four fish yet alive. Crabs are shedding slowly, water too cold.—W.H.D.

LAND-LOCKED SALMON IN NEW JERSEY.—It is well known that the New Jersey Fish Commission has stocked several lakes in their State with the land-locked salmon, but none that have been positively identified have ever been taken. Reports have recently reached us that many fish which "look somewhat like trout, but are not trout," have been seen in the State. The fish are from 10 to 15 pounds in weight. The reports say that these trout have been taken from the deep water with minnow gangs, but none have been captured. We wish our friends would take some of the strange fish and send us one for identification. If they are the land-locked salmon, they may be taken with the fly in spring and fall, when the water near the shores is cool, or in summer in deeper water, by either still-fishing or trolling, using a minnow for bait. In fact the same tackle can be used that is required for trout when fished for in these different methods.

BLACK BASS IN MICHIGAN.—Black bass fishing has commenced at Star Island. Mr. J. W. Smith makes the first catch, bringing in nine fine ones. He is followed by Mr. C. H. Smith, bringing in five. But H. B. Scott takes the boys into camp with his fish, a catch of twenty-nine, all very fine fish, weight, from 3 1/2 to 4 1/2 lbs. each. The gentlemen mentioned all hail from Detroit. I have just received to-day a fine life-size oil painting of that monster black bass caught at this place last season by B. B. Barney of Toledo, Weight, 7 1/2 lbs. His measurement was: Length, 23 in., circumference, 17 1/2. Good judges say this painting is the most natural one of a bass they ever saw. W. H. Machen, who is so noted for work on dead game, was the artist.—J.

TROUT IN NEW HAMPSHIRE.—I live in the midst of the best trouting in this country; the most easily accessible being where you can ride to it, and, without walking through the brush, catch all you can carry; and still, by the side of the trout, where you can get your daily mail, if you have any. Last Saturday I rode to a trout pond, and took a pool where in two hours, without stirring from my tracks, I caught 125 trout that weighed 39 pounds, and three days previous I caught from one pool by the very roadside five trout, one of 3 1/2, one of 2 1/2, one of 2 and two of 1 1/2 pounds respectively. The two largest were full of ripe spawn, the largest trout having just one-half pound in her. This fishing lasts all summer.—DR. A. F. WILLARD (Coos, N. H.).

PENNSYLVANIA.—Harrisburg, June 14.—[Black bass seem plenty here this season, but the river has been too high for good strings. How is it we hear so little about this section here? We have good fishing and hunting close by, trout, bass, pike and pike-perch, deer, turkey, ducks and quail, —G. E. H. B.]

The tone of this fellow's letter is so coarse and ill-natured that it is unworthy of further notice. I wrote in a spirit of kindness and not malevolence, and had not the faintest intention of offending him. I was writing to him as I would to any other man. I have written in the vein a dweller in the slums might indulge in to one of his own kind, and if there is anything in this world to a man of delicacy or refinement of feeling should avoid, it is to impute remarks intended to be insulting, from behind a mask. Come out openly and make your own points, and I will answer you as I should. Although your words may be painful, but a hidden burden of mud, or would-be wit, is despised of all men. I had a discussion in the columns of *Whites Spirit of the Times*, many years ago, on "Yachts and Yachting," which lasted for several years, with a very accomplished yachtsman, and he was very good, but I was not so good, and—by the way, got vexed, and became personal. I dropped my mask and ran my flag up to the masthead. Oh! no, he would

he best cocker spaniel dog under 28 lbs. Won by the Hornell Spaniel Club's Hornell Dandy.

Class B.—Mr. J. A. Roscoe, Albany, and Wabber offer a silver cup for the best Irish water spaniel exhibited from Milwaukee, Wis. Won by Mr. A. J. Cooper's Storm.

Class G.—Mr. J. D. Aloft, Milwaukee, Wis., offers \$10 cash for the best head of beagles. Won by Mr. D. O'Shea's Rattler and Music II.

Class H.—Mr. J. D. Aloft, Milwaukee, Wis., offers \$10 cash for the best greyhound. Won by Mr. C. H. Mason's Cash.

Class L.—Mr. J. D. Aloft, Milwaukee, Wis., offers \$5 cash for the best pug. Won by Mr. C. H. Mason's Sambo.

Class J.—Mr. J. D. Aloft, Milwaukee, Wis., offers \$10 cash for the best kennel of Irish setters. Won by the Emporia Irish Club with Irish Kork, Irish Kark, Irish Kark, Irish Kark, Irish Faith, Irish Rock and Irish Biddy.

Class K.—Dr. Wm. Jarvis, Claremont, N. H., offers a silver cup for the best Irish setter puppy. Won by Mr. S. I. L. Woodbury's Fawn.

Class L.—The managers of the show offer a silver medal for the best collie. Won by Mr. Thomas H. Terry's Zulu Princess.

Following is a complete list of the

#### AWARD \$100.

##### MASTIFFS.

Class 1. Mastiffs, Dogs.—1st, Mrs. Mason's Nixson, fawn, 3 yrs., 24 lbs.; 2nd, 3rd, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22nd, 23rd, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32nd, 33rd, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42nd, 43rd, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52nd, 53rd, 54th, 55th, 56th, 57th, 58th, 59th, 60th, 61st, 62nd, 63rd, 64th, 65th, 66th, 67th, 68th, 69th, 70th, 71st, 72nd, 73rd, 74th, 75th, 76th, 77th, 78th, 79th, 80th, 81st, 82nd, 83rd, 84th, 85th, 86th, 87th, 88th, 89th, 90th, 91st, 92nd, 93rd, 94th, 95th, 96th, 97th, 98th, 99th, 100th.

##### ST. BERNARDS.

Class 3. Rough-coated St. Bernard Dogs.—1st, Mrs. Henry Kisteman's Marro, reddish, 18 lbs., full pedigree; 2d, David Stephenson's Irish Prince, white, Irish Setter, Very high com.; 3d, J. Hawke's Spar, orange, tawny and white, 3 yrs., bred from imported stock. Com. Jas. A. McNettie's Cassar, orange, tawny and black pug, 3 yrs.

Class 4. Rough-coated St. Bernard Bitches.—1st, Mrs. Henry Kisteman's Mince, fawn, 2 yrs., full pedigree; 2d, David Stephenson's Irish Prince, white, Irish Setter, Very high com.; 3d, J. Hawke's Spar, orange, tawny and white, 3 yrs., bred from imported stock. Com. Jas. A. McNettie's Cassar, orange, tawny and black pug, 3 yrs.

##### BOXERS.

Class 7. Newfoundland Dogs.—1st, Chas. H. Mason's Mayor of Bingley, black, 3 yrs., Sam. Fly; 2d, S. I. L. Woodbury's Pete, black, 2 mos., 14 lbs.; 3d, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22nd, 23rd, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32nd, 33rd, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42nd, 43rd, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52nd, 53rd, 54th, 55th, 56th, 57th, 58th, 59th, 60th, 61st, 62nd, 63rd, 64th, 65th, 66th, 67th, 68th, 69th, 70th, 71st, 72nd, 73rd, 74th, 75th, 76th, 77th, 78th, 79th, 80th, 81st, 82nd, 83rd, 84th, 85th, 86th, 87th, 88th, 89th, 90th, 91st, 92nd, 93rd, 94th, 95th, 96th, 97th, 98th, 99th, 100th.

##### GREYHOUNDS.

Between Fulton Ferry and City Hall. OPEN EVENINGS.  
SEND FOR PRICE LIST.

## AMERICAN Kennel Register.

A monthly record of kennel events for the information and guidance of breeders, exhibitors and owners of all breeds of dogs.

Its leading feature is the "Pedigree Register," of sporting and non-sporting dogs, which makes it the only complete Stud Book issued in America. A register number is given to each dog, and an index will be compiled at the close of each annual volume, thus forming a permanent work of reference. The pedigree registration fee is twenty-five cents. The first two numbers of the Register contained the pedigrees of 138 dogs.

Departments are also provided for the registration of stud visits, dogs at stud, births, sales and transfers, dogs at sale, and deaths.

Prize lists of all the American shows will be given, with descriptions of the principal winners and dogs exhibited; also prize lists of important shows abroad. This department will include a record of field trials. The first two numbers of the Register contain prize lists of Washington, Ottawa and Pittsburgh shows.

The publication day is the fifth day of each month; and nothing can be received for publication later than the first day of the month. All matters intended for publication should be in the hands of the editor at the earliest practicable date. Entry blanks for each department will be furnished free on receipt of stamped addressed envelope.

TERMS:—Issued by yearly subscription only. The subscription price is one dollar per year. Make drafts and money orders payable to the Forest and Stream Publishing Company. Address, AMERICAN KENNEL REGISTER, P. O. Box 2,882, New York City.

## UPTHEGROVE & McLELLAN, VALPARAISO, IND. HOLABIRD SHOOTING SUITS

Of Waterproof Duck, Irish Fustian and Corduroy.  
Unequaled in Convenience, Style, or Workmanship.  
WRITE FOR CIRCULAR.

THIS

Is our Skeleton Coat or Game Bag; weighs but 15 ounces, has seven pockets and game pockets. It is of light material, dead grass color, and will hold the game of a successful day without losing a hair or feather. It can be worn over or under an ordinary coat. We will mail it to you for \$2.00. Send breast measure.

## B. F. NICHOLS & CO., BOSTON, MASS.

Manufacturers of

## HEXAGONAL SPLIT BAMBOO FISHING RODS, REMOVED TO 153 MILK STREET.

We are obliged to have more room in our factory and greater facilities for manufacturing our goods to meet the increasing demand. We have received the highest award and silver medal at the Massachusetts Charitable Mechanics' Association Fair for our superior goods. Send for catalogue.

## "O. C. PATENT PERFECTION"

Multiplying Reel, Center Action,  
Depressed Balance Handle,  
Safety Band, Adjustable Click.

The cut shows the position of the index when Reel is used (in fly casting) as a Multiplying Click. By pressing the index to the right, the Click is removed, and thus it can be used as a free-running Multiplying Reel.

It is the Reel for black bass, is simple, durable, and in every way desirable.

### TO SPORTSMEN!

These reels are for sale by the trade generally, therefore please apply to a dealer in your place. If you are unable to procure them, please advise me and I will mail, registered, on receipt of following prices.

ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, and kindred subjects, than is contained in all other American publications put together.

## THE SCREW WIND-GAUGE.

It seems that the worst anticipations of the gentlemen of the American team are to be realized, and that there is to be no chance for the men using the screw wind-gauge to shoot over the ranges during the Wimbledon meeting as contestants in the several M. B. L. matches.

The Council of the National Rifle Association of Great Britain has had the matter under consideration, and in a letter written by Sir Henry St. John Halford, he acts as the mouthpiece of his associates. The letter bears the appearance of an apology for the action of the Council, and an apology certainly is needed. It has been decided not to alter the old Wimbledon rule, which declares that a rear sight set by a screw is not a military sight, and that those of the American rifles having that attachment are to be barred out from the many Wimbledon matches.

The *Volunteer Service Gazette* has ably seconded the efforts of a large body of the English shooters who wish to see the antiquated rule abolished, and urge that this permission be now given the American team, in order to show at once a gentlemanly courtesy to a visiting body, and also to show such unpunctual apologists as the council members that a screw wind-gauge is not only an excellent range device, but may be made so simple as to be serviceable in the field. Our esteemed contemporary has taken a wide view of the situation, looking at it from the American as well as the English standpoint, and very properly refuses to be convinced by the letter of Sir Henry Halford, which is not only misleading in its review of the history of this wind-gauge discussion, but erroneous in the conclusions which it draws.

The screw wind-gauge to-day is not a mere range device to secure higher scores. It is in use on the Springfield rifles now coming from the armory in Massachusetts, and in con-

tradition to the opinion of the British N. R. A. Council that it is "an addition to a rifle which they do not consider practicable for a military arm on service," may be brought the opinion of marksmen here that in any form of carbine or rifle the screw may be and is made so ready of adjustment that it is not one whit behind the slide in rapidity of manipulation, while it is far more exact and reliable.

Sir Henry, in his somewhat remarkable letter says: "There will be no difficulty in their unshipping their screw adjustment, so that their rifles will come under our rules for our M. B. L. competitions, leaving their sights precisely like ours. They, as well as I, believe that the screw adjustment gives a certain advantage to those using them, as the slide can be moved more certainly by it, and with greater accuracy, and I have no doubt they will gain by it in the match as we shall not use it. We have yielded this advantage to them at their earnest solicitation, because we beat them last year, and not because we think it a matter of no importance; but we do not think they would be justified in putting our own men at a further disadvantage in the All-Comers' matches, for it is our duty to see that they are fairly dealt by."

It is indeed a display of more than usual conservatism that the British riflemen, having conceded to the Americans the use of a screw wind-gauge, should not adopt the same themselves. It is the coming improvement which must be made in any military rifle which hopes to hold its own. It is nonsense to suppose that the old open sight, even when given a pretense of improvement by any such clumsy arrangement as a sliding sight bar, is to continue in use when such important modifications and improvements are made in other parts and features of the rifle. Sir Henry ought to know this, and any skirmish match, such as the Duryea match at Creedmoor last year, where the men fired at random distances while in advance and retreat up and down the range, ought to convince the veteran marksman that the competitor using the screw-gauge is not at all handicapped as against the one using a slide-gauge. This is as near a semblance of real warfare as we can get, and it ought to settle the question as far as it can be determined by range experiments.

Sir Henry reverts to his favorite match rifle, and bewails the improvements made in small-bore weapons, as they have made the highest possible so easily attainable that there is no longer much competition when a marksman of judgment, armed with one of these latest weapons of precision, enters a match.

If the object is to keep in a liberal factor of uncertainty, then let the bow and arrow be revived for match purposes, and the match rifle laid aside as too mathematically correct.

While not for a moment wishing to reduce the M. B. L. to a mere target tickler instead of a service weapon, we respectfully urge that the screw-gauge has been proven fit for field work, and that while the improvement is sure to come, there is no better time than the present to introduce it upon the Wimbledon range.

## THE GREELEY RESCUE EXPEDITION.

THE expedition for the relief of Lieutenant Greeley is to leave New Foundland early next month. The rescuing party is to consist mainly of officers and enlisted men of the United States Army, and the only members who are familiar with Arctic life are three "hard ice men" to be taken from St. Johns. The steamship *Proteus* has been chartered for the occasion, and the orders to the expedition direct that every effort shall be made to reach Lieutenant Greeley by ship, but if this cannot be done, the winter is to be passed at Life Boat Cove or Littleton Island. After the winter has set in, attempts will be made to proceed northward by means of sledges. The instructions announce that the provisions of the Greeley party will be exhausted this autumn, although at the time of its departure and subsequently, it was stated that it was vitally needed for three years.

Two naturalists, Messrs. H. G. Dresel and A. A. Ackerman, accompany the expedition on board the United States steamer *Yantic*, which goes as a tender to the *Proteus*. Both gentlemen are ensigns in the navy, and have for the past eight months been acting as assistants in the United States National Museum at Washington, Mr. Dresel working on fishes, and Mr. Ackerman on mineralogy. Their equipment is mainly for the collection of marine fish and invertebrates.

It seems unfortunate, in view of the probable difficulty of reaching the Greeley party, that a selection had not been made of men better qualified for the work than the present party appear to be. If the views set forth in these columns as to the personnel of Arctic expeditions had been adopted, we cannot but think that this relief party would set out with much brighter prospects of success.

## THE ENGLISH ANGLING TOURNAMENT.

IN another column we give a full account of the last tournament at the Welsh Harp. From our report it will be seen that Mr. Reuben Wood gave a good account of himself, casting eighty-two and a half feet in the trout contest, and one hundred and eight in the salmon casting, taking both first prizes.

We had hoped to see accounts of this contest in the daily papers of New York the morning after it occurred, but so far they have not had a word of this international match, although we know that the secretary of the National Rod and Reel Association informed the agent of the New York Associated Press on the 9th that the contest would come off two days afterward. Had it been a base ball match or a game of marbles, or other interesting event, we would have seen it flashed across by cable in quick time. It really seems as if the great dailies are not aware of the interest taken by the angling public in these events, nor of the extent of that public. The fact that anglers are quiet gentlemen seems to hide the other fact that they are numerous.

It has been said that these tournaments are useless as tests of angling skill. This may be so, to some extent, but they are very useful in exhibiting excellence in all that they claim to do, which is in casting the fly, not in the capture of fish. It is barely possible that a man might learn to cast a fly who never saw a fish taken, and would therefore be ignorant of fishing. We have never heard of such a man, and do not believe he exists. The tournament is an excellent school for those who wish to learn the art of fly-casting, which is a most beautiful one, and the time will come when our daily papers may even rank it as high as a dog fight and give the details.

The *Fishing Gazette* Tournament, just held near London, was more fortunate in the matter of weather than last year, and it seems to have gone off smoothly, and to the satisfaction of all. Certainly it went to the satisfaction of Mr. Wood and the American delegation, and from a perusal of our correspondence on the subject it appears that the competitors were pleased also. The only complaint that "Uncle Reuben" has made is in a private letter to one of the *FOREST AND STREAM* staff, where he says that they nearly kill him with kindness over there, and that if he should eat and drink all that he is invited to, he would either have to be hooped or burst.

We hope to see some of our English anglers on this side of the water next October at the tournament of the National Rod and Reel Association. We can assure them of a cordial reception at a good time.

## RACING WEEK.

THE fact that a very large number of the most important yacht races about New York have taken place within the past week, obliges us to devote much more space than usual to this sport. It is in some respects unfortunate that so many of the important regattas come together, but there are other, and perhaps equally good, reasons why June is above all others the month for racing. It is important that *FOREST AND STREAM*, which is the yachtsman's journal of America, should give to its readers accounts of these races which shall be more intelligent than the hastily written reports in the daily papers, and at the same time be something more than a mere record of courses and times; and for this reason we have treated these important events very fully. It may be said, however, that occasions like the present only come once or twice a year, and that we are not often obliged to allow any one department to so far overrun its usual limits.

The widespread and rapidly increasing popularity of yachting is of comparatively recent growth, and is in part attributable to the interest which is now taken in canoeing, for the canoe is often the primer of the yachtsman. The canoeist who has cruised for two or three years and has thus learned something of the delights of a life on the water, feels an ambition to own a larger vessel, and is likely to become a Corinthian and obtain a single-handed cutter, and from this his development is rapid and only limited by the depth of his pocket. We rejoice to see the sport taking the high rank it does, for it is one which cultivates some of the highest qualities of both mind and body.

HIGH POINT QUAIL.—Advices from High Point, N. C., give us the pleasing intelligence that quail have done wonderfully well there during the past winter, and promise to be extremely abundant during the coming season. A part of this abundance is attributed to the non-shipping act of that State.

## Natural History.

### MORNING IN COUNTRY AND CITY.

OH, the beauties and delights of rural surroundings. The cheerful awakening from sound, healthful slumber. For instance, the time is about 4 A. M., or a little before. Dick, the game-cock, having gone to roost at sundown, suddenly awakens to a sense of his responsibility as boss of the entire premises, and sends out a clarion note that may be heard one mile away. Nine female geese and one old gander at once respond, with outstretched necks and voices shrill and deep. Three guinea hens, with their Brigham, take up the cry. The old peacock gets on his wings, sails up to the peak of the barn, and lets to the bottom of his lungs. A flock of ducks start up suddenly and waddle off to the creek, with much noisy quacking. Four milk-eyed, deer-faced Alderney cows commence a musical bellowing from the paddock on the flat by the creek; four fawn-like calves answer with responsive bleating from the calf-pasture above.

It is not yet 5 A. M. and the thrush, the robin, the song sparrow, the Phoebebird, the catbird, the pewee, the chickadee, the bluejay and the vireo are making the whole business very musical.

How about the awakening of a summer morning in New York? I am not so certain. I have tried both sides. I prefer the donkey engine to the guinea hen; the steam whistle to the peacock. The rattle and roar of the waking city is hardly more disturbing to nerves than the racket of a farmyard. I know something better.

"I know a spot where many things  
O'erhang the verdant base of Otter,  
Where wood-ducks build among the vines,  
That bend above the crystal water.

'Tis there the bluejay makes her nest,  
In thickest shade of water beeches;  
The fish-hawk, statueque in rest,  
Keeps guard o'er glassy pools and reaches."

Well, I am "going through the Wilderness." The Sairey Gamp meets me at Booneville the first week in July. The Sairey weighs 140 pounds. I noticed since I commenced writing light canoees in *FOREST AND STREAM*, several makers have discovered that a 16-pound canoe will carry a light canoeist and his duffle. Have they ever seen it done? Have they placed a few 10-pound canoees in the hands of skilled canoeists for lone, independent cruises in the North Woods and other glorious lake-dotted forests? Am I to meet one of them here and there, go into camp with him, divide the last ounce of provisions, and then paddle in company with him over the blessed clear waters, and over the inlets, outlets, etc.? I guess not. There is no 10, 11 or 12-pound cedar canoeist this season with five men in her. I think a 16-pound canoe would be safer and more comfortable. All the same, she is bound to go through. Maybe she will do better than her maker thinks. Possibly he has builded better than he knew. There is a possibility that I may turn out to be an old gray-headed expert in light canoeing. Maybe I have been there. Perhaps I have paddled a *kyak*, the most ticklish boat that ever floated a man. And I may get drowned. I shall certainly take in some duffings.

NESSMUK.

### EDIBLE CRABS OF THE UNITED STATES.

IN an interesting, though brief, article in the catalogue of marine invertebrates sent to the London Fisheries Exhibition, Mr. Richard Rathbun, of the U. S. National Museum, gives a list of the principal edible crabs of the United States, and the methods by which they are taken. He says: Over twenty species of crabs belonging to the coasts of the United States are now regarded as of greater or less practical importance to mankind. The most valuable of these are the blue crab (*Callinectes hastatus*), lady crab (*Platyonichus ocellatus*), stone crab (*Menippe mercenaria*), and rock crabs (*Cancer irroratus* and *borealis*), of the East coast, and the common crab, rock crab, and red crab (*Cancer magister*, *antennarius*, *productus*), of the Pacific coast. The remaining species are utilized simply as bait, or to a slight extent only as food.

The blue crab is the common edible crab of the Atlantic coast, and ranges from Massachusetts Bay to the Gulf of Mexico. The season for its fishery is of variable duration on different parts of the coast. At New York it lasts from May to October, while in Florida it begins as early as March and continues until December, or if the weather be mild, through the entire year. The crab is eaten in both the hard and soft-shell condition, but is greatly preferred and commands a much higher price, when in the latter state. This is contrary to what holds true with all of the other species of crabs upon our coast, as well as the lobster, which are only eaten when hard-shell. However, soft-shell crabs are seldom taken in marketable quantities except on the New Jersey coast, whence New York derives the greater part of its supplies. The crab fishery from New Jersey alone amounted to over \$160,000 in 1880. The blue crab also forms an excellent bait.

Several different appliances are used in the capture of blue crabs, the most common being the ordinary scoop or dipnet, also called crab net. For attracting the crabs from depths not easily reached by means of the dipnet, the fishermen resort to baited lines, without hooks, which are used singly or made up into trawls. For a small boat, each fisherman is to handle several single lines, which are hauled up at short intervals, the crabs being secured in a dipnet as they approach the surface. The crab-trawl, or trot-line, measures 250 to 700 feet in length, and has small lateral lines arranged at short distances apart. There are several methods of setting it. One is to anchor each end by means of weights, and another to attach the ends to long poles, which are run into trawls. For the latter, a man in a skiff rows continuously from end to end, hauling in the trawl lines and taking the crabs as in the first instance. On the Louisiana coast the trot-lines are stretched along the beaches, the lateral lines being thrown out into the water and hauled in at regular intervals. Seines, hoop-nets, baited with meat, and clam tongs are also occasionally employed for catching crabs. As the soft crabs remain in a semidomestic condition, and will not take the bait, they are secured almost entirely by means of scoop-nets from the beaches, or in the hands. Floating cars are extensively employed in some localities for keeping the hard crabs until they shall have cast their shells and become soft. Crabs are generally shipped to market in boxes, baskets or barrels, with or without packing. Some boxes are mainly preferred for the soft crabs, which are packed in

very snugly in order that they may stand transportation without injury, and so that the moisture will not run too freely from the gills. The crab catchers consist largely of women and children, especially in the Southern States.

In 1880, there were three crab canneries in the United States, two being located at Hampton, Virginia, and one at Oxford, Maryland. Only land crabs are canned, the supplies coming mainly from the neighborhood of the canneries. The process of canning crabs is somewhat similar to that for lobsters, as practiced on the New England coast. The crabs are boiled or steamed, after which the meats are removed from the hard parts and packed in one and two pound tins, the shells or carapaces being cleaned and sold with the meats, to serve as holders in making devilled crabs. The refuse is used as a manure.

The crab fisheries of the eastern coast of the United States, in 1880, amounted to \$328,000 (fishermen's prices), of which the greater part belonged to New Jersey, Delaware, Maryland and Virginia. South of Virginia, on the Atlantic coast, the crab fishery is of but slight importance at present; on the Gulf coast it amounts to about \$10,000 annually, and is mainly confined to Louisiana.

The rock and Jonah crabs (*Cancer irroratus* and *borealis*) are eaten only to a slight extent, probably for the reason that their range is co-extensive with that of the lobster, which is much more favorably regarded as an article of food. *Cancer irroratus* is caught at the mouth of Boston Harbor in small quantities, to supply the Boston markets, and both species are taken for the Newport market, in Narragansett Bay. They are also both used as bait for several species of fish.

The stone crab (*Menippe mercenaria*) is very much esteemed for eating, but nowhere occurs in sufficient abundance to supply more than a limited demand. The shell of this crab is thick and heavy, and the claws proportionately large, furnishing a generous supply of meat. The stone crab lives in holes in the mud, which it excavates, and in cracks between rocks, and is, therefore, somewhat difficult to capture. In taking them from their holes, which are sometimes very deep, the crabber thrusts down his arm, and seizing the occupant by the elbow of the nearest claw, draws him quickly out, allowing him to fall upon the ground, where he is better able to secure him without injury to himself. The crab offers stout resistance, and is sometimes taken out piecemeal. The crabber occasionally resorts to digging out his prey. This species is rarely shipped away from the seaport towns where it is taken, and is, therefore, seldom seen in the larger markets, excepting at Charleston, S. C., in the vicinity of which place it is abundant. On some parts of the Florida coast it furnishes the inhabitants with a considerable share of their food at certain seasons.

The lady crab (*Platyonichus ocellatus*) is occasionally taken for food on the Atlantic coast, in the same manner as the blue crab, but is rarely seen in the markets. In the Gulf of Mexico, and especially on the Louisiana coast, it is an important article of fishery, and large quantities are shipped to New Orleans every season. On the New England coast it is used as bait.

Six species of crabs are regarded as edible on the Pacific coast of the United States—the common market crab (*Cancer magister*), rock crab (*Cancer antennarius*), red crab (*Cancer productus*), kelp crab (*Epilatus productus*), yellow shore crab (*Libinia emarginata*), and purple shore crab (*Hemigrapsus oregonensis*). Only the *Cancer magister* is now extensively used as food, although the other two species of the same genus are said to be equally good as regards flavor. The *magister* is, however, the most abundant species in those localities and depths which are most frequented by the fishermen, and also averages somewhat larger in size. It is captured mainly on the sandy beaches of San Francisco Bay, by means of seines and crab nets, baited with fish and offal. The principal market is San Francisco. The season continues more or less throughout the year, but the summer catch is much larger than the winter. The red and rock crabs are most abundant on the rocky shores of the northern side of the Golden Gate, where but little fishing is done. The *Cancers* are not, apparently, caught elsewhere for food on the Pacific coast. The yellow shore crab and purple shore crab are these two split them upon wires and cook them over open fires. The kelp crabs are used by the natives of the northwest coast. A large "red rock crab" (*Echinococcus setimanus*), living about the Farallone Islands, off San Francisco, is occasionally brought to the markets of that city as a curiosity, and sometimes brings as high a price as ten dollars each. Species of *Chionoreles* and *Lithodes* are eaten by the natives of Alaska.

ALBINO ROBINS.—About half a mile from this place there keeps a white robin, the bird is entirely white with the exception of a few wing feathers and one or two feathers in the tail. That this bird is a robin is certain, its flight and "chirrup" proves that. It is very tame, allowing a person to advance within a few feet of it. This is its second appearance in this locality, last year there were more dark feathers in its plumage than now. It is evidently a male. Another instance. Early this spring I noticed a robin with more than its usual allowance of white in its plumage. I shot the bird, and found the tail to be entirely white, the breast was also nearly white, and the wings and the white spots on the wings, back and head. This bird was also a male. In this case, and in the preceding one, other robins were making war upon their unnatural brothers. Now, was this a freak of nature, or were these birds hybrids? The white bird can be seen almost any time, and the one I shot I have mounted.—H. B. (Glasco, N. Y. June 18).

AMATEUR PHOTOGRAPH EXCHANGE.—Sherbrooke, Quebec, Canada.—*Editor Forest and Stream*: One of the most valued items of my camp kit during the past three years has been a photographic outfit. I have been thinking that an exchange of cards with others who were as well versed in the art as agreeable. I have a dozen or more that I think would be of interest to lovers of the wildwood, and which I would be glad to send to any of your readers who have copies of their own work to spare.—JOS. G. WALTON.

A LARGE CAT.—A wildcat weighing thirty-five pounds was recently caught and brought into Nashville by Reuben Cain, of Chatham county. It was a superb specimen of the species, and should have been secured for one of the zoological collections in the North. Reuben said: "He was regular hell in harness, and most er got off, but for Nanny, my wife. She's more nor any ten cats in Tennessee."—J. D. H.

silly enough to believe that he could find good shooting and fishing in the streets and gutters of cities, towns and villages. "Didymus" admits that he "wandered in an unsatisfactory way nearly all over the State," and there are such wanderers to be found everywhere. From his own statements, it is evidently confirmed in his observations to ruin lines of travel, where none, when a "sportsman" ("sportsmen" have been shooting at every living thing clothed with feathers for the last eighteen years. It is evident that he is not a sportsman or a competent judge, for he states that he "actually shot six times at three wriggling snipe before he got them in his pocket." He refers to fishing at Ocala, and unless he fished in a rain-water barrel for wigglers, he could not find fishing within six miles of that place. He refers to catching fish at when a "sportsman" ("sportsman") reaches Ocala, "he doesn't find turkeys gobbling at him from every brush." Such a statement is, to say the least, silly, if it did not convey the idea that such statement had been published by some interested party. Every winter, samples of "sportsmen" like "D." visit the State, and are disappointed, and misrepresent it because they cannot shoot deer, quail and turkeys in the public streets, and capture fish in every mud hole. Game and fish exist in endless quantities in certain portions of Florida, but sportsmen must visit the localities where they exist.

From the tenor of "D.'s" communication it is evident that he is interested in a "hotel" enterprise in St. Augustine, or has "land" to sell near the "Fort," and used your columns to advertise his wares. The whole communication "smells of the shop." "D." asserts "that fishing and shooting in the neighborhood of St. Augustine is far better than in any place I have ever been." This statement is evidence that he has not visited the best "shooting and fishing places" in the State, and that he is ignorant. Any person residing in St. Augustine would have informed "D." that Matanzas, Halifax, and Indian River inlets, far exceed the neighborhood of St. Augustine for fishing. If he had inquired of any sportsman where he should go to make a bag or kill a deer, he would have been directed to Diego plains. He complains about sportsmen (sic) being prevented from shooting in the neighborhood of St. Augustine. This is a wise provision, for some "sportsmen" cannot distinguish the difference between a tame duck and a mallard, or an old hen from a pheasant, and some of them are so careless with the use of firearms, that to protect the lives of residents protect life laws are a necessity.

To me it is evident that "D." has not visited the "unsportsman" "shooting and fishing" parts of Florida, and that he has used your columns to benefit a hotel in *future*. If "D." like Dr. Ferber, Dr. Heusball, or Ward, of Grayling, Mich., will follow in my tracks, cut loose from hotels, "hog and hominy," and leave his "fastidiousness" in a first-class hotel, he will tell a different story, and apologize to your readers for occupying valuable space with mere twaddle, and a puff regarding a hotel in embryo, and lots to sell near the "Fort." AT FRESCO.

JACKSONVILLE, FLA., June 11, 1889.

### Editor Forest and Stream:

Please allow me a word in defense of what I said about the local laws of St. Augustine. This question, like most others, has two sides, and it is necessary to take both more explicit in my statements. The prohibitory law which you commend, if I understand it, has nothing to do with the "extermination" that you speak of "when the rash of Northern visitors first set in," but was a very recent enactment, and instigated by a man brimful of bitter prejudices, who is affected by the sight of a gun as a mad dog is by a stick. This man, who enjoys access to the top of his bent "with a stick and a string with a worm at one end and a—etc., etc., but he will not interfere with your enjoyment if it happens to be something that he approves of. If the prohibitory law had been sensibly framed it would meet even my approval, but as it stands, it certainly does not.

To prohibit shooting within a radius of half a mile from the City Hall would be very well, but the city limits are the city limits, and it is no use trying to draw a line to include the marshes nearly to the ocean, and extend a great distance above the city. On these vast tracts of marsh lands there are a great many birds, but as it is difficult to get at them there is no danger of extermination. That idea came from the fact that, while there was no law to prevent it, every boy who could carry a gun was constantly popping at the birds on the flats almost within a stone's throw of the City Hall, and they found it difficult to find them and let them go unmolested feeding grounds; they were not exterminated.

That the privilege of shooting plover on the marshes a mile or more above the city can do anything more in the way of extermination than the same privilege would in any other place I fail to see. Consideration for the birds had nothing to do with the enactment of this law. If the "city fathers" care anything for the birds why is there not a law to prevent the infamous business of robbing birds' nests? This wholesale "slaughter of the innocents" is universal here, not the slightest effort is made to stop it. A mocking-bird is lucky if she can find a place for her nest that these impudent, annoying little rascals cannot reach. But the singing birds are not the only sufferers, for the depredations of these little devils extend out into the marshes. One, at least, of the rail tribe (a large bird) breeds here in great numbers.

A few weeks ago a man surprised a small gang of these exterminators near his fence; one was carrying an old bird which they had killed with a stick while on the nest, and another had the eggs in his hat. They roam and steal wherever they choose, and the only law they have to fear is a cross dog.

NEW YORK, June 15.

DRYDMUS.

[Our correspondents appear to have taken too seriously some things which "Didymus" wrote in jocular mood. He is not a greenhorn, nor, as one writer unkindly suggests, a "dude," but a gentleman who has traveled extensively, and as a sportsman can probably hold his gun as "dead on" as the next man. If his praises of old St. Augustine appear too lush, they are at least pardonable, and it is not necessary to ascribe them to any sordid motives. It is one of the most charming characteristics of Florida citizens to exalt some particular point in the State, and in comparison with it to deride all other localities as in some respect or another inferior. The State has been sufficiently vindicated by those who have replied to "Didymus," and this discussion carried as far as can be useful. To prolong it would probably not affect next winter's Florida travel. When "Didymus" knows more about St. Augustine he will agree with us about the wisdom of the law referred to.]

animal. In like manner I cannot believe that the muzzle-loader is the best rifle, because it is a little more accurate and has a slightly flatter trajectory. Let my hunting rifle be a "breach-loader loaded from the muzzle" (sometimes), or a "muzzle-loader loaded from the breech," but not a gun through the barrel of which daylight cannot be made to shine without several minutes' work with a large fraction of a blacksmith's set of tools.

L. I. FLOWER.

CAMBRIDGE, N. B.

### SENSIBLE VIRGINIANS.

THERE were a good many sportsmen here this week. As I write, a large school has just lifted anchor, and has headed for the Virginia capes with some twenty-five of the Baltimore Sporting Club on board. She is bound for a month's cruise. Another school from Suffolk, Virginia, with some twenty lovers of the gun and rod, has put in an appearance, and will leave to-morrow for Hog and Monacan islands. The Richmond, Va., Club will commence their annual cruise the first of next week, as also will the Norfolk Sporting Club. It is no wonder that the ladies wander disconsolately alone at the watering places, for this custom of the Virginians of leasing a vessel and spending their mid-summer holiday in a stag party abroad, has grown steadily in popularity, and consequently the men are represented at the springs by beardless boys, or by those effeminate young men who avoid the sun and wind, as if it bore on its beams and breeze the pestilence itself.

Besides, the Virginians find it not only more enjoyable, but cheaper. Twenty-five young men clubbing together can, upon paying a sum of twenty-five dollars apiece, rent a schooner, provision it, and enjoy a delightful, free Bohemian life for a month, when it would cost them, if they times that amount to go to the springs, and they would not have half the enjoyment either. This place is the rendezvous of all of the clubs, and they stop going and returning. The rough-looking sailor grub of the day is changed into a gorgeous butterfly at night, with full dress suit, who circles in the "mazy," as Mr. Dick Swiveller expresses it.

The fishing is unusually fine this summer, and trout, sheephead and hogfish are caught in great quantities, close to the hotel. I saw a party of five return from a fishing excursion over across the Rip Raps, who had averaged eight fish to the line, all of good size, too.

Sportsmen just from Cobb's Island and vicinity, report the robin snipe as having disappeared, but that the curlew, willet and yellow-leg snipe are arriving in good quantities, and the sport is fair.

CHASSEUR.

OLD POINT COMFORT, VA., June 22.

### MY FIRST WOODCOCK.

IN after years the matron mused smilingly on her first hunt; the statesman on his first spear; the mother on her first child. Delicious memories of all of them, and happy are they to whom they can come unalloyed with sorrow. In my own heart lingers one fond memory that, perhaps, lacks the sweetness of the first, the fervor of the second, the beautiful frenzy of the third: yet to me it is as thrilling as any or all of these, for it takes me back to that happiest day of my boyhood when I shot my first woodcock.

That prince of sportsmen and gentlemen, Prof. Beach, was then the major in northern Columbia county, N. Y., near the rugged hills of Green River, that region long since immortalized by William Cullen Bryant. We met often and fished, hunted, tramped, did everything together. My boyish enthusiasm and wild love for nature pleased him as much as his wonderful culture and genius charmed me; from our earliest meeting there was a tender and mysterious bond of sympathy between us, that made us the most congenial of companions, until the premature end of his sad and unhappy life.

One perfect morning early in September, a day of vastly more moment to me than that which witnessed the victory at Marathon, or even the later episode of the Charter Oak, we, Prof. Beach and I, arose bright and early, breakfasted, and went off over the hills together after woodcock. He was armed with his light, trusty shotgun. I with my well-calculated "L" had shot (and I blush to record it) as a fowling-piece as the formidable cannon made by one Krupp, or some other jackpaws with an equally heathenish name.

We tramped through swamp and swale nearly all the forenoon, each burning about the same quantity of powder, though with vastly different results: he had half a score of handsome woodcock, and I—nothing, alas! but one miserable blue Jay that I had shot (and I blush to record it) sitting stock still. A burning shame!

The Professor made numerous puns about my prodigious shooting and deficient hitting, for I made it a matter of religion to blaze furiously away at whatever crossed the range of my vision, in dignified disregard of all considerations of distance or other disadvantage. I had long since abandoned all hope of ever hitting anything smaller than the woods, or the Professor's retriever, yet "try again" was the motto emblazoned on my escutcheon, and I swore inwardly with a wild sort of a deacon's oath that I would try until at least one genuine game bird perished.

When, as a reward to my pertinacity, success finally came; of the three, the Professor, the bird and your humble servant, I was the most surprised.

Late in the afternoon, when fatigue and failure had made me desperate, its capacity for producing smoke and, with each discharge, put the combined efforts of a whole battery to shame. I attributed the silence of the Professor's gun to the fog of smoke which enveloped the whole clump from mine. But I was mistaken.

"You've got him!" yelled the Professor.

"Got what?" I demanded.

"Why, the woodcock; that's what you fired at, wasn't it?"

Great essence of smoke! I surely must have frightened it to death. I didn't see it when I fired, or anything else for that matter, and certainly couldn't have hit it. I had emptied my gun from mere force of habit, into space, with no other intention than such a disposal of its contents. However, it was hit and severely, too, for when we dressed it the next day, its unfortunate skin completely resembled a horse-radish grater.

Years have passed since then; long, weary years; but I think I live that day over again, in memory, far oftener than any other day of my life.

LEW VANDERPOEL.

### HUNTING RIFLE SIGHTS.

FOR the benefit of those that may be interested I inclose herewith a rough sketch of a hunting rifle sight that I have found to be very effective, with the following description:

I have always had them forged from solid steel, the upper part standing at an angle with the bar (which bar dovetails into the barrel), and leaning to the rear, so as to prevent any chance for light to reflect back into the eye, as it might do if this part were vertical.

This upper part is made solid, and then drilled out accurately with a  $\frac{1}{8}$  or  $\frac{1}{4}$ -inch drill, according to the gun

and the size of "horns" required, and a fine slit is sawed through accurately on top and in the middle, separating the metal into the two horns, and a fine notch is cut in the bottom of the circle, vertically under this slit, for the sight notch. This "notch" may be of any form, according to the fancy of the shooter.

The "horns" are now filed up to shape as shown in the sketch, their rear face being left a dead flat, and their front faces being beveled off toward the inside, so as to bring them down to almost a knife-edge on the edges on the office. This prevents any chance for light to reflect back from the edges of this office and strike into the eye.

Directly in front of the slot or notch a deep hole is drilled, and this causes the notch always to be in shadow, with no light to glimmer on its edges and blur the sight.

Now, the horns and office between them give quite a field of view, and (if the gun fits the man) the front sight is seen instantly on the gun being brought to the face, and but a slight movement is necessary to bring the front bead accurately into the rear notch, and still have the game in the field of view. The line through the fine slit on top of the horns and the hole gives a vertical line by which to hold the gun level, and also a line on which to take a coarser sight, as the game is further off, and there being no raising slide to foot with and so lose time, the sight is almost instantaneous.

By experiment with a graduated peep sight and one of these rear sights, I found exactly how coarse a sight to take over the fixed rear sight up to 500 yards. At 500 yards I had only to sight in the fine slit between the horns and ignore the bottom notch, and I could, therefore (after I had learned from the use of the peep sight at fixed targets), take my sight fine or coarse at once, according as I judged the game to be far or near.

It is my experience that adjustable rear sights are a "delusion and a snare" for ordinary hunting. They may be all very well at times when game is quiet and knows nothing of the hunter's proximity, and he then has time to accurately judge the distance and set his sights accordingly; but under ordinary circumstances this is almost impossible, and I have known the game to be lost by the loss of time in adjusting sights. With a fixed rear sight (as nearly point blank as may be), the hunter knows he must "allow for distance" by a finer or coarser sight, and he can soon learn how much to allow and do it almost instinctively, and the temptation to adjust sights is not there to disconcert the shooter.

I have always used a "silver bead" front sight with this rear sight, and have made it the rule to get both down as close to the barrel as possible, and still see them both clearly and quickly over the breech mechanism; by this the deviation caused by the piece not being held level is reduced to a minimum, and the sights are both made better able to stand rough usage.

After aligning the rear sight accurately, it is fastened in permanently and a reference mark made on sight and barrel for future use, should the sight have to be removed or become deranged by accident.

I have never shot without a rear sight, but I know it is done in some of the armies of Europe at distances over 100 yards and at long ranges. The soldier is taught to sight over the hump of his left hand held over the barrel and bent to greater or less height according to the distance; this might or might not answer for hunting purposes, according to the amount of skill acquired by the shooter. I never have tried it, preferring the fine or coarse sight through the back-horn sight herein described.

Nothing original is claimed for this sight. It used to be very common on the Pacific coast and in Arizona, but as I never have seen one for sale or advertised as made by gunsmiths, it is sent as of possible value and interest to brother sportsmen in the East.

FORT McKINNEY, Wyoming.

INFORMATION WANTED.—While on a trip across Lake Umbagog two years ago, I was informed that the lower end of the lake had been seeded down to wild rice by a New York sportsman's club. I have since made inquiries as to the fact, but can get no information. Can you tell me anything in regard to it? I am contemplating a duck and grouse shooting trip this fall and thought of going to Umbagog or the Rangekeys. Will you or some of your many readers advise me as to the best point to strike, also the best month in the fall to go?—G. N. K. (Lancaster, N. H., June 19).

### KYNOCHELLS.

Editor Forest and Stream:

Offering to a communication in your issue of 21st inst. by "D." of Monticore, Wis., concerning Kynoch shells, it is apparent to me, as doubtless it will be to many other sportsmen who have not only thoroughly tested, but habitually use the "Perfect" shells, that "D.'s" trouble was caused by the simple fact that his guns are not correctly chambered. With paper or thick brass shells, this fault would not matter so much, but the "Perfects" being thin and pliable, they of course swell to fit, and if the chamber is slightly larger at the forward end the shells will naturally be difficult to extract. When they first appeared I was prejudiced against them, notwithstanding their high repute with English sportsmen, and was first prompted to try them from motives of curiosity. I was, however, so agreeably surprised at the result, that I now use no others, and find they work well in every respect, and have so many advantages over both paper and the thick brass, that to my mind there can be little doubt they will soon be the rage here, as from perusal of the English sporting papers I judge them to be abroad. H. V. L.

WEST HOBOKEN, N. J., June 22.

Editor Forest and Stream:

As a matter of course, all readers of your interesting and instructive journal feel in duty bound to inspect and test whatever of implements or apparatus are found advertised therein, more especially when favorably noticed by the editor.

Being something of a connoisseur in fine breech-loading shotguns, you will readily see how easy and natural it was for me, as soon as I saw the advertisement of the Kynoch patent "perfect" brassshell, to begin at once to consider the "ways and means" whereby a supply of the aforesaid "perfect" might be reduced to possession for the purpose of inspection and trial. An opportunity soon presented itself, and I became the fortunate possessor of twenty-five of the coveted article, and having loaded them with three drams Hazard's duck-shooting No. 3 grain, and one and one-eighth ounces No. 10, I repaired to our range for the purpose of testing them on our weekly glass ball shoot. A friend of mine, Mr. E. P. W., prepared the same number in like manner (the shells were 12 gauge). At the conclusion of our contest we were surprised to find that about one-fourth of our entire number had burst or broken off at the point where the reinforcement and body of the shell meet, or about one-quarter of an inch from the head.

I reloaded what remained uninjured, and at the conclusion of the second trial found as many more ruined in the same manner. I then determined to consign the remainder to the seclusion of the back yard.

I inclose a shell that you may see the better understand the matter and see exactly how it is done. These shells were tried in my Parker, in Mr. W.'s Fox and in guns of other manufacture, and in all cases fitted the chamber nicely, with the exception of being a trifle close in the Fox, and they in fact went a little close in all, so that it could not be due to any misfit in chambering. Taking into consideration these facts, we concluded, Mr. Editor, that the Kynoch is extremely a failure, at least when a permanent investment. Now I believe a nice, light, durable shell is "a consummation devoutly to be wished," and the field appears to be open to some smart, enterprising Yankee for the exercise of his ingenuity, and whoever first brings out a light, durable shell will undoubtedly reap a rich and well-deserved harvest of sheaves. The metallic shell now in common use is far too heavy, no doubt about it, and must soon be replaced by something lighter and neater, and the sooner the better.

MEDICUS II.

VISALHAVEN, Me., June 20.

### INCIDENTS OF A JERSEY QUAIL HUNT.

"DEPARTED" this life, June 3, 1881, Nellie, in the twelfth year of her age, lamented by her owner and his family, and acknowledged, by all who knew her, to be one of the best red Irish setter bitches in the house or field, that this country or any other ever knew. This should be the epitaph placed above the head of one of the most remarkable dogs in the field. She possessed no tricks; but when she was ordered to "fetch" or "bring," at the situation, her instructions necessary as to where and how to hunt, either quail, pheasant, woodcock or snipe, for she was equally good in hunting all. She was what some of the inexperienced would call a "winder." To make this explicit, I will illustrate. Some dogs hunt with their noses close to the ground (these are called "trailers"), in order to strike the scent of a covey, as they break from the brush to feed, in the first place.

Nellie was too high-minded for this, and would jump into a ten-acre field, throw her head up in the wind, sniff once or twice, and if the birds were out she would go to them without further ceremony, and stay there until you came up, if she had to wait for a week. When on a point, you could lay a cane from the end of her nose to the tip of her tail—straight as an arrow, and as still as a poker she stood.

On one occasion, when she was hunting in the fall at Cape May, some years ago, with Nellie for my "right bower," and several other of the canine species to help fill the bill, my companion was Charles Clark. The dogs after ranging over two or three fields and finding nothing, at last brought up to a high rail fence, dividing the field we were in from the adjoining farm. Nell, the fleetest-footed of all, sprang on the top rail, and the moment she got there came to a halt, the back of her neck and forth to keep from falling, while the other dogs sprang over without winding, and flushed a covey of about twenty-five quail. Never in my experience had I seen such a point, so ridiculous it appeared to me that I forgot to shoot, while Charlie got one with each barrel, which Nell retrieved one after the other in fine style.

We marked the rest of the covey, which flew and scattered in great numbers, and then they "blew" or "flushed" grass. Nell found and pointed about two-thirds of the birds we killed out of that bunch, and we went on seeking for another. Before the day was over she came to disgrace in the following manner: About two o'clock in the afternoon the dogs drew up on a covey in the middle of a stubble field, backing nicely, and as they rose, we cut five from the number with the first two barrels, and got a single one with the third. The last bird I shot dropped in the edge of a little swamp. Nell started at my command to retrieve this one, which she found, and came capering up to me with the bird in her mouth, sat down on her haunches, looked up in my face with expressive eyes, as if to say, "haven't I done it?" and as I reached out my hand to take the bird, she opened her mouth, and—and the bird flew off

and settled in the thickest part of the swamp. She looked foolish, but that was the last crippled bird that ever got away from her, because ever after she would pinch them enough to be sure that they would not get off after her trouble in retrieving.

We bagged forty-nine birds that day, and I went back to the city entirely satisfied with the day's sport. One more illustration of this bird's wonderful sagacity and I will close. About three years ago, she had a litter of five red pups. Among the litter one, Ned, at an early age began to show great promise. In the back part of the yard, where the kennel was built, and in one of the stalls could be seen Nellie with her family. Master Ned, full of curiosity, was roaming around the yard looking and sniffing for stray pieces of garbage, and while thus engaged a sparrow lit in the yard and began to make a breakfast of the scattered crumbs. The moment Ned saw the bird—the first in his life—he began with cat-like tread and little tail straightened out to approach the sparrow, which was entirely unconscious of the danger that threatened, being busy with his meal. Ned kept up his alternate crawling and standing, and at last pounced upon the luckless sparrow, and with great triumph bears it to his mother in the kennel. As he came tumbling in, she took him by the nape of the neck and shook him until the air was filled with his dismal howls, but he did not but he did not drop the sparrow. The only way I could interpret this action of Ned was, that it was like that of a mother whose child has been guilty of some misdeed, and to whom she desired to give a moral lesson that would be lasting in its effect. By shaking Master Ned, she desired him to know this was not the kind of game that a scion of a noble house should bother with—a bird not worthy of notice. Ned at this time is a first-class dog, but not to be compared with his mother.

I could relate innumerable instances of the sagacity and affection of this beloved and faithful dog. Kind and affectionate to children, she was a terror to beggars.

Never brought prominently before the sporting public, yet she had sufficient "pints" to carry off the first premium in the bench shows in which she was entered, to wit: Centennial Dog Show and the Philadelphia Kennel Club Show.

CAMDEN, N. J.

J. S. M.

**CONNECTICUT RAIL LAW.**—We are indebted to the courtesy of Dr. J. W. Alsop, of Middletown, Conn., for the following, which comprise all the game legislation of Connecticut for the year. Chapter XLII, approved March 28, 1893. "Section 1. It shall be unlawful for any person to hunt, kill, destroy, or attempt to destroy any game, commonly called birds, in the counties of New Haven, Fairfield and Litchfield, between the first day of January and the twentieth day of August; and every person so offending shall be fined not more than twenty-five dollars for each offense. Section 2. The provisions of chapter one hundred and twenty-one of the public acts of 1882 (page 201) shall not apply to the counties of New Haven, Fairfield and Litchfield. This it will be seen allows rail shooting in August in the counties named. Elsewhere the open season remains as before, from September 12 to January 1. The other law, approved May 3, relates to game-wardens, and is as follows: "Section 1. The selectmen of every town shall appoint two or more persons to be game-wardens, who shall assist in detecting and prosecuting offenses against the game laws, and shall be paid their salaries out of the town treasury. Section 2. Game-wardens shall hold their office for the term of two years from date of their appointment, and shall have the same powers as other officers to arrest for the violation of any law relating to game." The effort to open summer woodcock shooting was defeated. Dr. Alsop was chairman of the Senate Committee on Agriculture to which the game bills are referred, and to his careful attention Connecticut sportsmen owe very much for the excellence of the present law.

**TENNESSEE NOTES.**—For almost to the day, the noisy party (for a pair of) woodpeckers have arrived to take possession of the bird house, and are now making their home alongside of my bedroom. Every year for the past five I have mentioned their arrival to the readers of the *FOREST AND STREAM*, because their constancy of purpose, and untiring energy, have served as a valuable lesson to me. How many times the actual visitors have changed, or more properly, which generation of the original pair are now by choice, is a mystery. But I have never yet known that of the skilled manner, they arrive, and seem to know the exact place to stop at. One year a company of bluebirds had taken possession of the nest, and the woodpeckers had a long and desperate fight before driving them away, but so effectually were they chastised, that they never tried it again. From various sources I learn that the nesting and hatching of quail has been unprecedentedly large this spring, and, barring accident, there will be great quantities of them next season. I noticed while out driving a few days ago, that there are myriads of doves this season. The "Nimrods" around Nashville prefer this to any class of shooting they can get. The birds are strong, fly very fast and are hard to hit. No dog is used in hunting them, though their habits are such that when their watering place is discovered, they will go every day despite any amount of shooting at them. Sportsmen by the million infest the forest regions, and even near the city a capital day's shooting could be had after them.—J. D. H., (Nashville, Tenn., June 16).

**THE NEW YORK ASSOCIATION INCORPORATED.**—Articles of incorporation of the New York Association for the Protection of Game were filed last week. The objects of the corporation are to advocate the passage of suitable laws for the preservation of game and certain varieties of fish, to enforce such laws and other existing game laws, and to promote a healthy public opinion in relation thereto. An important object of the association is to promote discussion by its members. The incorporators are Robert B. Roosevelt, Benjamin L. Ludington, Charles E. Whitehead, John W. Green, John W. Balfour, Chas. E. Strong, Royal Phelps, Paul E. Thibaud, Stephen A. Main, Alfred Wagstaff, Wm. M. Fliess, John H. Rhoades, Clinton Gilbert, J. Nelson Tappan, James Royall, Thomas N. Cuthbert, H. C. Falmesest, Henry J. Scudder, Henry T. Carey, James Curphey, Townsend Cox and Roland Redmond.

**SPRING CHICKEN CLUB.**—Permit me to call your attention to the organization of the Spring Chicken Gun Club, of Beaver Falls, Pa. The following are the names of the members: J. P. Kurtz, President; H. W. Nair, Secretary and Treasurer; W. H. Girm, D. L. Wilkinson, Bay E. Suris, Ernest Mayer, J. A. Tatro, Joseph Otto, S. R. Patter-

son, H. C. Patterson, Ed. Hutchison; honorary members, Jas. M. Fessenden and Mr. Smith. Limited to fourteen members. The object of the club is to promote skill in the use of the shotgun and the rifle, the preservation of game and game fish, the recreation of its members by encouraging healthful field and target practice; the cultivation of fraternal and good feeling toward all other such organizations. The club has secured a very desirable ground from H. T. and J. Reeves, of this place. The ground is just outside of the borough limits, at the upper end of town, and we anticipate a very pleasant time every two weeks during the summer. The regular day is Wednesday afternoon.—Bad Shot (Beaver Falls, Pa., June 18).

**NEW METHOD OF GAME DESTRUCTION.**—While in Dakota last fall I found it was customary to rob game birds and ducks' nests. In a local paper I saw an item about one man who had secured over 5,000 duck eggs from Ranney's Lake, one of the small lakes with which that country abounds. I stopped at one farm-house where the woman said her two small children had brought in sixty-eight prairie chicken eggs in one day, and she had cooked the fresh ones. I did what I could to try and educate them differently. Some attention should be paid to it this season or we shall miss our usual fall and spring sport.—M. (Hastings, La., June 19).

**PHILADELPHIA NOTES.**—There is a dearth of shooting news in our city, owing, of course, to its being an inter-season. It seems impossible to entirely break up the illegal killing of woodcock before July, and we every now and then hear of their being shot before the broods have separated, while yet we must confess the birds were nearly grown. The only way out of the difficulty is to do away with all summer shooting of woodcock, and we feel the majority of thinking men will agree that it will be best for all.—Homo (Philadelphia, June 23).

**GAME PROTECTOR IN NEW YORK.**—State Game Protector J. S. Collett is at No. 391 Fifth street, Brooklyn, where he may be seen or written to in reference to any violation of the game laws in this vicinity.

**BURLINGTON, IOWA, JUNE 18.**—The outlook for next season seems very promising, as we are having continual rains, and an unusual number of ducks are breeding on the islands and lowlands opposite this place.—W.

**QUAIL.**—Moscow, June 18.—The quail in this vicinity are doing well, many young ones are now to be seen. The rabbits and squirrels are plentiful, and the prospects for fall hunting are good.—G. G. J.

## Sea and River Fishing.

To insure prompt attention, communications should be addressed to the *Forest and Stream* Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

**ANGLING RESORTS.**—We shall be glad to have for publication notes of good fishing localities. Will not our correspondents favor us with notes of desirable points for angling excursions?

### IMPROVED BLACK BASS TACKLE.

BY DR. J. A. HENSHALL.

IT is a source of great pleasure and satisfaction to the angler at the present day to note the march of improvement in the manufacture of fine fishing tackle, and to observe the commendable enterprise manifested by the manufacturers in producing light, elegant and suitable implements of the craft. Indeed, the skill, study, ingenuity and good taste employed in this branch of the art is scarcely excelled in any other; all of which is highly gratifying, for it would seem to imply that the love and practice of angling has taken deep root, and that fine fishing and scientific angling are in a healthy state of growth and development. Especially have black bass caught the fancy of the angler, for in no other direction has this progressive feature been so marked as in the production of improved implements for black bass fishing during the last five years. Among some of the recent improvements in tools and tackle, designed more especially for black bass fishing, I take great pleasure in describing several which I have lately had the opportunity of examining and testing.

While the tapered, enameled silk line is all that can be wished for fly-fishing, the lines heretofore furnished for bait fishing are open to several objections. In my "Book of the Black Bass," in reference to this matter, I said: "The perfect line for black bass bait-fishing is yet in the future. The best manufactured at present is the smallest size (letter G, or No. 5) half-braided raw silk line, and is, I believe, the only one of just one half the caliber, and as tightly and closely braided, and as firm and hard as the twisted, or laid Japanese grass line, it would be all that could be desired for a bait line. I have great hopes that a line of this description will soon be made, as I have invited the attention of Henry Hall & Sons to this subject.

"A bait line for casting the minnow should, in the first place, be composed of very best material, of which, in this case, is raw silk. It should be of very small caliber, the smallest that can be made consistent with strength, and the raw silk fulfills this condition better than any other material. It should be very hard, compact and closely braided. These conditions secure a line that renders freely and easily, is quite elastic, and at the same time absorbs but little water, and will not kink or smart on casting. The line should, moreover, be tinted some suitable color, to render it as nearly invisible as possible, for it must be remembered that we cannot use a gut leader in casting a minnow."

The Henry Hall & Sons Company, of Highland Mills, N. Y., recently sent me two lines, one raw silk, the other boiled or dressed silk, marked size "H," or No. 6, saying: "We think this line is something new what you speak of in your book, but will be pleased to satisfy when you thoroughly test it and report. We are not quite ready to put this line on the market, but after hearing from you (if report is favorable) will put it in hand at once."

I have thoroughly tested both these lines, and find them the best yet made for the purpose. They are round, hard, and very closely braided, absorb but little water, and consequently render very freely in casting. They will be liked with delight by the fisher as they are very welcome desiderata. They seem to contain the same amount of stock as

the "G" line, but being more closely braided the caliber is reduced, while the strength remains the same. The raw silk line sustained a strain of 8 pounds, and the dressed silk 6 1/2 pounds, which is at least three times the strength actually required with a pliant rod. I have often caught bass averaging three pounds with a line that would not sustain a pound dead weight.

The dressed silk line is a quaker drab or light chocolate color, and is very light, weighing not quite 2 grains to the yard, 300 feet weighing 185 grains. It is of the same caliber as the No. 1 sea grass line, and fully as strong. The raw silk line is a trifle larger in caliber, though not so large as the "G" line, or sea grass No. 2, but as strong as either. It weighs about 24 grains the yard, or about 225 grains to 100 yards, and is white, mottled with green, the usual color of raw silk lines. It is to be hoped that the company will soon put these lines in the hands of dealers who will promptly bring them to the notice of anglers by their usual custom of advertising in *FOREST AND STREAM*.

Abney & Imbrie's new compensating device, as applied to their multiplying black bass reels, is a very desirable feature, causing the spool to revolve as swiftly and noiselessly as though running on jewels; and as the bearings become worn, they can be adjusted and compensated by the device mentioned. This consists of conical recesses in the ends of the shaft, or axis of the spool, into which are fitted the conical ends of screw-pivots, which are tapped through the center of each outside plate, or disk. The heads of these pivot-screws are covered by caps in the usual manner, by removing which, the pivots can be screwed in or out, adjusting their conical points, perfectly, to the conical recesses of the shaft. By this compensating device the reel can be made to run smoothly always, thus avoiding the wobbling, unsteady and noisy working of the spool in ordinary reels after they become worn. This improvement leaves nothing more to be desired in this respect in this class of reels.

This compensating principle I know to be a good one, and is the same in effect as one applied to reels more than thirty years ago by Mr. Snyder, now dead, formerly a watch-maker of Paris, Ky., and a contemporary of Mr. Meek, of Frankfort, Ky. The reels of both of these makers were built upon the same plan, but Mr. Snyder constructed his spool shaft with beveled, or conical, ends, fitting into conical recesses in the outside plates, and the device of Abney & Imbrie's method, but subserving the same purpose.

I have lately examined one of Snyder's reels that has been in constant use for more than thirty years, which, by virtue of the compensating device, runs as smoothly to-day as when first made. From this fact it follows that Abney & Imbrie are to be congratulated for making a happy hit. I have also recently examined and tested a black bass reel of a new superior shape, made by another mechanic in the number of the Kentucky Fish Commission, fitted with Snyder's compensating device and an automatic thumb for casting (invented by myself), which works admirably in every way.

The new and novel treble multiplying reel and automatic drag, made by Wm. Mills & Son, is the best reel yet devised for fly-fishing for black bass. As they truly say: "It has all the advantages of the old reel, but it does not cost more than its value as a multiplier." The reel, in shape, approaches very nearly the ordinary click reel, but more particularly the Leonard reel. It is quite light, a 40-yard reel weighing but little more than four ounces, and is made entirely of metal, oride and nickel-plate. The handle is firmly attached to a revolving disk, which is the best plan in a click reel, the handle being thus free to revolve without fouling the line in casting. It multiplies from the center by a new principle, as applied to the gearing of reels, which consists of an epicycloidal wheel at the outer rim, and a large cog-wheel affixed to the axis of the spool; between these two wheels is geared a small pinion, attached to the inner surface of the revolving disk; one revolution of the latter causes the pinion of the handle to revolve three times, and the pinion of the other two wheels, and constitute the most powerful multiplying principle yet devised for reels.

The automatic drag of this reel is also a novel feature. The central pinion is countersunk at its center, to admit a coiled watch spring with a ratchet or pawl on its free extremity, which engages with shallow cogs, or cams, on the end of the handle. As the reel is revolved, the spring is coiled, it is retarded somewhat by this ratchet-wheel, the same as a click; but in reeling up the line the ratchet-wheel, or pawl and cams, are inoperative, and the line is reeled rapidly and without hindrance.

Wm. Mills & Son have also patented a new landing-net which is a very compact and convenient tool, and, I think, the most portable and useful one of the kind ever made. It is made of flexible metal brass or nickel—when released from its socket at the end of the handle, can be straightened and inserted in the hollow bamboo handle. The net can be carried in the creel or pocket.

When we add to these various implements the light and elegant rods, Sproat and O'Shaughnessy hooks, invisible leaders and neatly tinted flies which are now the pride of any first-class angler, the angler of the present day has much to be thankful for.

### BLACK BASS FISHING.

I AM fearful of being misunderstood by some reader of the *FOREST AND STREAM*, when I tell my brother sportsmen that one of the finest bass fishing localities in this State, I do not wish to be thought a hotel runner, nor agent for any railroad or omnibus line. My desire is simply to give a few directions whereby sportsmen can reach good fishing grounds easily and conveniently.

The place of which I speak is situated in the town of Mexico, in Oswego county, and is called "Mexico Point," and is one of the finest bass fishing localities between Cape Vincent and Oswego. At this place is found the natural home of the Oswego and black bass. A bar runs out for four or five miles parallel with the lake shore, and one-fourth of a mile from it. On this bar bass have been taken during the entire open season for the last three or four years. They are now taken by the minnow or small spoon, the former being the best bait, and the latter the best lure. The fishing season here opens in the latter part of July, and continues until the first of September.

Sportsmen can reach Mexico from Rome or Oswego via the R. W. & O. R. R., or from Syracuse via the S. N. R. R. I understand that a bus will be at the depot here ready to convey all passengers to the lake, distant four miles. At least a conveyance can be obtained. There are two hotels at the Point, the Lake View, kept by Mr. Will Wright, and the Point Hotel, kept by Mr. C. W. Calkins. At the Lake View will be found all modern conveniences, good boats and oarsmen. I will add that the Little Salmon River flows

s, twenty-eight of them were as fine brook trout as one would wish to have the pleasure of sitting down and dine off of. Our catch was the best that had been made from the creek that year.

The favorite trouting place of our citizens is Mt. Pleasant Pond, a sheet of water of fifteen acres, formed by damming up a spring creek. Every first of May, all our trout fishers start for the pond, and at midnight commence. There were over fifty trout caught the first day last year, weighing from one to three pounds each. This year the catch was not near so good, on account of the unusually early season. One curious thing about this pond is, that I have never yet seen a person, or heard of one, who has caught a trout from it with the fly. A great many myself among the number—have tried and failed, and have always had to fall back on club or worms. As the trout have a sort of hankering after this kind of bait, I am generally able to catch a few. One of our anglers, Mr. Minor, one day a couple of weeks ago, caught nine, averaging two pounds apiece. That was quite a good day for trout, though. The 4th of May last year, I saw one caught at this pond that weighed three pounds two ounces, and I assure you that if Sam Johnson had been watching an angler like the one was who took this fish, I would not have blamed him for his definition of angling. He had a pole, the tip of which was as thick as your thumb, a thick line, heavy sinker, and a large brass hook, and there was as much difference between him as there is between the large and small-mouthed black bass.

Can any of your readers tell me if they ever caught a small-mouthed black bass fishing in a brook a month ago, and caught two half-pounds, and there was as much difference between them as there is between the large and small-mouthed black bass.

Our river fishing has been very poor so far this year, although one or two good fish have been caught; a ten and a half-pound pike, six-pound pickerel, and a four and a half-pound black bass being among the numbers.

I intend next week to spend a couple of days at Mt. Pleasant Pond and see if I cannot manage to catch a four-pounder. Besides fishing in the pond, there are two brooks running into it, where a person can manage to catch a few trout, from the pond down to those which might be done up in bunches, marked "this bunch for five cents."

I had just got so far, when an angling friend poked his head in the door and says: "Mac, will you go to the pond this afternoon?" Mac says yes, so at 3 P. M. we were at the pond ready for our afternoon's sport. I left Charley at the pond, and started to fish the brooks, but after a while had to give up on account of the mosquitoes. Every one had his little lot to present. I came back to the pond, and as it commenced raining pretty hard, we had to quit. Result, one one-pound two ounce, and one two-pound trout. You do not catch many fish at this place, but what you catch are worth having.

LITTLE MAC.

BRADFORD, CANADA, June 19.

## THE ICHTHYOPHAGI DINE.

THE great hotel at Manhattan Beach never held a jollier party than on the evening of Tuesday last, when the famous Ichthyophagous Club sat down to their fourth annual dinner. That is, they were jolly after they had passed the danger point in the menu and found that they still lived. This danger point was the fillet of sea cow, *Manatus americanus*, a new and untried dish, which Mr. Barnett Phillips thought must be a steak of Goodbye's patent, and Mr. Francis Endicott declared would make an excellent sole for waterproof boot. Fifteen minutes after the steak was eaten, two Brooklyn cornerers who were waiting outside left for home in disgust, Mr. Blackford broke a tooth on the fresh-water mussels, which Mr. G. L. Fenward declared had been stolen from the Ces. nola collection of Cyprine matters. The following is the

### MENU.

POTAGE.

Purée of Turbot à la Oriental.

Fresh Water Mussels.

BORE d'ECUVER.

Razor Clams Farcis à la Provençale.

POISSON.

Bolled Moundfish, Sauced aux Ferevisses.

Sturgeon à la Matelotte Normande.

Chateaubriand.

Potatoes à la Maitre d'Hotel.

RELACHE.

Wolf-fish Larded à la Parisienne.

Contifournes.

ENTREE.

Albacore Steaks à la Duxelle.

Tenderloin of Beef à la Margot.

Sea Cow Steaks à la Mare d'Hotel.

Filet of Pompano à la Ravigotte.

VEGETABLES.

String Beans.

Sorbet au Kirsch.

ROTI.

Brumfish Cloude à la Chambord.

Broiled Sea Robins à la Victoria.

Salade au Salm.

FRUITS.

Horseshoe Crabs sur Socle à la Empereur.

Brumfish en Relieve à la Blackford.

DESSERT.

Glace Sapinelle.

Petits Fours Melés.

Café.

A peculiar bone from a walrus was presented to the President, Mr. John Ford, and many speeches on scientific subjects were made. Among the guests were N. A. Taylor, of Texas; Otto Witte, Hon. Stewart L. Woodford, Chas. E. Leland, Wm. Drysdale, Howard Carroll, Prof. H. J. Rice, Hon. R. B. Roosevelt, Gilliam, of Pack, who illustrated the menus, W. Hamblin, Dr. Hammond, Prof. Jewel, G. L. Ford, M. P. Hildner, Capt. J. H. Costner, C. Van Brunt, and Jules Simons. Ford attended dinner but still lives. Remedies for indigestion are quoted a shade higher on the druggists' bulletins, and the call for soda is heard in the land as we go to press.

SUNBURN.—For years, on my return from a fishing or hunting trip, the regular salutation was "Schneider, what is the matter with your nose?" and the reply invariably, "I peed and fishing mit der poys, and I purrat dot nose." Vaseline or comoline, sassafras, flurine, petrolina, unguentum, petrolol, petroleum, etc., will cure sunburn very quickly, and what is more to the point, it will effectually prevent it. Applied two or three times per day it keeps the skin soft, smooth and comfortable in a hot, dry wind or a blazing sun. If any doubt this, let them try and be convinced.—GYRFALCON.

## TROUTING NEAR CALAIS.

IF you want to take a novel trip, check your bag for Calais, Maine, and, after two days' voyage from Boston, you can sleep at the eastern boundary of the United States, or cross the St. Croix and so-journ among the English provincials, who can be easily distinguished from the Yankees. The men are slim, straight, and look as though they were corsairs, and the distinguishing feature of the women is their slowly bobbed and bushy hair. In Calais, Maine, much as the people are independent of the rest of the world, everyone feels his own responsibility and tries to make things move.

We had two friends in C., and they decided to take in brook trout. So we talked trout and slept to drift in dreams upon the Styx and catch its horrid monsters. It is well right here to tell a ruddy tale up the party. A military man, Lieutenant in the Calais Light Infantry, another familiarly called Deacon, a law student of some little local reputation, who will tell you that he and President Arthur were of the same Greek letter society in college; one called Pos, short for posterity, and your underwriter. We started at 6 A. M., and as our ride was to be a long one, we settled ourselves and sought to soothe our nerves with nervous medicine.

In view of the horses' actions I feared a premature arrival at our journey's end on the side of the road, but half a dozen miles and a good driver calmed them so that they went like two kittens.

The first twenty miles of the journey was by a traveled road through Milltown, where we saw saw-mills and a 50,000-spindle cotton-mill. Passing five miles from C. brought us to view more lumber-mills and few good farms. Turning off the highway we started across the open fields, but presently a road developed, and for five or six miles our songs and stories came by instalments on account of the jolts. At the Princeton & Penobscot R. R. track the road promised better, and at this stage of the way the rain began to gently fall. The last eighteen miles was a fine hard road, over which our horses went with good good footing. In spite of rubber coats and boots the H. O. would find the level and search the vast unknown parts of the spinal column.

When we got to the Jim Brown Brook, so called because one Mr. Brown was drowned up there, three of us dropped a line with alluring success.

This part of the road was built on a "horseback." On either side was a gully so deep, and full of rank foliage that one could not compare the road to good roads leading down through its mass of leaves. We got to Tonia Stream farm, owned by C. F. Todd, at 10:30 A. M., and met a hearty welcome. The farm buildings are in the center of a forty-acre field of English hay, such as one seldom sees down East. The horses cared for, we tried our luck on the stream.

Water, water everywhere, so we came back to the house, where Mr. Sharp had built a rousing fire in a large fireplace. The day was not so hot as we had expected, and our chilled limbs, and you can draw the curtain over four happy boys. But put it aside till you have just one story from a Calais alderman, (one phrase from which was the watchword of the crew (whose perceptive faculties, like a convex lens, focus in memory images and scenes converted by a vivid imagination into pictures bordering on the fanciful).

I had just finished my story of good fishing on trout at Grand Lake, and they came down expecting sport. Well, we fished four days and never got a rise—fly-fishing—and they blamed me and said, "Is this your boasted fishing?" Two Indians were paddling us in a big boat. I saw just ahead a ripple on the water. They didn't know what it was, but I did. I said to the Indians, "Row on, boys." We came into the ripple, and I saw a trout jumping out of the water. "Dip her, boys, dip her," and we all stood up on the gunwale of the boat and dipped her side into the water, and when she righted she was solid full of trout and only a bucket of water in her.

We four dried ourselves and then went to a down East meal of toe boiled with molasses, corned beef, butternut, biscuits, cooked potatoes, and some dried apple sauce, with too much cinnamon in it. The dozen or so farm hands took hold well, but we had to be educated to it.

After the meal we caught a fair number of trout, and one of the boys fell into a deep hole in the brook, filling his rubber boots, which came to his waist, with Nature's universal solvent. We quoted Virgil's lines, "*Foras et ab hac ostia nevinisse jurebit*," and went to sleep the sleep of the just.

Tuesday, 5:30 A. M., four men taking a fishing on trout at Grand Lake, and they came down expecting sport. Well, we fished four days and never got a rise—fly-fishing—and they blamed me and said, "Is this your boasted fishing?" Two Indians were paddling us in a big boat. **SCHUYLER LAKE.**—One of the best places for fishing in this part of the State is at Schuyler's Lake near Richfield Springs. The lake is within half a mile of the springs, but the best fishing is down about four miles on the west side. Here there are two hotels, at either of which you can get board at about one dollar per day, and boats and fishing tackle for half a dollar. The fish are black and rock bass, pickerel, occasionally a trout, and any quantity of perch. The pickerel are a peculiar kind, being shaped very much like a trout, but very few are caught that weigh less than two pounds, and from that to six pounds. I received a letter from there last week saying that the fishing was excellent, and I think that sportsmen from the city could make a pleasant and profitable trip to the lake at any time now. Thayer, who keeps the Three-mile Point House on Otsego Lake, advertises in our county papers to give fish and game dinners as usual. He is the same one you gave such a "shaking up" last summer as a member of the Fish and Game Commission that met at Albany. We have too many such men as he, erroneously called sportsmen, whose only object in wanting game laws is to keep others, who have enough principle not to kill game out of season, from killing, so as to give them the better chance.—SAX (Milford, Otsego county, N. Y.).

**FISH NOTES.**—The frequent rains have rendered the streams too muddy for angling. Besides, at this season, the leading anglers among our wealthy citizens go off on their annual trip to Wisconsin. This year Elk Rapids was the chosen point, and several letters from members to friends in Nashville report excellent sport. Capt. J. L. Bell, editor of the *Nashville Zephyr*, writes: "I believe, and what he can't catch is not worth talking about. He, accompanied by his faithful colored attendant, Humphrey, will take a turn up the mountains after brook trout some time this summer. Capt. Willie Laurie and a number of gentlemen are at present at Crisp Springs, near which are several good fishing streams, one in particular, which is richly stocked with bass and perch. The stream is so full of fallen timber and aquatic plants that the man who could come here, hence the abundance of fine fish. They will be gone several days.—J. D. H. (Nashville, Tenn., June 16).

**WHERE FISH ARE BITING.**—Philadelphia, Pa., June 23.—From the regular correspondents of the Anglers' Association of East Pennsylvania the following is reported:

*Ozford, Md.*—Pike plentiful and biting well; kinds: rock, croakers, sheephead and perch.

*Tuckerton, N. J.*—Weakfish abundant.

*Somers Point.*—Weakfish, sea bass, sheephead and bluefish.

*Cape May.*—Sheepshead and weakfish very plentiful.

*Pilot Bottom.*—Bass plentiful; river muddy.

*Port Deposit and Piles.*—Fifty.

*Betterton.*—The perch have not yet commenced to bite.

*Breakwater.*—Sheepshead, weakfish and lake abundant.

*Townsend's Inlet.*—Weakfish, sheephead and kingfish.

*Hereford Inlet.*—All the above varieties abundant.

**SKREWIPIT LAKE.**—Rockville, Conn., June 18.—I will give you a short description of our lake. Skrewipit Lake, Rockville, Conn.—fifteen miles from Hartford on the N. Y. & N. B. R. R. Elevation above sea level, 300 feet; length three miles; width, one-half mile to a mile; greatest depth, seventy feet; average depth, forty feet. Stocked by Fish Commissioners with salmon and bass. Largest land-locked salmon, six pounds two ounces; bass, four pounds nine ounces. Good boats, first-class hotels half a mile from lake. Letters addressed to Rockville News Company fully answered.—S. KNEELAND, JR.

**DO WHITEFISH TAKE BAIT?**—Fort Covington, N. Y.—They must certainly do. They are caught in the pass of the St. Lawrence called Lake St. Francis, in the Salmon, Raquette and Grass rivers. During their season in the State, they are the most unusual thing for one man to catch from fifty to seventy-five per day. They bite well at worms in deep water if you use a fine line. I know of two instances at each of their biting and being caught on a trolling spoon.—GYFALCON.

**NEW HAMPSHIRE TROUT WATERS.**—Boston, Mass.—In response to your invitation to furnish information about angling resorts, I recommend North Stratford, N. H. There is a good hotel at that point, kept, I believe, by Mr. J. V. Tibbets; and teams can be had for the trout streams in the vicinity. It is a short drive to Bog Brook, Paul's Stream, Nullegan and other first-rate trout brooks and rivers. North Stratford is reached via Grand Trunk Railway.—C. T. D.

**MARCALONGUE LEAP.**—Fort Covington, N. Y.—In their attempts to free themselves from the hooks they sometimes throw themselves out of water and shake their heads so that the spoon may be distinctly heard to rattle. Walk-eyds pike are, here at least, a good game fish, fully equal to black bass, and considered by the people in this section rather better for the table.—GYFALCON.

## Fishculture.

### "MISDIRECTED FISHCULTURE."

*Editor Forest and Stream:*

I have read with much interest the recent articles on the subject of "Misdirected Fishculture," and I notice with some surprise that in your editorial allusion to a letter printed in your paper of June 7, you say, "The matter under discussion has assumed the shape of a local dispute between Mr. Peirce and the former New Jersey Fish Commission." Permit me to say that in that point kept, I believe, by Mr. J. V. Tibbets, and teams can be had for the trout streams in the vicinity. It is a short drive to Bog Brook, Paul's Stream, Nullegan and other first-rate trout brooks and rivers. North Stratford is reached via Grand Trunk Railway.—C. T. D.

The question of whether the appropriations made by New Jersey have been wisely and intelligently expended is of course a proper subject of discussion, and anything that may be written on the subject will, doubtless, if well written, command attention, and be read with interest, but the "former" Commissioners of New Jersey do not propose to set the point with Mr. Peirce. The subject of the correspondence of former Commissioners are Dr. John H. Slack, G. A. Anderson, Esq., Dr. Benj. P. Howell, Jacob R. Shotwell, Esq., Theo. Morford, Esq., and the present writer. Dr. Slack, who was an enthusiastic and successful sportsman, was in his majority of the Fish Commission of New Jersey, is in his ninety-third year, and has been for some time in the hospital, and is now dead from a disease contracted in the actual performance of his labor as commissioner, which to him was pre-eminently a labor of love; George A. Anderson, a genial gentleman, who was also an enthusiastic sportsman, served the State only as Commissioner for five years, and he too has passed away; and a

few months ago, with loving and tearful eyes we laid to rest the courtly and gentle Dr. Howell, one of the truest specimens of nature's noblemen that ever came from the hand of the Creator.

These gentle and kindly spirits were devoted to the work in which they were engaged; they voluntarily gave to it time, study, brains and money because of their earnestness, and they will not come from the grave to rebel the imputations of Mr. Peirce and assist him in advertising himself. Mr. Shotwell, some time the colleague of these gentlemen, is a man of fine culture and high attainments, who retired from the Commission some years ago, after long and valuable service, and Mr. Morford is still in the Commission and is well and honorably known. I do not think of these retired gentlemen as gentlemen have ever seen or heard of Mr. Peirce, and I am sure I am in a position to assert that none of the "former" Commissioners have ever had any discussion or dispute with him touching the question of their own conduct. Upon another subject some of the Commissioners had some differences with him some years ago, but these were rather of a personal character, the recital of which would not interest your readers, and since then Mr. P. has seen fit to relieve his mind of sundry things and in divers places in disparagement of the Commission, but this has not in any way interfered with the progress of their work, and he has not succeeded in provoking a discussion or dispute with them. He never will find fault with them, and he will not do so, and the living will not, because life is short, and there are many ways of spending the fleeting hours more profitably and pleasantly than engaging in "disputations" with Mr. Peirce.

### FIXTURES.

#### FIELD TRIALS.

November 12, N. C.—Eastern Field Trials Club, Fifth Annual Trials, at High Point, N. C. Entries for the Derby close July 1; for the Hunters' Stake, Nov. 15; for the All-Sex Stake, Nov. 1. W. A. Oster, Secretary, Flatfish, Long Island, N. Y.

November 29, 1893.—Robin's Island Club's second Annual Field Trials at Robin's Island, L. I. for members only. Entries close Sept. 1. A. T. Hummer, Secretary.

December, 1893.—National American Kennel Club, Fifth Annual Trials, at Grand Junction, Tenn. B. Tryon, Secretary, Memphis, Tenn.

### DO DOGS REASON?

HERE is another instance of a dog understanding ordinary conversation. Some five years ago I owned a dog, of cross breed—shepherd and spaniel. He was black, with long hair, or coat, about the usual size of a shepherd dog, and very intelligent. My daughter had two particular playmates about that time, who lived too far away in another part of the city to visit each other, except on Saturdays, non-school days. I had a swing in the yard which they patronized on these occasions. One Saturday these two came to have their play together. It so happened that the oldest sister of the two wore a pair of cuffs buttoned with gold buttons; the cuffs would become soiled in their swinging, so she took them off and laid them down on the ground, the buttons detached from the cuffs alongside of one of the supports to the swing, the dog, Watch, being always with them on these occasions. When it was time to return home, the elder sister took her cuffs, but not the buttons, not missing them at the time, for the reason, as we (wife, daughter and I) supposed afterward, that the dog had taken them. The oldest sister of the two was busy at play, and gave to some place in the yard and buried them. So when the girls got home, the elder missed her buttons, but remembering where she left them, she told her mother, and the mother, in turn, told some one of our family who would see and take care of them, and on the next Saturday she would make another visit and then get them. They came, and inquired if any of us had found them; we all answered no. Then the girls went out to the swing—the dog was usual being with them, looking and wondering what had become of the lost buttons, and if any one had come into the yard, found and carried them away. Pretty soon Watch came and laid them both down in front of the girls, seeming to be overjoyed at their return. He had, I thought, no more of it at that time. A few days after that she baked some biscuits again, Watch came begging again, and she said to him, "I gave you one the other day, and you went off and buried it. I think. Have you eaten that up yet?" Watch goes out, and pretty soon comes back with it in his mouth, and he lays it down at her feet. It was as fresh as if just baked. Now in these two instances, so dissimilar in circumstances, and at different periods of time, if they do not clearly prove that this understanding appears with it in his mind, he is a dog, and the distinct interrogatory put to him, then I give up, and ask what is it? I say that dog understood the subjects mentioned.

SAN FRANCISCO, June 3, 1893.

### CHAMPIONS.

*Editor Forest and Stream:*

It appears to be rather a dangerous undertaking to write on the dog question now-a-days, for you to some extent press an opinion than a dozen gentlemen rush into print to prove you wrong about it. Therefore I shall put my humble opinion in the guise of a query and wait to be instructed with due meekness. Though only an humble American I hope I know some little of the English language, and the knowledge of dogs, even Col. Taylor and Judge Mason will hardly maintain is confined entirely to the tight little island. Consequently I would like to ask if the title of Champion, as applied to dogs, is an English word, and if so, what it means, and if it is, in shooting, rowing, tennis, billiards, and the like, to lay any claim to the title of champion one must hold it against all comers and maintain his supremacy at least through three contests. But a dog is entered in the champion class wins often with no question, and immediately he is trumpeted forth as a champion, and if there is any danger of his getting beat at the next show, is frequently not shown. Is this right? Ought not every champion be required to hold on to his laurels, and if he is to be considered a champion, to keep the title only by force of merit, and if after winning once, he is beaten at the next show, ought he not to forego the title until he wins again? This seems the only way in which the honor of the name of champion, and the value of the prize, would be maintained. In any case, and I will prevent the cheapening of an honor which is frequently won by what, in racing parlance, is termed a walk-over. Let us hear the views of some of your many correspondents on this question.

T. B. DORSEY.

**GLENFILLAS.**—In the list of awards of the Chicago show published last week, by mistake Forest Lill was announced as the winner of the English setter bitch class. The prize was awarded to Mr. T. G. Davoy's Glenliss, black, white and tan, four years old, by Rob Roy out of Doll.

**AMERICAN KENNEL REGISTER.**—Entries for the next number will close July 1.

### BEAGLES.

IN regard to a standard for beagles and the formation of a beagle club, there are many points to be taken into consideration. I have my doubts as to the success of forming an organization to perfect a standard. We have the brilliant example of the cocker men in their bickering and controversies over weights and dimensions as a warning. The great trouble is that most breeders and owners think like the infallible Col. Stuart Taylor, that their own stock is best and the only place any such dogs as theirs can be found is across the water. I have my doubts as to whether I have my ideal, but have not yet seen one which completely fills my ideal, although I have had good ones and watched them by the hour, and examined very carefully better ones owned by others. One defect with many of the prize winners is too much weight of back as well as sharpness of nose. The head should count very high in judging by points, and ought to be round, have a good dome but not sharp on top, long round ears set low, eyes full, short from the line of eyes to end of nose, which should turn up just a trifle and be square at the end. Anything over fifteen inches high seems over-sized, but I do not deem it necessary that a dog should be as diminutive as some breeders maintain, for we keep the little hounds to hunt, and the very small ones labor at a disadvantage in many covers. Tongue is an important item in a beagle, there being such a thing as too much as well as not enough, and then there is tone to be considered. I know our friend Rogers will agree to that. I have no patience with a horse with a cold, and a cold beagle is one that never gives tongue. How are we going to decide about a beagle's field qualities when he is exhibited on the bench? Give me field trial winners for all bench winners every time in all breeds of dogs.

However, I do not wish to throw cold water on our Pennsylvania friend's scheme to form a club and am willing to join if by so doing I can do anything for the advancement of the little dog I admire so much. In my humble opinion the standard should be left to the wisdom and common sense of the standers. Dr. Twaddell, of Philadelphia, Gen. Rowett, of Quincy, Ill. the official breeder of beagles in this country, and N. Elmore, of Granby, Conn. The last named gentleman has the most extensive kennel of beagles in the country, but I would trust him to judge no dogs in comparison with any other day, and I think his ideas on a standard would be valuable if he should give the time to it. Regulating matters in town meeting style is unsatisfactory, but I feel all hands write as much as possible on the subject, and I think it is better that we should have the ideal beagle points made up by a few competent members.

DOCKIN.

*Editor Forest and Stream:*

I am glad to notice a growing interest for the improvement of the beagle. I am particularly interested in this little hound, and fully indorse the suggestions of "Razor" that a beagle club be organized and a "beagle standard" arrived at. I should think that we would know the value of a beagle, and that three of these little hounds, and they are as nearly equal each other as three distinct breeds would be, and they are all little breed dogs. One is by Elmore's Ringwood and one by his last Lowell bench show. I purchased her because she was a prize winner and because she looked so different from the other two. I have my ideal type, and others interested in this breed have a fancy for a different type. How then can you fix a dog to breeders, and how will judges know what kind of a dog to look for, unless a "beagle standard" is adopted?

Many thanks are due to "O. W. R.," "Briar," "Razor" and others for their efforts in this direction, and I hope they will agitate this subject until the desired "beagle standard" is established.

A. D. BARBER.

TOWNSEND, Mass., June 16.

### THE ENGLISH BEAGLE STANDARD.

*Editor Forest and Stream:*

In reply to "Briar's" query, "Why there are not more beagles entered in shows, why some have kept their stock at home and only let their friends see them?" allow me, as my name was mentioned, to say that my stock has been entered at numerous shows and literally won dozens of prizes, and my dogs are not entering at most of the recent shows but have been understood by giving in brief my experience at the last two shows. I exhibited at Lowell, entering eight beagles and taking all of the prizes, and my dogs also took distemper and two of the best of them died. I have adopted after years of experience and have caught the disease from those entered at the show and died.

My next venture was at Meriden last January. I entered thirteen dogs and won thirteen prizes, and in addition nine of the dogs won the honor of D.D. (Distinguished Dog) and I won them, and nearly all of my young stock caught the distemper from dogs that died, and twenty-eight of those died, making thirty-seven dogs lost by exhibiting at Meriden, and at a low estimate about twenty-five dogs more lost by exhibiting at the same show. I was from four to six months old and selected as being extra fine. After such an experience I do not think "Briar" will wonder that I abandoned my intention of making a very liberal entry at almost every show—my intention was to enter my dogs at home for reasons given, for I certainly could not find fault with judging after such success, which I mention simply to show that I have no fault to find with judging.

Notwithstanding my experience, I shall exhibit some at future shows, and particularly at the one at Meriden, and regret not being able to enter at Pittsburgh and New York.

TRUTH.

I am strongly in favor of having some recognized standard for beagle judging that shall be a guide to judges at bench shows and prevent prizes from being awarded to such entirely different types as we frequently see done at the same show. I have often thought what a motley looking pack all the prize winners would make if they were collected together, all sizes and forms, with no breed characteristics to many of them. I will give the standard I have adopted after years of inquiry as to what constitute correct beagle points and will say, after attending numerous shows and seeing the same judge at shows award prizes to two different types of beagles, overlooking the standard I have adopted, that I have seen the first one was entitled to it. I came to the conclusion that judges had no standard and it was useless to place any confidence in their decisions or form a standard (unless a changeable one) from types that were not standard. I have adopted the standard I have adopted at Philadelphia, who is acknowledged to be one of the best beagle judges in this country, that I had become disgusted with such judging and had made up my mind to form a standard of my own according to the best I had seen. I have adopted the standard I have adopted at Philadelphia, who is acknowledged to be one of the best beagle judges in this country, that I had become disgusted with such judging and had made up my mind to form a standard of my own according to the best I had seen. I have adopted the standard I have adopted at Philadelphia, who is acknowledged to be one of the best beagle judges in this country, that I had become disgusted with such judging and had made up my mind to form a standard of my own according to the best I had seen. I have adopted the standard I have adopted at Philadelphia, who is acknowledged to be one of the best beagle judges in this country, that I had become disgusted with such judging and had made up my mind to form a standard of my own according to the best I had seen.

Having said this, I have adopted the standard I have adopted at Philadelphia, who is acknowledged to be one of the best beagle judges in this country, that I had become disgusted with such judging and had made up my mind to form a standard of my own according to the best I had seen.

STANDARD.

Head intelligent, rounder, shorter and wider than fox-hounds, with high, round dome; eyes large and full, with a soft, intelligent, pleasing expression; ears long and full, with a round, set low and hung flat to cheek; this should be round, set low and hung flat to cheek; this should be round,

MR. BAYARD THAYER'S LEMON AND WHITE POINTER BITCH "RUE."  
Winner of Champion Prize, New York, 1883.

Muzzle square-cut and lips slightly dependent. Neck strong and set on higher than foxhounds. Breast wide and shoulders strong. Body round and rather short, with wide, strong loin; thighs thick and muscular; legs strong, with plenty of bone; stern shorter than foxhounds, and carried slightly curved above line of back. Coat should not be fine or very short. Any color allowed foxhounds or harriers is admissible. Height from twelve to fifteen inches, and from fifteen to twenty pounds weight preferred.

SCALE OF POINTS.	
Head.....	20
Neck.....	5
Legs.....	10
Feet.....	10
Shoulders.....	15
Back.....	10
Loin.....	10
Hind-quarters.....	15
Stern.....	5
Total.....	100

Speed is not desirable in beagles, and a strong, compact form adapted for endurance is, in my judgment, what is required.

I was much interested in an article by Gen. F. A. Bond regarding a certain pack of beagles running down thirteen rabbits one day, and fully agree with the General that beagles of correct type cannot, under ordinary conditions, run down rabbits; at least I never had any that could, and having the largest beagle kennel in the world, have been able to put as many into the field as any one, and my pack have never yet caught an unrounded rabbit. Holes and stone walls are too common in this section for puss to allow herself to be run down before retreating to them; and the great sport in hunting with beagles is that they run so slow that game is not compelled to take to earth and gives the hunter an opportunity to obtain a shot.

GRANBY, CONN.

N. ELMORE.

#### DOGS AT THE NEW YORK SHOW.

Editor Forest and Stream:

Perhaps Col. Stuart Taylor will explain why he does not quote from Mr. Dalziel's letter entitled "Babylon?" If there is anything in it incriminating his statement to Mr. Cornell (and I may add that he made a similar remark to me) I fall to see it. His letter is a pleasant, chatty one, with very little in it about dogs, and not one word derogatory of the quality of those exhibited here. He makes but one reference to our shows, which is as follows: "The Westminster Kennel Club are also the promoters and responsible for the great international dog shows held in New York, which, speaking of the one held this year, was superior in some of its features to any I have judged at or seen in Europe."

Perhaps your readers can find in this brief extract good reason for the eminent critic's failure to quote. Col. Taylor attitudinizes as the generous, public-spirited lover of the dog, who only seeks by his criticisms to spur his fellow countrymen into more successful rivalry with foreign breeders. The spirit is a worthy one, but I protest against his method. Wholesale denunciation will not attain that end, and is not deserved. It is such statements as the following which I object to. I quote from Col. Taylor's letter in your issue of this date: "Now, seriously speaking, Mr. Editor, a poorer lot of dogs of the many breeds exhibited it seems to me it were hard to get together, unless we took nondescripts." Whatever of justice there may be in his objections when he particularizes is neutralized by such sweeping charges.

New York.

Editor Forest and Stream:

Your valued issue of June 21, is at hand, and I have just read the highly practical and sensible letter of Col. Stuart Taylor. Your correspondent treats his subject so ably that he leaves very little for any one else to say, except to endorse all the views set forth by him. One subject alone is capable of being enlarged upon. Col. Taylor says: "Let our breeders and our judges stand by, hard and fast, a type of dog pronounced good, and award laurels accordingly; there is too

much change from bench show to bench show in the prize winners, even under the same judge."

He has hit the right nail on the head. Is it not a patent fact that the same dog exhibited under different judges very rarely is allowed by both to score the same honors? Where do our judges get their ideas of type from? And further, where are breeders to get their ideas of type from? Each week we see controversies over certain dogs, some praising, some condemning them. Cannot something be done to remedy this kind of breeding from two types? Witness the trouble over the breed of cocker spaniels. The fox-terrier, Silver, was under one judge at Ottawa awarded second prize, and was no doubt considered a pretty good specimen. Now at Chicago he is passed over with a ych, and the remarks made on him are: "Is only a fair specimen, is leggy and light in bone and coat." It should have been added that he was broad-chested and had a snipy muzzle. Now, sir, where is the one definite type in this one of many instances? Cannot our judges unite in judging each breed of dogs from a definite, accepted standard and type of each breed? Or better still, cannot we have at each show a judge for setters and pointers, a judge for spaniels, and one for terriers, and so on? Let us hear from others on this subject, for my feel as I do.

Editor Forest and Stream:

I think Messrs. Cornell, Coster and Pickett's letters in answer to Col. Stuart Taylor's criticisms of our late show were uncalled for. They ought to be very grateful that at last one gentleman has been discovered who has such a thorough knowledge of dogs. A judge who himself tells us that he knows as much about pugs, mastiffs, etc., as of setters, pointers, and all other dogs, is indeed a rarity, and I sincerely hope that the Westminster Kennel Club will let Col. Taylor judge, in future, all the dogs at the show, and do away with having so many judges.

New York.

#### SOME STAUNCH POINTS.

TALKING about dogs, I wish to say a few words about the staunchest, and in most other respects the best, dog I ever knew. His name is Joseph E. Johnston. He is a large white setter, with liver ears, and some liver spots on his body. Old Joe is now superannuated, quite deaf and infirm, but still cherished and cared for by his master and mistress for the good he has done. He is, moreover, the progenitor of many good dogs in this region, the best, indeed, we have about here. In 1865 Captain Chamberlayne rode on horseback from Virginia to Mississippi, just after the surrender at Appomattox. While passing through North Carolina some one gave him a large setter, which journeyed with him all the way to Mississippi. He called the dog Tramp, in commemoration of this event, before the term had acquired its present unpleasant notoriety. Tramp was a magnificent dog, with a splendid "flag," carried erect and waving as he trotted, and galloped at a hundred a mile. He called the dog Tramp, in commemoration of this event, before the term had acquired its present unpleasant notoriety. Tramp was a magnificent dog, with a splendid "flag," carried erect and waving as he trotted, and galloped at a hundred a mile. He called the dog Tramp, in commemoration of this event, before the term had acquired its present unpleasant notoriety. Tramp was a magnificent dog, with a splendid "flag," carried erect and waving as he trotted, and galloped at a hundred a mile.

Joe Johnston is the son and exact image of Tramp. All the pedigree known of Tramp is that embodied in the pedigree of the Right Rev. Bishop A., who, while he is a sound churchman and an able and worthy divine, does not consider the healthful exercise of bird shooting beneath the dignity of the cloth.

Bishop A., who, while he is a sound churchman and an able and worthy divine, does not consider the healthful exercise of bird shooting beneath the dignity of the cloth.

In the other instance, Joe was going at a gallop, and jumped through a barbed wire fence. When he struck the ground on

the other side he came to a stand on a covey, a few feet off. Skipwith came up and flushed the birds, but noticed that Joe was standing over a pool of blood, perhaps a pint. On examination he found a gash four inches long, and quite deep, in Joe's abdomen, made by the barbed wire. Yet he stood perfectly staunch, without a whimper. He was carried home and the wound sewed up, and it was several weeks before he recovered.

Your "tinks" man can beat me on flights of fancy, but what I have related about Joe are facts. OVAUCHITA.

Monroe, Louisiana.

[Almost everyone who has been much in the field with good dogs can recall interesting exhibitions of this kind; and as the subject is a most entertaining one, we hope that some of these points may be described in the FOREST AND STREAM.]

#### RUE.

THE pointer bitch Rue, whose likeness we give this week, is undoubtedly the best specimen of the small pointer that has been produced in this country, if not in the world. She was bred by Mr. Edmund Orgill of Brooklyn, N. Y. She was whelped August 12, 1879. Her sire, Snapshot, was imported in 1877, and to his long list of winnings in England, he added a number of important and well won victories here. Her dam, Ruby, was litter sister to Mr. Orgill's well-known Rush. The breeding of Rue, it will be seen, is of the best and she is fairly entitled to her good looks. We are informed by those who have seen her at work that she is an excellent fielder, with a capital nose, very speedy and has lots of style. She was purchased by her present owner, Mr. Bayard Thayer of Boston, Mass., at the recent New York show, at the largest price—one thousand dollars—ever paid for a pointer bred in this country. We understand that it is the intention of her owner to run her at the field trials next fall. Rue was first shown in New York in 1880 when she was given ych in the puppy class, and first at Atlanta, Ga. At the New York show this year, she won in the champion class and with Rush, Random, Rowell and Romp II., in the best kennel of small-pointers. She also won, the same year, first at London, Ont., and first at Atlanta, Ga. At the New York show this year, she won in the champion class and with Rush, Random, Rowell and Romp II., in the best kennel of small-pointers. She also won the prize for the best pointer at the same show. The cut is from a sketch by Harry Tallman.

BOXER IS POISONED.—I can now sympathize with others who have been compelled to deal with that miserable form of a sneak thief who has not the courage to say a word in open light, but vents his cowardly meanness on a dumb animal. Just one week after his return from the Pittsburgh show, my beagle dog Boxer II. was poisoned. A short time before, the same fact befell my pointer dog Dick. I considered Boxer a good specimen of the English beagle and had shown him but twice—last June at Cleveland, where he took first, and this year in Pittsburgh, where he took second; one of his pups, Lill II., taking first at same time. Besides being a prize winner, he was an untiring hunter. Some of his pups at five months old would give tongue on trail, which in my opinion was something extraordinary, and think it sticks about the right kind of material. I have strong suspicions as to the identity of the sneak, and hope to gain a little more proof when I will try to make it hot for him.—J. M. BRIGGOLD, Canal Fulton, Ohio, June 12.

ERIN AND BIDDY'S PEDIGREE.—Editor Forest and Stream: For the benefit of the parties making inquiries of Biddy (80 N. A. K. C. S. B.) and Erin (5, 120 E. K. C. S. B.) I send you a full pedigree of the first and one of Erin's son, Erin II., which I hope will help to furnish the desired information. I think by closer comparison of the English and American stud books you will see the pedigree of old Erin is the same in both. Champion Biddy's pedigree you made out as by Erin out of Fan. It should be by Erin (5, 120 E. K. C. S. B.) and out of Whitford's Erin, imported (80 N. A. K. C. S. B.) (later St. Louis Kennel Club's). Biddy and Erin II. were bred by the C. S. B. Kennel Club and they were sold by that club to Mr. J. B. C. Lucas, of this city, who still owns them and takes them on his annual shooting trips to Minnesota. They were thoroughly broken by C. B. Whitford. I don't think "J. W. G." will find out anything more of the pedigree of Duke of Buccleuch's

her taken stock in the talent about him, which urged twenty consid-  
 erable sufficient in place of the thirty-two now struck below in de-  
 fence to the dictates of the "great American twister." There was  
 something wrong with Clytie. That schooner is a well-shaped lady  
 with no end to her muslin. She certainly has the go in her to take the  
 arch out of Crusader, and yet she can do nothing of the sort. Some

WENONAH, CUTTER, WINNING N. Y. Y. C. MATCH, JUNE 21.

## NEW YORK Y. C.—JUNE 21.

It was a "luck race," and it was not. It was luck to a great extent to get out to the Lightship and half way in to the Jersey beach, where the majority of the yachts bunched and took a fresh departure to get to the last quarter stretch home. It was no race at all, inasmuch as it was soldiers' business all round without as much as a "turn," excepting one short board to the westward for a higher position coming out along the West Bank made by Mischief, and a little later by Vixen. Not that this was really required for lack of close windiness, but the slackening of the breeze and a little more easiness to some of the streaks had sagged these two sloops as well as many others making up the rear somewhat to leeward of the leaders, who had run out with about all they wanted for a time. This was of course a great disappointment. A close haul to the Spit with an unsteady S. S. W. wind, a drift out past the Hook with spinners hanging limp, a lot of unequally dispensed outpaves and airs waiting them out to the Spit, a tolerable turn, a jam on the wind for a long and short for working back to the Hook, a calm about half way in, and a fresh and smart breeze from S. S. E., finally striking in all and along the line, making it free sheet clear to the finish, all this was not likely to produce a hand to hand tussle with rewards bestowed according to merit. In fact but for the bunching near the Jersey beach and the magnificent turn home, the race would hardly be worth recording, except as a tedious and unsatisfactory fluke and drift. Three-quarters of the match is a story of fluke with occasional interesting brushes, but the last quarter made amends for previous shortcomings, and the race in to the line with the magnificent spectacle at the finish will not quickly be forgotten.

The fleet was probably the finest, and it certainly was the fastest, ever collected in the history of American yachting. Had there been a fair share of windward work it would likewise have been the most absorbing encounter fought in our waters. But the club did all it could, old Prob, failed them, and so we must accept the open field for some speculation which this match was intended to aid in closing. The day was of more than national importance. Such a weighty fraction have deep yachts already become in our leading clubs that races assume an international coloring when sloop and cutter meet. This phase is likely to pass before long, when really American cutters shall have filled the places of the present vessels designed on foreign lines, canvassed and sailed by foreigners because of our lack of familiarity with such craft on this side of the Atlantic. We live and learn, and the numerous victories scored by cutters, to which another brilliant achievement has just been added, must have their influence in begetting home-built yachts of this description. Last Thursday hardly afforded a criterion of the performance of the yachts, for with windward work there might have been revelations of more radical significance. This much may be said. After lucking it out to the turn, the early birds found they could lay no lighter than W. S. W., heading in to the beach. The true course in was nearly V. N. W. The rear guard rounding the Lightship in straggling order was on the point of following suit when the wind petered and a dark squall to the southward brought a newly born breeze from that quarter, taking the leaders aback and causing them to square away quickly for a free run up along the shore, edging in all the time to the Sandy Hook buoy for a neat turn. They had, however, made so much southing while high on the old wind, that the yachts rounding the Lightship last found themselves suddenly jumped to the line by no doings of their own.

The two batches were all at once put about equally distant from Sandy Hook, and a general rush for that cape was undertaken, nearly all hands meeting in a cluster some distance below and making a grand company hunt along the beach, affording really a second start for the day and the beginning of the race in earnest. As the lot ran up South ballouers and spinners tilted to tension and in rapid succession hailed around the black can, a choice bit of live racing was witnessed, glorious enough to make one forget the tedious annoyances earlier in the morning, and what seemed to promise only a wretched failure was rounded off to a close as brilliant and imposing as was full of instruction. If any satisfaction can be derived from summing up a dash in a crowd, our observations may be given to the following effect: Among the schooners, Montauk seemed able to fully hold her own with Crusader and others, but got left by the wind coming up the beach outside, while others holding a vantage drove down on her, blanketing her, and holding their way, shot by

before Montauk could pull herself together for the new state of affairs. She never recovered what she lost. Crusader was admirably tooled, and in her excellent form this year will keep Montauk moving when the latter's tonnage does not stand her in stead; besides, Crusader has a grand fitting suit and a perfectly gorgeous array of kites. Grayling, the new candidate, made a fearfully bad start, which, considering the professional talent aboard, was quite unaccountable. Her skipper huddled a deal better than he knew, for this late start put her well to the fore in the end. She had modestly been closing up the rear clear out to the Lightship, and being one of the last to turn had gone least to the southward when the new breeze struck in from that direction. She found herself in luck, having less distance to travel home than the rest, which she put to best account by turning up in the middle of the flock coming up the beach. Once she had the true wind with the rest, she failed to accomplish anything worth notice, being in fact easily held by Crusader. But, if Grayling gave no evidence of more than ordinary speed, we are inclined to consider her best lay down wind, and of this game she had to her ill nearly all day. So far as her early appearance at the finish is concerned it was a stroke of luck, pure and simple, due to her being at the tail of the fleet while rounding the Lightship, and at the tail she would have remained but for the sudden shift in the wind. Fortune was brand new and stiff, and being one of the last ones off, struck into the doldrums outside the Narrows, and fared poorly for wind all day, missing what there was by a few lengths upon several occasions. She likewise had a crowd to keep at bay when casing around the Spit and was blanketed and covered without mercy, and snapping her spinnaker boom in jibing a short ways out of the Hook. This schooner received, however, a good deal of admiration for her fine appearance, and the spectators seemed to be aware that it was too light for her kind. It was luck principally that seemed to be dead against her all over the course. Intercepted at times moved off with great ease, and was a good fourth in her class at the Spit, after which she lay becalmed and failed to catch the airs snuffing others along in the hunt, and as a down wind vessel she will not be dangerous. Her reputation in the past, upon which so much store is laid in some quarters, is more of a myth than anything else, and the chances are she has been greatly overrated right along. She never had anything of her size to sail with in history, and then we know from improvements in rig, etc., found possible within the last two or three years, that the yachts she met were probably fearfully deficient in respect to equipment. Fanny, on the other hand, was something of an eye opener. All knew Grace as a steamboat with spinnaker out, but when they saw Fanny get away rather badly with the old favorite, there was something to talk about. Fanny, bar cutters, looks to be the fleetest down wind we can muster. She is likewise smart on a wind sail just low smart remains to be seen. Mischief had a big share of the bad luck running, but pulled through a good fourth at the Lightship. Then trimming in for the short-lived windward work, she seemed to sag to leeward and fail to point with the rest. The question is, who had the helm at the time, for the boat could certainly do better. Hildegarde and White away fell victims to the great American trisler, and are now repairing damages. As for the cutters, Bedouin and Wenonah, they sailed a race through all the vicissitudes of Bickie fortune, and came out nobly at the finish. Bedouin made a good start, held Grace down by the West Bank, hit the wind full and the latter got the fluke already spoken of above. Then Bedouin drifted into the calm belt outside, while Grace, wisely edging to the seaward, found a fair breeze, wait her out to the sea mark, and Bedouin felt among the ruck coming up, but after

some very fair sailing crossed fourth. What she may do on the wind remains to be seen, but we are convinced that with a racing rig Bedouin would be by odds the fastest single stickler with a free sheet in America. Considering that she has left less hoist than her racing sail plan calls for, her record last Thursday deserves commendation. A stiff breeze and a windward bout will be her play. Wenonah performed wonders, and strong words of admiration from even the most hardheaded believer. In old time dogmas. In contemplating her doings, we skip the first portion of the race as too thick, and pick up her record from the Lightship in. She gave close chase to Fantia on the wind for a while, being eighth boat in the line. As the new breeze backed them all aound to a free sheet with booms to starboard, she was to leeward of the whole lot. Now the business of the day really began. It was a grand sight. Wenonah picked up one by one, schooners and sloops, shot through their lee in astonishing fashion, and as all hands closed in a bunch, the wind being off, she took blanketing and covering with a *nonchalance* which was the coolest bit of work of the sort we have ever seen. But in spite of all this she ran the crowd, and nearing the Hook, emerged with a lead of the whole fleet, Fanny, Grace and Crusader excepted. A finer down hill drive has seldom been seen. Then she went about cutting down the water left between herself and the two big sloops. As she spun up to the finish, going through clean without a bubble, a vast deal of tooting from the steamboats assembled announced the victory over America's fastest flyers by nothing more than a crossing cutter! A cutter her designer is ready to acknowledge five to ten minutes slower over a forty-mile course than a clipper of genuine racing proportions.

The smaller yachts were much bothered through the earlier part of the race by blanketing from the big schooners. As they could not clear out from under their lee in the light winds, they were mercilessly nipped at times. Vixen, in her new form, did not quite seem the old boat, but she scored, nevertheless, in her class, beating Fantia, which is something to brag of after such misfortune. Oriva sailed a thoroughly good race, but lost the wind and made the outer mark in company with the last, leading her class home, however. The difference in actual speed between her and Vixen was less than three minutes, or ten minutes with allowances applied. For all yachting purposes, except racing, this difference must be considered purely nominal, of no practical consequence. Now, no one looking for safety, accommodations, beauty, cool canvas, handiness, sea-going ability, and such sterling qualities, but who would select Oriva and pass by Vixen. If Oriva loses to the latter by only a few minutes in six hours' racing, the exchange she offers in other respects so much more than counterbalances, that our choice is with Oriva every time as the more desirable style of the two.

The race again demonstrated how badly we are off for a good course in New York. One sailed from time immemorial round the Spit and Lightship too much of a triangle, and in the southerly wind of June supplies too little turning, which is, after all, the chief attraction and the best test of good qualities. For this match the directions were as follows: From an imaginary line between the two steamers and Longwood Stapleton, to and around buoys 10 and the Sigs spindle on Southwest Spit, leaving black buoys on starboard haul, thence out to the Sandy Hook Lightship, passing outside of the black can buoy, 5 off Sandy Hook, the Lightship to be turned from the northward and westward, then returning over same course and finishing at line between judges' boat and buoy No. 15, below the Narrows. Classes for schooners, sloops, and cutters over 50ft. and under 50ft., and for sloops and cutters over 50ft. and under 45 to 50ft., according to new headline and sail area measurement. For the guests of the club the large steamer Columbia had been chartered, Mr. John H. Bird, of the regatta committee, being in command, while Mr. J. F. Fowler accompanied the racers aboard the tug, Luckenbach. A vast fleet of "outside" yachts got under way and kept along under the lee of the contestants, or undertook to work their way through Gedney's channel in a short keel, while a dozen steam yachts and half as many tugs and steamboats on speculation bent screws and paddled out to sea, offering several thousand persons an excellent view of the great annual regatta. Among the steam yachts should be noted the Orienta, a smart looking Herreshoff production with two coal boilers, and the No. 10, that being the yard number of the latest quick speed turned out by the Bristol firm. Both of these were very fast, the No. 10 toying with the Stranger and Corsair, and speeding

## AMERICAN

# Kennel Register.

A monthly record of kennel events for the information and guidance of breeders, exhibitors and owners of all breeds of dogs.

Its leading feature is the "Pedigree Register," of sporting and non-sporting dogs, which makes it the only complete Stud Book issued in America. A register number is given to each dog, and an index will be compiled at the close of each annual volume, thus forming a permanent work of reference. The pedigree registration fee is twenty-five cents. The first two numbers of the Register contained the pedigrees of 138 dogs.

Departments are also provided for the registration of stud visits, dogs at stud, births, sales and transfers, dogs at sale, and deaths.

Prize lists of all the American shows will be given, with descriptions of the principal winners and dogs exhibited; also prize lists of important shows abroad. This department will include a record of field trials. The first two numbers of the Register contain prize lists of Washington, Ottawa and Pittsburgh shows.

The publication day is the fifth day of each month; and nothing can be received for publication later than the first day of the month. All matters intended for publication should be in the hands of the editor at the earliest practicable date. Entry blanks for each department will be furnished free on receipt of stamped addressed envelope.

TERMS.—Issued by yearly subscription only. The subscription price is one dollar per year. Make drafts and money orders payable to the Forest and Stream Publishing Company. Address, AMERICAN KENNEL REGISTER, P. O. Box 2,532, New York City.

## THE ABSURDITY OF THE FOURTH.

JUST about this season, over a good section of the country, hundreds of thousands of very patriotic and very foolish persons are inviting death by the firearm method. Somewhere at some time some one reached the absurd conclusion that the correct way of celebrating the holiday of our National Independence was to raise as much noise as possible. Unluckily his view has been adopted by the millions of his fellow-citizens, and now year after year there is a repetition of the catalogue of deaths and mangleings.

There is something so utterly ridiculous in using a firearm entirely for the noise which accompanies its going off, that it is surprising no concerted effort has been made by the arm manufacturing companies to discourage this application of their wares. In place of doing this, however, and for the sake of the profit which follows the sale of the pesky little things, we see several large concerns giving up their time and labor in large measure to turning out thousands upon thousands of contrivances which have the name and appearance of firearms, but which in the essential points of accuracy and safety are utterly unworthy of the name.

There is a clear, sharp defining line between a pistol proper, one which has a value as an arm of precision, and these cheap little counterfeits. And there is ample room for the operation of a salutary law which should come in to repress the making and vending of the dangerous toys.

There are plenty of noise-provoking contrivances which may be manufactured to meet the wishes of those who insist upon expressing their feelings by means of a racket, but there is no reason why so excellent a thing as a firearm should be debased into such flimsy pretences as we see hawked at every street corner. It would indeed be an important item in our strength as a commonwealth if every American citizen were familiar with firearms, had a just appreciation of their powers and their dangers, but there is a right and wrong way of securing that excellent result, and one of the worst ways is to put a make-shift of a weapon into the hands of every boy who can beg, borrow or steal the time or two necessary to secure the toy.

## BENCH SHOWS.

THE bench shows that have been held this year have been uniformly successful both in the number and quality of the animals exhibited, and also from a pecuniary standpoint. This shows a healthy state of affairs, and should encourage all who have an interest in the welfare and improvement of man's best friend to renewed efforts in speeding on the good work until every lover of the dog throughout the length and breadth of the land shall become possessed of the knowledge that will enable him to intelligently pass upon the merits and demerits of his favorite breed.

That the bench show has been a great educator of the public in this respect, no one who has been a regular attendant can deny. That still greater good will be accomplished in the future we have every reason to believe. Although the bench show is comparatively of recent introduction in this country, it has already become a permanent institution, and we trust that the day is not far distant that will see not only our larger shows greatly increased in number, but that in every city, village and hamlet in the land, we shall see local shows where friend and neighbor will meet in friendly rivalry, to decide upon the respective merits of their favorites.

This plan is extensively practiced in England, and contributes in no small degree to the success of the larger shows, both in the increased number of entries, and in the improved quality of the animals exhibited. The owner of the village champion, ambitious for higher honors, "seeks other worlds to conquer," and sends his favorite to a larger meeting, and so continues until he encounters defeat or achieves a well won victory that brings to him not only fame and honor, but pounds, shillings and pence as well. That this plan is eminently practicable and feasible it needs no argument to prove, nor of necessity need it entail a dollar of expense upon its promoters, at least so far as the smaller shows are concerned, as the honor of owning the "best of his kind" in the vicinity should be ample recompense for the small amount of trouble entailed. We trust that our readers will give this subject the careful consideration its importance demands, and that we shall soon be called upon to chronicle the inauguration of a series of local shows all over the country, that in a short time will accomplish the much-to-be-desired result, the filling of the benches at our important shows with representatives of the best of their breed from all sections of the country.

THE TOY PISTOL is doomed; State laws and city ordinances have been enacted for the suppression of the pestiferous agent of death, and parents and police are united to squelch the nuisance. This is all as it should be; the sooner the sham pistol is banished the better for the thumbs and eyes of the patriotic small boy. But it is very foolish for parents to indulge, as they often do, in an insane horror of all firearms. A boy ought to be taught to handle a shotgun or a rifle just as soon as he is old enough and strong enough to do so. He will be all the more ready for it. Gunpowder smoke is healthier than cigarette smoke, and the associations and influences of the one are better than those of the other.

THE SUNFISH.—In a paper read before the Fishcultural Association and printed elsewhere, Mr. Fred Mather recommends the destruction of the sunfish. From any such proposition the FOREST AND STREAM most emphatically dissents. The sunfish was our earliest friend among the fishes; we hooked him long before our vaulting ambition dreamed of trout or bass, and when salmon was a term unknown to our vocabulary. The fishculturists may wage their campaign against the sunfish, but they will find little sympathy in their nefarious efforts outside of their own fry-ient circle.

THE CLAY PIGEONS were "slaughtered" yesterday beyond count. This target is growing in favor, having very largely supplanted glass balls, over which it possesses many very decided merits. We understand that the enterprising Ligowsky firm are about to perfect the manufacture of a cheaper trap, so that the five-trap style of shooting will be within the means of all. This is by far the most beautiful form of practice with the "birds," and promises to be very popular.

SEND IN THE NAMES.—We should be glad to receive from our readers all over the country the names of their friends who may be interested in any of the departments of outdoor recreation of which the FOREST AND STREAM treats, and who do not now take the paper.

SALMON IN THE MERRIMAC.—We learn from Mr. Samuel Webber, late Fish Commissioner of New Hampshire, that the salmon have at last made their appearance in the Merrimac River at Manchester, and one "guessed" at from eight pounds to ten pounds has actually been seen passing the Fishway at Amoskeag Falls. This proves the prediction which, it will be remembered, Mr. Webber made, that we should see a score of smaller fish, from the plant of 1879, this year. The season is later by two weeks than last year, but the salmon are on their way up now. Ten were seen in one day in the fishway at Lawrence, Mass. What is of more especial interest to sportsmen, however, is the fact that a salmon weighing ten and a half pounds was taken last week in the Merrimac, at Concord, with the artificial fly in a legitimate manner. We have always believed that one was taken three years since by a bass fisher, but owing to the fact that the prohibitory law was then in force, we could never prove the fact; but this catch of last week proves that the salmon bred from Penobscot stock will take the fly in the Merrimac. We note the following change in the New Hampshire Fish Commission, viz., the appointment of Elliot B. Hodge, of Plymouth, Superintendent of the Hatchery, as Fish Commissioner, in place of A. H. Powers, resigned. The Commission now stands: Colonel George Riddle, Manchester, Chairman; E. B. Hoage, Plymouth, Superintendent of Hatchery; Luther Hayes, South Millton.

THE "AMERICAN KENNEL REGISTER."—The anxiety with which the monthly issue of the *Register* is looked for by its already large circle of readers, is a fair measure of the high esteem in which it is held by the owners of well-bred dogs. We regret, however, to see a tendency among those who have animals to be registered to hold back their entries until the last moment, and then just at the first of the month to send in their blanks in a lump. This course, while apparently serving no good purpose for anyone, puts the publishers of the *Register* to serious inconvenience, and has in one or two cases caused a delay of several days in the issue of the periodical. Whether the tardiness in sending in entries has any real reason or not, we cannot allow it to interfere with the date of issue of the *Register*. To examine the pedigrees, correct the mistakes which the owners make, and prepare the material for the printer, involves much labor and time.

OCCASIONALLY we receive questions from correspondents who ask us to decide for them wagers, and sometimes decisions are requested in games of cards. In the past we have good-naturedly answered some inquiries of this description, but as they are entirely out of our line, we shall no longer do so. The FOREST AND STREAM does not hold stakes nor decide bets, nor does it profess to be an authority on games of chance. There are many journals which give attention to these matters, however, and we recommend those of our readers, who may be unable to decide such questions in any other way, to apply to them. Questions pertaining to matters within our own scope will, as they have always done, receive attention, but those which have to do with betting or cards will seek the seclusion which a waste basket grants.

AMATEUR PHOTOGRAPHIC EXCHANGE.—The amateur photographic outfits are now in general use by sportsmen, and large numbers of picturesque views are secured by them on pleasure tours. We have been greatly entertained in examining many such pictures which have been sent to this office from our friends. They are delightful suggestions of the pleasures of camp and cruise. It has been suggested that an exchange of such views would be welcome to many amateur photographers, who might thus add to their own collections the pictures of others. We think the suggestion an admirable one.

AMERICANS MUST LOOK TO EUROPE for "sporting novel ties." The latest is a kangaroo hunt, provided for the huntsmen of Vienna by an Englishman, who has transported to the Prater thirty of the Australian marsupials. We learn from our esteemed contemporary, the *Allgemeine Sport Zeitung*, of that city, that great expectations have been raised among the Viennese, who are eagerly awaiting the chase of the novel game.

THE FIRST BOYHOOD EXPLOIT with rod or gun is always a theme of pleasant recollection. The pages of FOREST AND STREAM contain many accounts by the graybeards of their first successful hunt or fish long ago. "It seems but yesterday that I caught my first trout," said Henry Ward Beecher the other evening, upon the celebration of his seventieth birthday.

you, my marster, dat ole fool nigger he des riz up on his fouts, an' open his mouf clean back ter his ears, an' den, sur, he bu' nuck his head, and he des farly howl."

Here Steve, imitating old Lawyer, sprang upon his feet, throw back his head, and sang a portion of "Mars Garrett's himne chune," as follows:

"Hens and chickens gone to roos,  
De hawk her down an' he bit dat goose,  
An' he bit dat goose in de middle er de back  
He made dat goose go quack, quack, quack."

"Bless yer soul, my master," he continued, when he had ended his singing, "dat yaller town nigger, ever des farly foun' outen his bones. He didn' know what ter do, sur. He fuss look like he wanten jump outen de back winder. Den he des tun 'roun' an' he gits blue mad in de face, an' he des ups wid dat red merrocke hime book, an' he draw back, an' he truck Ole Lawyer *harsh right* atwixt his eyes, sur. He des farly knocked dat ole nigger somerset clean ober Mars Garrett an' Mars Shep. But bless yer, 'fore you knode it, sur, dat ole nigger des riz on his fouts ergin, an' he made dat huge an' dat preacher nigger, an' he lit clean ober dat pulpit right outen dat yaller town nigger head. Den day had it, sur—googe eye, pull har, foot and to-nail; fuss oue on top an' den 'tother, Siser Phoebe Auer, she git so skened she des riz on her fouts, an' she holler, 'Glor'y halleluger, Jes bound fur de kingdom,' but all dem yuther niggers, dat des lit outen dem winders like er passel er billy gonts ouen er corn-crit, 'cep'tin' dat yaller house gal, she jump outen de an' truck right straight up de hill fur de white fokes house. An' presenly here come ole nars an' ole miss tar'in' down de puff ter de church house. An' ole marster he cuss, an' he say, 'What de debil's got inter you niggers you can't go ter hebin 'dout fighdin' on de road?' Den dat yaller town preacher nigger what look like he bin wra'shin' er bum-bee nigger, he pint at Ole Lawyer, an' he say ter ole marster, how dat big mouf nigger ober dar wer singin' corn-shuckin' songs, an' suckerin' de narsin' services. Den ole marster git red in de face like he do de 'lection' dat an' den, sur, he cuss twel de swet it des drap offen de cend er his nose. Den he call dat yaller house gal bring him his cow wide, an' sur, he des literly wode dat ole fool Lawyer clean out, sur. He did fur er fack, my master. Den ole mars tun rou'n' an' he shuck his fis' at Mars Garrett, an' he say, 'Dis some er your dan' foolishness, my young feller.' But Mars Garrett he never say nothin', he des come up close wher I am, an' he say ter me, 'Baw Steve, you kin rake up er muff har oue dat pulpit ter make yer a good matrus; Ole Lawyer he owe you somthin', anyhow, for larnin' him dat buterful himne chune last night.' Den he laff an' he say, 'But didn' dat dam town nigger hav' er happy time uv it dis mornin'.' But ole 'miss' she come rou'n' dar whar we wer, an' she whisper to Mars Garrett he better be gittin' way from dar 'fore his par get tested. An' Mars Garrett say low er ole miss' 'oot leup de ole Garner offen his trail twel de scent git ole, he bleve he will. But bless yer, ole marster he done clean gin out. Me an' big Andy had ter truck an' tote him up ter de white fokes house. He so flustered by dat ole nigger dat it kild him up wid de gout fur moso fo' mounis. Yasn, my master, laid him up in de bed fur moso fo' mounis, sur. Mars Garrett he want me larn Ole Lawyer one yuther dem what he call himne chune song, what I knode, 'bout

"Adan an Eve day chum er tree,  
An Eve wer sture dyer er rumble bee;  
O carry de nigger ter Mary."

But bless yer soul, dis here nigger never larn dat ole fool narsuther himne chune sure say you're born." TUCKABOE.

## THE DOCTOR AND THE GRIZZLY.

A HOT WEATHER YAK.

TO hunt wild beasts and brave them in their lair, to conquer and destroy them, has been the ambition of heroes, modern and ancient. Man brooks no rival in the animal kingdom, but disputes with the fierce denizens of the forest supremacy in the wide domain of Nature.

The question may well be asked, whether man is not more savage and blood thirsty than the beasts themselves, seeing that they slay their fellow-creatures from the mere love of slaughter; while they slay but to appease their hunger. To destroy would seem to be natural to man; nor has civilization altered his nature in this particular. Civilized and enlightened society sends forth the tiger hunters to India and the lion slayers to Africa.

Coupled with this destructive trait, there is in most of us the love of adventure, which must be gratified even though the penalty paid is the chase. There is an excitement about danger, that fires us on, whether to the "imminent, deadly breach" or to the tiger's jaws.

The writer is not ashamed to confess to the same love of the chase that animated the demi-god Hercules, and like with "the Clastic Huntress of the silver bow." And there are times when my soul, revolting from the sordid affairs of daily life, seeks to free itself from society and its trammels, and to be relieved of the chase.

It was while in such a mood, not long since, that I word came to me that a man had been killed by a bear while "prospecting" in the San Antonio Cañon—one of the many cañons which have their source in the coast range of Southern California. It had long been my ambition to kill a grizzly bear, and it seemed now was the opportunity to gratify that desire, and, at the same time, to avenge the death of a human being.

I immediately set about ascertaining the locality as nearly as possible of the fatal encounter, and sought a companion for the perilous journey, not that I expected him to kill the bear, but because I wished to have a truthful witness of my own exploits. Doctor Blank, an enthusiastic sportsman and an experienced mountaineer, gladly agreed to accompany me. The weapon I carried was a Winchester rifle, .45 caliber, 60 grains of powder in the cartridge. It was one presented me by a friend—my comrade in many a hunt elsewhere. The Doctor was armed with a weapon similar to my own.

On the morning of April 9, we set out on foot from the mouth of the cañon, packing our blankets and provisions on our backs. Our route lay up the cañon, and we trudged along merrily enough, the Doctor enlivening the march with some of his best songs.

The ascent for the first few miles was easy; after that, the walls of the cañon narrowed in, confining us to the bed of the stream, here filled with huge boulders, over which we clambered with difficulty.

At noon we halted at a point where there is a beautiful

meadow, in the midst of which gush out the springs that feed the stream of the cañon. The Doctor had brought along his rod, line and flies, and it was not long before he had caught trout enough for a meal for two men, hungry enough to devour. He lingered long at this romantic spot, and then reluctantly took up the march over a wilder and more rugged trail. Night found us some twenty miles from the mouth of the cañon. The topography here changes from a gorge to an elevated plateau or bench on the mountain side, intersected in places by ravines, and, for the most part covered with brush, with here and there a meadow to be seen. This was the place we sought; it was near here that the poor miner had met his fate. We camped for the night by a little stream, and building a big fire, sat down to our meal. After it was over we lay down, rolled in our blankets, our guns loaded and at our right hands.

It had been a long time since I had slept out, and the novelty of the situation kept me awake for some hours, stirred though I was. At last I dropped off to sleep, to be awakened shortly after by the unearthly scream of a mountain lion. We both leaped to our feet at once and seized our guns, awaking to be attacked, but we could see nothing of him, so we lay down again. The knowledge that we were so near this midnight marauder, however, kept us from again sleeping. Shortly before day we heard the brush crashing, as though some heavy animal were making his way through it. This noise I supposed was made by a bear, as I know that the mountain lion moves stealthily, and a deer would not make such a noise. The Doctor was of the same opinion, and, knowing my anxiety to kill a bear, he very generously moved so as to give me the best opportunity to get a shot, placing me between himself and the place of the noise. But the animal passed on without disturbing us; we kept very quiet, as we were not eager for a night encounter with a bear. It is dangerous enough in the day time.

At dawn we were up and eating our meal. Just so soon as it was light enough to see objects at a distance of fifty yards, we buckled on our cartridge belts, took up our guns, and started off. I noticed, at the time, that the Doctor carried a small case in his breast pocket. Being curious to know what the case contained, I inquired of him what it was. He handed it to me, and on the outside I read:

DR. BLANK'S  
DOUBLE ACTION LIFE-PRESERVING PILLS.  
Calibre—45, 60 grains.

I returned them to him with a smile, and asked him why he brought such stuff into camp with him. "I am never to get out of this," was his answer.

Little did I dream of the important part they were to play in my subsequent experience. But I anticipate. We went in the direction taken by the animal we had heard making a noise in the brush; and soon struck the trail of a large grizzly. It was evident that he had not long passed; so we followed it up the valley, and along the margin of a little trickling stream, with patches of clover growing along its banks. On the roots of this clover he had been feeding.

We had probably gone about a mile from our camp, and were just turning an angle in the valley, when we suddenly caught sight of the largest grizzly I have seen my fortune to see. He was tearing up the roots of the clover not more than fifty yards from us. His left side was to us. I saw the Doctor turn pale with excitement. Whispering to him to stiffen his left ear, I rested my rifle on that prominent part of his person, and taking dead aim for the bear's breast, fired. At the report of my gun, the Doctor, stunned by the explosion, I suppose, fell as though he had been shot. Not so with the bear, however, for starting up with a snort, he looked around. I fired again, but shot wild, and then saw the bear start for us, with hair on end and growling fearfully.

I have looked into the cannon's mouth when the foe was at the breach, and have seen the advancing wall of hostile bayonets at the charge—all the without flinching, if not without fear; but never have I beheld anything that so inspired me with terror as that bear. Shall I confess it that fear took possession of me, even so that I dropped my gun and ran?

Yes, I fled ignominiously and left my poor, helpless comrade to his fate. Yea, more, I entertained the base and selfish hope that the beast would eat him, become disgusted with human food, and so escape. Some fifty yards he lay where I had fired there was a scorching hole in the twelve feet high, and for this tree I ran as fast as my legs would carry me, and swung myself into its branches none too soon. The bear clutched at my feet as I drew up. I climbed to the top, and looked trembling down. The bear seized the tree in his grasp and endeavored to tear it up by the roots; but it was rooted in the rocks, and was too much for even his giant strength.

I breast the storm. I knew he could not climb the tree. On looking at him closely I could see the hole in his left side where the bullet had entered and on the other side where it had passed out. It must have torn his heart to pieces. The blood was flowing from the wound and the bloody froth was on his lips. Surely he must soon die, I thought. But he showed no sign of failing vitality, and I soon came to believe that a bear may live without a heart.

I saw plainly now that I should have shot him through the head or else through the spine. But it was too late to rectify the mistake; my gun was on t ground.

The bear would not leave the tree, but kept looking up at me. After awhile he took a large boulder in his paws, and laid it at the foot of the tree, and then another and another. At first I was puzzled to know what he meant, but soon the terrible truth dawned on my mind that he was heaping stones on the tree, that he might stand on them and reach me. The thought was enough to make me start, and for a moment I thought of leaping over him to the ground and taking my chances in running. But I knew he would overtake me. Then I thought of the Doctor, and turned my eyes toward the place where he had fallen. He was not there. I shouted his name, and saw him thrust his head out from a crevice in the rocks close by where I had left him. How he managed to squeeze his body into so small a space is a mystery to me.

"Get your gun and shoot the bear," I screamed to him. "Are you going to stand still and see this brute eat me?"

He did not answer, but crept out cautiously to where his rifle lay, and ran quickly back to his retreat. I saw him aim, and then saw the flash of the gun—and one of my boot-heels flew off. I implored him to aim with more care next time, and to shoot at the bear, not at me. I waited with much trepidation to next shot, but I did not fire. The bullet sang a dirge by my ear, burning it as it passed. Then I asked him to desist, for fear that he might commit murder and that I would be the victim.

Slowly but surely the bear was piling up the rocks at the base of the tree, and must soon reach me. What hope was left to me now? Preposterous as it may seem, I, for a moment, thought of leaping into his cavernous throat when he reached up, but the fear of being caught between his teeth in passing prevented so foolish a step.

The bear reared up again, and I had to draw up my feet to prevent his reaching them. I looked into his hideous eyes and they seemed to burn with the fires of hell. I gazed until I began to believe that he was the "Great Beast" himself come to claim me for his own.

For a while hope deserted me and I sat in a kind of stupor, from which I was aroused by a thought that flashed across my mind. Acting upon it, I shouted to the Doctor. "Draw the bullet from a cartridge, quickly, and replace with one of your pills!" Load your gun with it."

"All right," came the response. "Now run out," I said, "and attract the attention of the bear."

In another moment he came out yelling and capering about. This was more than the bear could resist, and he rushed for the Doctor, who fled to his retreat, followed by the bear.

"When he opens his mouth, fire straight down his throat," I yelled.

I heard a shot, saw the bear stagger back, then rear up and place his paws on his abdomen, howling all the while as if in pain. Then he started to flee, but fell into convulsions horrible to behold, tearing up the earth in his death struggle. Gradually his movements ceased. His limbs stiffened. He was dead.

Then the Doctor emerged from his crevice in the rocks, and rushed up to the bear's carcass and kicked it and leaped upon it, yelling all the while like a devil.

I descended from my perch, and going up to the Doctor, embraced him, and thanked him from the bottom of my heart. I told him that he was the dearest shot—with a pill—had ever seen. And I promised to use my influence in having him appointed physician to the county hospital, for the use of his pills, he could do the county great service in causing the permanent disappearance from earthly scenes of those rambling rakes of poverty and disease who are a burden to the community.

We stripped the hide from the bear, the Doctor claiming it as his trophy, but generously allowing me to keep the claws. The hunt was ended, for we agreed that we had had adventure enough to last for a while. We retraced our steps homeward with light hearts.

There I am now alive, and chronicle the events above narrated. I attribute to "Doctor Blank's Double Action, Life-Preserving Pills, calibre .45, 60 grains."

If any one should doubt the truth of this story, the Doctor is ready to verify it by affidavit. Or, if such person is ready to wager any money against the efficacy of the above-named pills, let him bring on his bear, and I will undertake that the Doctor will make a dead bear of him with one pill in five shots. Truly yours, EL GOZONELA.

LOS ANGELES, Cal.

## Natural History.

### THE SWAMP ROBIN.

*Turdus mustelinus.*

AMONG the many bright visitors at the bath (see "Bath-tub for the Birds" FOREST AND STREAM last June) is one whose graceful form is always a welcome sight to me. His quiet dress is in marked contrast with that of some of his friends, but there is a dignity of carriage, a certain self-respect, about the swamp robin, which lends an indescribable charm to his manners, and gives him an air of aristocratic lineage, utterly wanting in many of his more richly dressed, though frivolous neighbors. He approaches in a fearless, frank way that wins your heart at once. Drooping into the grass from the tree above, he comes directly to the water, never hesitating for a moment until reaching the tank; he will perch on its edge, and with head knowingly cocked to one side, survey the fussy little chippy, noisily fluttering just below, and making the spray fly from her wings as she washes. Seemingly not in the least hurry, he awaits the finish of her noisy performances with an air of such supreme superiority that chip is riled, and with tail erect, feathers bristling, and wings trailing, she rushes up the little steps leading from the bath, and darts at him in the most insulting manner; but with unaltered temper he gracefully jumps right over her head, and running into the water, calmly begins his toilet. The manner in which this feat is accomplished is indicative of such utter contempt for chippy, that she is completely paralyzed, and with a spiteful little shriek, she hustles off like an irritable little old woman from the scene of her discomfiture.

His method of bathing is different from most of his fellows; none of the noisy wriggling that characterizes many of our visitors, especially the smaller varieties of warblers, etc. He stands in about two inches in depth of water, and with one or two energetic shakes, his feathers are loosened sufficiently to give the water free access to all parts of his little body; then, deliberately squawking, he thoroughly soaks his breast and under parts for a second or so. The next move is to duck his shapely head well under once or twice, accompanying this with a dash of the wings that sends the water pouring over his back and down between his shoulders.

Two or three plunges satisfy him, and now he trots out and stands again, all dripping, on the edge, with his wings half extended, to let the air pass under, his bright eyes sparkling with the additional flash lent by his refreshing bath.

His rufous coat is a perfect fit, and his speckled shirt front runs into a snow white waistcoat, reaching down to the most delicate flesh-colored hose inclosing his slender legs. See him thus, and you will, with me, pronounce his attire to be the very perfection of taste in dress.

His preference for the present is keeping home in a snug cottage, built on the branch of a beech; there he will rearrange his daupned plumage, standing, perchance, on the rounding arch of a sturdy limb in full sight of his little lady, as she broods over her household, and blinks at him in admiration from the nest. Here, amid the dark green of the leaves, and the cool gray of the beech bark that covers the branches and interlacing twigs, the whole group forms a picture, perfect in the harmony of its colors, on which I never tire of looking.

During the heat of noontide he seeks the silent shade, and

like other ancient appliances, has become succeeded by a strenuous better because more correct in principle.

I purpose abstain from any comment, except that which leads this letter, upon the spirit of the letters you have so kindly published from various correspondents in their criticisms of each other. Let us all recognize the right of each to his honest convictions, and not consume time or space in useless questions. I respect what I consider the mistaken views of the muzzle-loaders, whether I agree with all that is said by the breech-loaders or not, and I certainly am entitled, and so are all the others, to a proper respect for the views expressed by us, mistaken as they may be, in favor of our hobby. As to "credibility," let us all assume that each is a gentleman, and that the sanction of publication in your columns is "creditable" enough that the views expressed are honestly believed and honestly intended, and that, mistaken as we may be, we are all striving to benefit ourselves by a friendly exchange of real ideas.

"Unless a man finds out and remembers why he misses he will never know how to hit, and unless he learns how and why our rival guns do their work, and how and why we differ as to their rival merits, we will never either of us be convinced but that each one is right and the other wrong."

WYOMING.  
I. S. I will refer all interested to the chapter on B. L. Rifles, p. 125 to 185, and the following chapter on "Penetration of Rifle Bullets," p. 185 to 200, in Greenleaf's work, "The Gun and Its Development," which I have not hesitated to consult, as well as other works, in writing the above—particularly ordinance notes—and reports of Chief of Ordnance of the U. S., showing experiments and work done by our country. From that it will be seen that our country is fully alive to the fact that high velocity and flat trajectory is essential to success at short ranges. C. H.

## Camp Fire Flickerings.

"That reminds me."

The dusky duck, in dusky team,

With his mallard cousins by me stream;

And the airy pintail sails the sky

With outstretched neck and watchful eye;

The green-wing teal, with lightning dart,

Flies close to the water's face afloat;

The blue-wing moovers at reckless pace,

Nor sees the shooter's blinding place;

The widgeon, with more wary care,

Swells the procession, pair by pair.

"Why don't you shoot?" "It was a sin."

"Oughter killed him too dead to skin."

My partridge is here, but the gun won't go;

The shells are melted, the cues won't flow;

And as I break the gun on the side of the boat,

Says my pard: "Ef you hit me in the nose again like

that, I'll kick you out of the boat, ef I don't I'm a

goat."

ME-HIT-ABLE.

Rev. J. J. Pearce, D. D., of Pennsylvania, is an eminent minister of the gospel, a successful politician (he has been a member of Congress), a true sportsman, and a noble specimen of a man.

While on a visit to friends in Iowa a few years ago he expressed a great desire to have a chicken hunt, and to be able to say on his return that he had dined on the noble bird of the prairie. A hunt was organized and he put himself at its head; and after a hard day's work he and many men travel to the prairie armed with a half dozen birds. These were given to the wife of one of the party to be prepared for supper, and the Elder was invited. Supper time came; there were pies, cakes, preserves, meats of every kind and variety, but no prairie chicken. The Elder was puzzled as well as disappointed. The woman being interviewed about it afterward, said that she had been better raised than to set the likes of a prairie chicken before a nice gentleman like Mr. Pearce.

A young man in one of the rural towns in southern New York was passionately fond of athletic sports, and also had a love for natural history. He spent most of his time in running foot races, playing baseball, and in shooting and mounting or studying birds.

One day a boy friend, just from college, said to him: "Spencer, I understand that you are becoming quite an athlete?"

To which Spencer replied, "Yes, I do stuff a good many birds nowadays."

QUILL.

## Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

Mr. Harrisville, Mich.—The address is No. 408 Bleeker street, New York.

J. P., San Francisco.—A reply was sent by mail advising the purchase.

G. H. W., Conway, Mass.—The party is a gunsmith in Chocoma, Wyoming.

W. H. We have written for the law. 2. Do not know where you will find the deacons.

F. B. B., Geneseo, N. Y.—The New York law forbids sailing for ducks, also use of decoy more than twenty rods from the shore.

G. W. T., Wateryburg, Conn.—There may be such a law with reference to the trees on State lands. Write to Verplanck Colvin, superintendent Adirondack Survey, Albany, N. Y.

J. B. A., Port George, Volusia County.—The sharpie is a flat-bottomed boat, usually about 2 to 3 feet to the sides. The chine (as it is called by barge builders) or bilge is, therefore, nearly square to the bottom. From the midship section aft, the bottom turns up to the transome, which is regulated in height by the depth flaps upon the boat. The transome in shape is a reduced midship section, reduced in breadth enough to give the boat the same taper at her deck line as the hull of the boat at the chine, giving the same transome flare to the bow. The dimensions of these boats are of the proportion of four beams for their length, that is, if a boat is sixty feet long she will be fifteen feet beam. For depth, some of them to the same dimensions have as much as six feet beam in their cabins, while (as set forth by Mr. Roosevelt in our issue of April 5) they draw but two feet. The hull is usually of a round bottom, and the transome (thimble-headed sails are set, the sail area being regulated mainly by the depth of the boat. A spinnaker is a three-cornered sail, with three corners, and is set from the mast to the boom, and is usually set to the shoulders of the topmast, the tack hanks down to a boom projecting from the mast in length whatever is found convenient, and the hanks are set from the mast to the lee side if the wind is before the beam, and to windward if running with the wind abaft the beam.

## PUBLICATIONS RECEIVED.

Guide to the Mesquora Lakes. Published gratuitously by the Northern and Northwestern Railway, Toronto.

THESE PRETTY ST. GEORGE GIRLS. A society novel. Philadelphia: T. B. Peterson & Bros.

LIFE AND ADVENTURES OF LEWIS WETZEL, the renowned Virginia ranger and scout. By R. C. V. Meyer, Esq. Philadelphia: Jno. E. Potter & Co. Wetzels was a frontiersman and Indian fighter; and this book is full of scalping, tomahawking, and other sanguinary deeds.

## Sea and River Fishing.

To insure prompt attention, communications should be addressed to the Editor, Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

ANGLING RESORTS.—We shall be glad to have for publication notes of good fishing localities. Will not our correspondents favor us with notes of desirable points for angling excursions?

### ANGLING AT BEAR LAKE.

ON the morning of the 12th of June, our party of five landed at our annual fishing ground on Bear Lake, in Clearfork county, Michigan. On our way up we agreed upon a prize, which should go to the one taking the largest fish during our stay. At noon of the first day, when we came into camp, it was discovered that the prize belonged, for the first time, to Sam, who brought in a black bass weighing three pounds. The next morning the writer landed a five-pound pickerel, which enabled him to own the prize for about an hour, when an unearthly yell from the other boat attracted our attention just in time to see the leap for life made by the largest pickerel I ever saw on a hook and line. My brother Will was master of ceremonies, and had the proud satisfaction of taking the fish into camp, as well as carrying home the prize awards.

It is about this capture, which I consider a notable one under the circumstances, that I wish to write. The tackle used was a nine-ounce split-bamboo rod; a small silk line; a 5-0 Carlisle-Kirby hook with gimp-succ and a live minnow for bait. The fight lasted nearly two hours, with the chances all the time in favor of the fish. During the first hour he had things all his own way, and towed the boat around about as he pleased. He tried all the devices known to his craft to get out of the tie that bound him, but the hook was placed just where he could not loosen it. He would rise to the surface and shake himself with his terrible jaws wide open, and then make a bee-line for the bottom of the lake at a rate of speed that burnt the fingers as the line passed through them, and threatened many times to empty the reel of its 300 feet of line. Fortunately the old fellow would change his course just in time.

Perhaps most of the honor is due to Mr. C. J. Wooden, whose knowledge and skillful handling of the boat kept the fish in deep water as long as he wanted to fight. When tired out Wooden steered him into shallow water, and stepping out of the boat, in water up to his waist, after a few passes got his thumb and finger in the victim's eyes, and carried him ashore without the aid of gaff-hook or net, and without a scratch. He weighed 26 1/2 lbs., measured 44 inches long, 30 inches around, and from what I could learn, was the largest fish ever taken in Bear Lake. He is now in the hands of Prof. Volke, of the Academy of Science, who pronounces him a very fine specimen of Northern pike.

CHICAGO, ILL., JUNE 28.

L. B. B.

### THE SHRINKING OF THE TROUT.

IN your issue of May 24, 1883, received by me this month, your suggestion that those who have fish items to tell would do well to send them in, struck me as an opening for a fish fact that occurred while I was stationed in New Mexico, at Santa Fé, as an officer in the army, about the year 1865 or '66—time slides by in such a slippery way that one cannot fix dates accurately, nor would one wish to who is on the other side of the hill and can only look back over it in memory—but I will vouch for the accuracy of the story, which should be a warning to all who place a line string of fish in a deep pool to keep them fresh, a process pretty well known to anglers as a softening process.

About the time of which I speak, New Mexico was the home of many sporting men, I mean fishers of men, and not fishermen, and better, more law-abiding and true-hearted fellows never lived; as well as as dangerous as a grizzly bear which, among the lowly lawless, was the most honest, brave or beautiful among their own people; leaving the sidewalk when a party of American ladies passed over it and remaining in the street, with their hats in their hands until they had left their immediate neighborhood; ready to fight for them at a moment's notice, and use freely the pistols which hung in their belts at all hours, day or night; true gamblers in their instincts to win, while they sat at their games, but open-handed to the poor, and to the poor, of whom there were many in that country at that time. Of this class of men I would now tell a fishing story that was given to me by one of the actors, the night after their return from the mountains.

The Rio Chiquito (little river), which runs through the city of Santa Fé, is a braiding mountain stream, which, for the greater part of the time is but a few feet wide and running through a channel cut for itself in the middle of the sand bed or arroyo some eighty or one hundred yards wide, and indicates the real width of the stream when the deluging rains of the mountain send it down as a torrent, with a rush and burst of water three or four feet high, rolling the great boulders in its mighty flow, so that the noise of their grinding can be heard for miles. At such times, of course, there is no fishing, but the process tears out great holes in the river bed, and during the times of its quietude are fairly well stocked with the true mountain trout. None of them are very large, but many may be caught that can be called good pan fish; and for the capture of a mess of these one of the sportsmen, Tom Stevens by name, started up the stream one morning, armed cap-a-pie, as an angler. The way was rough, the bushes were low and troublesome, the clamber over the rocks and fallen timber was tiresome; but Tom's luck was good and he arrived within a mile or two of the head of the Chiquito with quite a goodly number of fine fish strung on a willow stick. Their weight, added to that of the pole, began to be somewhat of a burden to him. Here, some yards from the edge of the stream, he found a pool which the rain water had formed in a depression of the rocks, and to this pool he consigned his string that they might be kept cool and fresh until his return from the further search to the head of the river.

Some time after Stevens' return from Santa Fé, and without his knowledge, Joe Cummings, a brother sportsman, was seized with a desire to fish the same stream, and knowing that Stevens had gone some time before, he borrowed a rod, and was soon tramping over the same trail that the first angler had taken. His luck as to numbers was good, but as to size, his fish did not attain what could be dignified

above that of fingerlings, still he cast and caught until he arrived at Stevens' pool, where he espied the string in the water. Full of fun, and ready for a joke at any time and upon any one, he quietly pulled out the willow, and stripping it of its spotted beauties, he replaced them, fish for fish, with his own diminutive ones, and put the string back in the pool; and then, knowing that it could not be long before Stevens would return, he concealed himself and Stevens' fish behind a huge moss-covered rock and awaited the appearance of his "pard."

The crashing of bushes soon announced his approach, then his head and shoulders were seen at a little distance, struggling through the undergrowth, and then, with a sigh of relief, he tore himself free, and stepped into the little open space, and bent his steps toward the pool to recover his fish, Cummings, from behind his rock, watching him, his eyes beaming with fun, and awaiting the denouement. Stevens stopped and stooped over the clear water and stretched out his hand for the willow, but caught sight of the trout just as he did so, when he resumed his perpendicularity with a jerk, as a knife blade flies to its open position, gazed intently at him on his knees, he looked long and intently, with his eyes fairly popping out of their sockets. After a long-drawn, sonorous sigh, he said, "Well, you have shrunk the — of any fish that I ever saw."

The attitude, the wonder and the exclamation were too much for Cummings; he fairly howled with laughter, when Stevens took the joke and "took after him simultaneously, and then there was a foot race around that clearing that day of course, ended in the capture of Cummings, who was so convulsed with laughter that there was but little speed left in him. A compromise was effected, and Cummings' flask being reasonably full and Stevens' empty, they were soon laughing together over the exchange of the trout; but Stevens made Cummings promise that he would not let the joke out. It was too good, however, to keep, and champagne, paid for by Stevens, was consumed on the morning after, for that night in Santa Fé, who had not looked for anything better than the wheat whisky of the country.

W. H. B.

### THE INTERNATIONAL TOURNAMENT.

OF the fly-casting tournament, the London *Fishing Gazette* says: "But that the affair was a most interesting and successful one will not, we think, be questioned by anyone who was present; and of the hundreds who took up their places to view the commencement the majority remained until after seven o'clock, and many until past nine, when the proceedings were cut short by darkness. Undoubtedly the most interesting event was the casting by Mr. Reuben Wood, which was watched with the greatest interest. It will be seen that Mr. Wood took first prize in both the single-handed fly-rod competition and the salmon fly-casting competition, though in both competitions he was very closely pressed by Mr. Mallock, of Perth.

"The wind was most trying to the fly-casters, now coming in a steady, strong gust, and then, after a rest, chopping about two, so that the fly-casters were in a very bad way of lawncases for it. The chief difference in the American and English casting seems to be more in the rods and lines than in the method of using them. Mr. Wood used a powerful 'casting' split-cane rod and a very heavy winch line—a much heavier winch line, in fact, than is used for anything but salmon fly-fishing in this country. Later on, Mr. Wood very kindly gave an exhibition of his skill with the 50z. winch, which was very much appreciated. We had the pleasure, a few weeks ago, to take Mr. Wood to Hungerford to fish the Kennet, and had ample opportunity to see the wonderful manner in which he can make the slim little light-weight rod send a great, heavy winch line out over the water. Mr. Wood was surprised at the fineness both of the gut and winch line generally used in trout fishing in this country; in fact, he says that only on the Caledonia River saw a rod (hook, line and reel) as ever used in the States. The winch line must be used to get the proper work out of the split-cane rod. The fly-casting this time took place from a platform raised about two feet from the water, and not from a punt, as was the case last time."

One of our London correspondents says, in a private letter: "You will see by the papers that Mr. Wood's victory is laid to the superiority of American rods and lines. This new point, raised to some extent, and no doubt will please Mr. Wood as well, as he has charge of the angling exhibitions in the American Department of the Fisheries Exhibition, and this judgment will no doubt result in giving the first prizes to American rods. Mr. Wood has offered to take part in a friendly cast with any one in England and to use their rods and lines, either with single-handed trout rods or salmon rods. Mr. Mallock, who came nearest to Mr. Wood, whipped the ground behind him so that his flies were most damaged, a thing that Mr. Wood did not do."

We thoroughly believe in the value of these tournaments as a means of demonstrating the best methods of hand'g the rod, and therefore we gave the reports of the last one in full in our last issue, and will continue to give such comments as our correspondents may send, or we may find in English journals.

### BLOOMING GROVE PARK.

THE Blooming Grove Park Association has been improving its grounds for the past two years, and is now proposing to establish a hatchery for trout. The new club house, and its both comfort and appearance are well attended. We recently paid a visit to the club, and drove over to Lake Laura and took some bass. This lake is singular in being shallow in parts and yet free from vegetation, the bare rocks looking as clean as if washed by surf. The bass are plentiful in this lake, but as a rule are not very large. They take the fly readily, perhaps because food is scarce, which may account for their small size. In Lake Laura, near the club house, there are large trout, but will not take either fly or bait, although they can be plainly seen at times. This is thought to be on account of food being so plenty, and if so, the fish will eventually increase until food becomes scarcer when they will gladly accept a bait, even if a line be attached to it. With a hatchery there the trout streams should be brought up to their former standard in a few years.

The croning park contains some deer and others will be purchased, some fawns were dropped this spring and will be turned out. Bears are frequent, and we saw where one had opened an ant-hill in the road, on the way to Lake Laura. The woods abound in game of many kinds, and the club is on a sound financial basis. Some years ago it seemed as if this organization was in a feeble state, but its membership is now

full, and of good men. Some years ago it bought some thousands of acres in the wilds of Pike county, Pa., and now it has over 800 acres under fence as a breeding park for deer.

### SMALL FRY.

*Editor Forest and Stream:*

In your issue of June 7, a correspondent gives a glowing and enthusiastic recital of his wonderful prowess as a trout-killer. I should scarcely have noticed the rhapsodical effusion, if the writer had not been so overcome by blind infatuation as to use the expression "speckled beauties," that terrible *bête noir* to sportsmen, which he introduces with heart-sickening recklessness, and utter disregard for the finer feelings and feelings of sensibilities of your readers. I supposed it was a principle well settled and fully understood, throughout the length and breadth of the territory which constitutes the geographical distribution of FOREST AND STREAM, that if any man should assume to himself the garb and semblance of sportsman, and had the hardihood to force that nauseous phrase upon the stomachs of your innocent and unsuspecting readers, he would, with common consent, be unanimously ejected from the fraternity, and be metaphorically drawn and quartered, for the warning and edification of posterity. The correspondent and his companions devoted five hours to the heroic exploit of killing one hundred and seventy-five trout, of which five were one-pound fish, fifteen half-pounders, and thirty-four ounce specimens, leaving a hundred and twenty-five which weighed less than four ounces. The writer is so sure of himself, so sure, on the poor little innocents, I am reminded of a story told me by an attaché to a traveling dramatic company, a musician named Reynolds. He said he was fishing a trout stream in Massachusetts, and he had been engaged for several hours, when a farmer ascended him and asked, "What luck?" "Oh," replied Reynolds, "I have caught twenty trout." "Where are they?" asked the man. "I have them here in my vest," replied Reynolds, "I will show you catch them," asked the farmer. "That's a secret of mine," said Reynolds, "but I don't mind telling you, only don't give it away. I put a big grasshopper on my hook, and whenever a trout comes along the grasshopper swallows him. When he got full I took him off and put him in my pocket."

The sort of fish which constituted the bulk of Mr. Mure's catch, are such as we commonly catch here when we drag with a mosquito bar for bait.

A few days ago a friend of mine, Bob Osborne, caught in Bayou Danchiff, near the crossing of the Vicksburg, Shreveport and Pacific Railroad, one hundred and forty-seven pounds of fish with a single rod, most of them being black bass and white perch. His fish ranged from one to two and a half pounds. One of the perch weighed five pounds, a very unusual weight for this fish. Let Mr. Mure and his companions try our Southern waters. We will give him a hearty reception and good sport, but let him eschew "speckled beauties" in his future ebullitions of enthusiasm.

OJACUITA.

### FISHING AND LYING.

*Editor Forest and Stream:*

It is a singular fact that these two accomplishments usually go hand in hand throughout the world, and doubtless accounts for the remark attributed to the blackfish, to wit, "I don't mind being hooked so much, but it worries me to think what lies will be told about my size and weight." For nearly two thousand years this propensity has been indulged by piscatorial sportsmen, and it is worthy of comment that in pursuit of that branch of moral culture the lower animals have generally been selected for illustration. We are all familiar with the boy's story of the thousand cats which he saw on his father's woodpile, and which on investigation was reduced to "our cat and another one."

The periodical appearance of these "fish stories" is known as "the great American sea serpent," which is seen every now and then hovering about our coast, seemingly in doubt whether to swallow an Atlantic steamer or pull Long Island away from its moorings, is faithfully reported to the world by the press.

One of these "fish stories" has lately been hooked up out of Lake Michigan or elsewhere by a Chicago editor, and the editorial angles and cut and moral city have scooped it into their own columns, with an exaggeration which would astonish the blackfish spoken of had not the frying pan destroyed his powers of appreciation.

The science of "fishculture," as represented by this tale, can hardly be expected to go much further, for what was a mere little "killy fish" at Chicago has become a right whale on reaching the seaboard. But, without further preface, let the story be briefly given.

The writer is charged with having said that our worthy President Arthur is not fit to be the Chief Magistrate of this great republic, although a gentleman and a scholar, because "he goes a-fishing." Now, to deny such a silly story would be as silly as the story itself, and reminds the undersigned of the prudent remark of an old lady, who lived near where he was born, in reply to the assurance of her son that his gun was not loaded, to wit, that "she had heard of guns that would go off without lock, stock or barrel!"

HENRY BROWN.

LARGE CAVALLE OR POMPAÑO.—Mr. George Gilbert, of Pilot Town, Pa., recently sent to a friend in Jacksonville a cavalle weighing 49 lbs. and measuring 3 ft 8 in. The name of cavalle, or cavallé, for Dr. Gill spells it both ways, is apparently derived from the name of the fish of the family *Carrangidae*. Gill gives it as a South Carolina name for the fish known as pompano on the southern coast and in New York. In his "Catalogue of Fishes of the East Coast of North America" he records three pompanos—the *Trachynotus carolinensis* (the one we have referred to), the *T. glaucus* or smooth pompano, and the *T. ocellatus* or short pompano. Within the past three years we have recorded the capture of large specimens of *T. glaucus* weighing from eighteen to twenty-four pounds, a fish whose habitat is the west coast of Africa about the Canary Islands and in the same latitude as Florida. It has been suspected to be merely the adult form of our common pompano or cavalle. If so then our fish is not full grown, and in common on our coast only in its early life. Our valued correspondent, Dr. Keworthly, has been charged with drawing the long howl in saying that he had caught one of these fish in the Gulf of Mexico, Florida, which weighed sixteen pounds, a fact that we do not doubt.

BLACK BASS IN LAKE ONTARIO.—The Oswego, N. Y., *Pollardian* says: "Just now, not only the people of this city but of the whole country along the south shore of Lake Ontario, are having the rarest sort of sport in angling for black bass. It may be that this is an exceptional year—though we doubt it—and that the bass have come to this shore in unusual numbers, about which, also, we are doubtful; but of one thing we are certain, and that is that some of the finest sport of which we are capable is being enjoyed by the fishers on the lake. In a general way, and of a verity, it may be said that the whole south shore of Lake Ontario, from Pulleyville to Cape Vincent, is one series of black bass fishing grounds. Of course there is much of this shore—the sandy and gravelly portions—which is not haunted by the black bass. But, wherever there are broken rock bottoms, or from five to fifteen feet in depth, there the fisherman may safely throw out his lines, and there he will get the most satisfactory results. The city of Oswego seems to be most favorably situated with reference to the noted black bass haunts. Lewis's Bluff, some six miles up the lake, is one of the best points on the whole shore, and it can be easily reached either by boat or carriage; by the former in an hour and a half, and by the latter in an hour, over a delightful route. From five to fifteen feet in depth, the rocks run out a mile and a half into the lake, with a depth of water ranging from five to fifteen feet. This ledge varies in width from a quarter of a mile to a mile, and it, and the bays near it, are now full of black bass—the smaller fish being in the shallow water, and the larger in the deep. This condition holds good on the ledges and surrounding bays all along the shore. Coming east from Lewis's Bluff, and about half way to the city, the fisherman runs upon Port's Shoals, and a better place for an afternoon and evening's sport is not to be found. These shoals cover considerable ground and there are days when the well equipped fisherman can have sport which he will not fail to remember with pleasure. Good baits, carmen, hunchon and minnows can be had at Lewis's Bluff. Coming down the lake and passing east of the city, the angler will find a number of fine fishing points of land, all of which indicate rock bottoms and deep beds. In any of these, if his lines are out, he will soon have trouble." Four miles down there are large areas of bass bottoms from which fabulous numbers of the gamy tribe have been taken this season, and of unusual size. Continuing east, we strike Pleasant Point, one of the notable fishing grounds of this shore. Here Capt. Sam Nichols has a comfortable place, where the fisherman can find comfort and hospitality. The point is convenient to many famous ledges, and it is much favored by parties from the city and surrounding towns for its pleasant scenery, as well as for its notable bass beds. Three miles further east is Mexico Point, one of the loveliest spots on the south shore. Here is Mr. W. H. Wright's hotel. Just now, and probably until the latter part of July, the troilied, live minnow is the "killing" bait. These minnows are taken in great numbers, of wonderful execution now. Very large bass are taken with minnows—still fishing—but this is no sport for an angler. If you would have sport next to fly-casting, do this: Take a fly-rod—say from ten to fourteen ounces in weight, with a good reel, and from seventy-five to one hundred feet of oiled silk line. Put on a twelve-foot leader and three flies—not large and changey changes of leaders such as some imagine are necessary, but a live minnow on the hook, and a three quarter ounce sinker on the line about two feet above the leader; troll slowly over the ledges in the vicinity of any of the points named above, and if you are an angler, you will have fun, the like of which you have not had. We know a man—a Mr. Loomis of Syracuse—who within the last week, with this kind of tackle and skilled manipulation, killed in one day near Mexico Point, one hundred and thirty-two black bass that weighed two hundred and fifty-eight pounds—and it wasn't much of a day for bass, either."

A BLACK BASS IN.—Capt. J. W. Collins, of the staff of the U. S. Fish Commission, now at the International Fisheries Exhibition in London, tells the following story of how one of our colored brethren came out ahead of an Indian from Canada in the way of posing like a tobaccoist's sign. Capt. Collins says: "We have among our exhibitors at the London International Fisheries Exposition several fine cases of colored fishermen. One of these had been placed near the display of whaling implements, and another close by the main entrance to our section, facing the broad aisle between the United States and Canada, down which passed the royal procession. A short time before noon the Indian brought over by the Canadians took up his position on their side of the aisle, with his feathers, beaded leggings, etc., he made quite a sensation on his first appearance. Not to be outdone by 'Mr. Lo', a North Carolina darkey, who has been employed as a laborer in our department, acting under instructions, dressed himself cap-a-pie in a suit of oil clothes, and took up his position, or in hand, opposite the 'noble red man' from New Brunswick. Standing as erect and immovable as a royal horse guard on duty, and scarcely distinguishable from the cast of a negro near by, he became, as soon as the opening ceremonies were over, the center of attraction for a large crowd which gathered round, and by all the arts and devices which are usually resorted to on such occasions, tried to bring a smile to the stolid and statuesque colored individual. But he displayed a most remarkable control over his features. Though he was pinched and pushed, and his fingers forced between his lips and between his fingers, not a muscle quivered, and scarcely the wink of an eyelash told the gaping crowd that he was different from the plaster cast. Some of the people were deceived into the belief that he was a cast. One lady exclaimed: 'Well, I do declare, these Yankees are very clever people; they are sure to get ahead of all the rest of the world. No one could tell but what that colored man was a better specimen of a human being than the white man.' To make the darkey show some sign of motion, broke out with: 'That beats the horse guards all to pieces. I never saw anything like it.' It is needless to say that this caused the crowd much amusement during the entire afternoon. The Indian was forgotten, and after showing his approval of the negro's solidity by an 'ugh,' left the scene, probably retreating to smoke his calumet outside of the buildings, where no prohibiting notice stared him in the face."

BLACK BASS IN THE POTOMAC.—Dr. W. S. Hoke, of Philadelphia, with his brother and party of friends from Chambersburg, Pa., will go into camp at Falling Waters, on the Potomac River, and there will be a large bass fishing. The bass at this point on the river are large and sport is anticipated. I shall have daily accounts of the catch from the camp.—Hoxo.

THE CARP AS A GAME FISH. A correspondent of the *London Fishing Gazette* writes of carp fishing at Wimbledon Lake, and says: "When carp fishing, the anglers cease to try and pull out of the Wimbledon Lake carp weighing from 4 lbs. to 20 lbs. without a reel? You will scarcely believe it possible, but many of these so-called carp fishers visiting this lake never think of using a reel. The consequence is, as 'L. B. Esq.' says, 'the breaks away, as compared to the captures, are most alarming.' I shall not forget to mention that these same gentlemen contradicted me in a future issue, in answering my question. I ventured to suggest, in the most polite manner, what the result would be in the case of hooking a fish of 5, 6, or 7 lbs. In reply, he observed: 'It appears to me you know very little about carp fishing. With a rod like this, I could play a carp 5 or 6 lbs as easily as playing a roach of 5 or 6 oz.' I should no more think of using the said rod for taking carp, Mr. Editor, than a butcher's pole. The rod used for club or barbel fishing in the Trent is what I should use. Unless I am very much mistaken, I said: 'You would not even have the chance of playing him.' 'Why not?' 'Why not?' because he would be gone before you could say 'Jack Robinson.' I here left him, and within ten minutes of my doing so he was literally smashed all to ribbons by a perfect fish-keeper afterward informed me that this very individual was broken up no less than three times in one day."

Two or three years ago the Erie Game and Fish Association secured a large number of German carp minnows, which were placed in the bay here. It is impossible to say the abundance of the already excellent stock on our fishing grounds. Scarcely anything has been heard of them since they were placed in the water and their fate was a matter of conjecture for some time. It was not known whether the little fellows could manage to escape the hungry maws of our larger brethren, or whether they had been devoured on such delicate food as the little carp. The development of this spring's fishing season shows that the experiment has proved a success, and that a number of the German carp have become full-grown, and are biting well, but of course it cannot be known yet whether the supply be large or small. From time to time small German carp have been captured occasionally. In this spring quite a number have been caught, and the people in addition to our game of black bass will be the attraction of hauling in a lot of light and as excellent eating. Mr. Fuchslocher was out yesterday with a friend, and during the afternoon they captured two big fellows weighing about five pounds each. Mr. Fuchslocher says that the carp die game and fight desperately for life, so that the sport of hauling them in is fully equal to that of a good struggle for a lively black bass, with this disposition not to be caught if he can help it. The carp somewhat resembles a whitefish, but are more of a silver-gray in color, and as soon as their favorite haunts are well established they will be sought out with great avidity.—Erie (Pa.) Observer.

THE JORDAN.—To those who have visited the Jordan River it is unnecessary to say anything in praise of it as a trout stream. Few fishermen are ignorant of its qualities, but to those who are not acquainted with it, we say come and try it, and like others who have done the same, go away satisfied that it is one of the finest streams in the Northwest. We refer those wishing an extended description of its beauties to the little booklet, "Detroit and the Development of Resorts of Northern Michigan," issued and distributed gratuitously by the passenger department of the Detroit, Lansing & Northern Railroad. Excellent catches are reported already, and sportsmen are turning their steps toward the Jordan in large numbers. First-class accommodations may be had at the old hostelry, Webster's, three miles up the river, and guides and boats can be procured at Charlevoix. The various ways of reaching Charlevoix are pretty well known to shooting men. Lake steamers may be taken from Buffalo, Detroit, Cleveland and Chicago direct to Charlevoix, or by rail via Detroit, Lansing & Northern, or Grand Rapids & Indiana to Boyne Falls, thence by narrow-gauge railroad to Boyne City, thence by steamer on Pine Lake to Charlevoix. Refreshed by food and rest, and invigorated by the northern air, the fishermen can (having procured guide and boat) take the steamer, or the elegant passenger steamer, Clara Bell or Gazelle, for the river, or can procure a rig from the lively stable at hand and drive through the forest direct to Webster's.—H. L. I.

A LARGE ALLIGATOR GAY.—MORRIS, LA., June 26.—Your correspondent "Eclipsus" sends a very facile pen and some very good words, and a picture of a big fish, and tells him down on the weight of his fish. This morning Bill Hanna caught an alligator in the river at this place, which I think is the largest fish I have ever seen a record of as having been taken with hook and line. Bill procured a cotton line "about the size of a lead pencil," and had three ordinary catfish hooks lashed together with wire, so as to form a kind of "bob." Armed with this tackle he went down the river, and after a long time, he hooked a trout. At last, however, he succeeded in getting the fish near enough to the fish dock to enable the fisherman to brain him with an axe. The gar was hauled up to our office on a dory, where, having procured a small block and fall, he was hoisted up to a limb of a tree and weighed in the presence of a large number of deeply interested spectators. He weighed one hundred and seventy-six pounds, and measured six feet ten and a half inches in length.—OJACUITA.

WHITEFISH TAKE THE HOOK.—*Editor Forest and Stream:* Do whitefish bite or take the baited hook? Yes, they do. Many years ago I was storm-bound forty-eight hours at Copper Harbor (old Fort Wilkins, Lake Superior). One afternoon, when there was a heavy fog, I took a trout, knowing that there would be found there. I tried drop-fishing, baiting with fresh beef. Several times the hook was taken, though very quietly, but I got no fish that afternoon. After dark, Capt. Wm. Watts and myself tried it again, fishing on the bottom, over the bulwarks of the steamer. We caught six or eight fine whitefish in less than one hour's fishing. I was credibly informed that a few days before, when the fog was at the South end of the lake, the foot of the locks there. I cannot vouch for the truth of this, but I believe it. I used small pieces of fresh beef for bait, and fished on the bottom in Copper Harbor.—T. GARLICK (Bedford, O., June 26, 1888).

The canning of lobsters in the United States is entirely confined to Maine. The industry is almost wholly in the hands of canneries controlled by American capital. Without its canning interests the Maine lobster fishery would lose much of its prestige, as the majority of the lobsters canned are below the regulation size established by custom for the fresh market. The average size of the lobsters is about 10 inches, weighing less than ten or ten and a half inches in length, and those under this size are sold to the canneries. The canning industry was first started about 1840, at Eastport, Me., but several years elapsed before it was successfully introduced. In 1850 the value of the lobster catch was \$1,000,000, with a total capital of \$250,000, remaining open from about April 1 to August 1, and giving employment to about 650 lobstermen.

In the course of my misicultural life, I have been applied to many times by persons who wished to stock ponds with valuable fish, to know how to get rid of sunfish. They have often asked if an explosion could not be effective, and I have told them that it could, but that it would be of little other value than throwing them into the water, and that their pond would be barren of all such valuable fish-food as insect larvae and crustaceans, and that the remedy was as bad as the disease. All that then suggested itself was persistent netting, and this entails much labor and expense. Recently, however, I have again been asked to watch the nests, it occurred to me that the young crop could be effectually killed off by rowing around the ponds and

"TIME: time limit for the recent Savannah-class (trifurcated) matches was eight hours for all classes. Large-classes sailed 38 miles; third-class sailed 31 miles; for fourth-class sailed 27 miles. All this measuring the course straight, allowing no wind, no current, no tide, no wave, no Spt, and no wind. The 38-mile stand 41, 37 and 37 miles, all to be accomplished within one and the same time limit. The time limit was, therefore, for large-class sailboats, for third-class a speed of about 15 miles, and for fourth-class a speed of about 32 miles an hour. Estimating the rate at about 15 miles. That expected of the large-classes is reasonable, and perhaps the third class may be passed, but the speed of fourth-class hardly seems credible. The point can be put, however, so as to prevent a repetition of the fiasco of giving a prize to a boat. Spt. deadline in a match with equally good boat of Spt, lead-

The Wenonah is also of very large displacement, seventy-two tons, but she proved herself in the same race capable of propelling that large displacement through the water at a faster rate than the best light displacement yachts in America were capable of driving their small displacement with equally as large and larger sail areas in proportion to length or bulk.

The Wenonah also has lead on the keel, twenty-eight long tons,

THE first annual match of this new club was sailed in a cracking breeze from southeast over a course from club house, foot East 10th street, Harlem, to and around Gangway buoy and return. Distance, twenty-four miles. Reefs and bobbed jibs were in order with a few, but the majority risked whole sail. Time allowance was two minutes to the foot; prize to each winner and pennant for best time over course. Seventeen came to the start as follows:

Yet she proved herself  
speed and less detrim  
with inside ballast.

The Wenonah has no

**FOURTH CLASS MATCH, S. C. Y. C.—JUNE 23.**

"Corinthian matches. June 23, we give space to the following supplementary account. The contention this match has raised proves the necessity of providing accommodation enough for disinterested persons to follow all classes and obtain records which shall not be flavored with the prejudices of the owners compelling. We hope that our remarks in last issue on this head will bear fruit next year.

Half a mile above starting point Petrel found Glean about to cross. These being the only two which got wind enough to make even a semblance of fair racing, were pretty close aboard. Both crossed within a few seconds as Petrel closed up with a light breeze. Amazon followed them out west channel. Petrel had cruising rig and cruising light sails. Glean was heavily sparred for light weather, and brought large kites into play as opportunity offered. This was a great help to her all day. Petrel went through the water faster

cutter was luffed a second time. The topmast threatened to fall and was found the eye broken.

It is clear that the owner of the Glean should not suffer for want of an opportunity to give the public his view of looking at the Glean. It is raining in the Seewalden (Cöln) and the addition of the rain is founded upon testimony quite as good as that of the owner, and we have no alterations to make in our general conclusion. The owner's attitude of perfect indifference to its weak boat wins, or the finish, however, we could add no ground for our impression that the owner of the Glean won on time. We accept, in the instance, the owner's assurance that Glean was not a success. It is not a success, but it is a success. It should be added that Petrel had only cruising speed, a maker and small fibropast, and that as time was never able to get into the fray, leaving the owner to claim winning on the merits of his boat is a perfectly useless undertaking. This letter must be the last on the subject.

The third time Petrel was buffeted to go at a watch tackle on the shroud. Of course this gave Glean a long lead in the nice working wind then blowing. All this lost water was made up by Petrel before the Spit buoy was again reached. They rounded in close company. Wind then became palmy and the two boats, for a mile extra, were able to keep abreast of each other. Petrel, squaring away to the home run, for three miles they ran along. Petrel taking a slight lead. Glean then dodged east and west with the cutter in order to steal Petrel's wind by "covering." At close of race wind came stronger from astern. Glean got the wind first and Petrel came round in the lee. Glean was now in the lead and Petrel was unable to do so in going and enabling Glean to cross the finish a few feet ahead. The others in the class never got into the race after leaving the East Bank for want of wind.

GLEAM'S WIN.—JUNE 23.

*Editor Forced and Stream:*  
 It seems very unfortunate that any paper should be so biased by its predilections in favor of one type of boats over another and that the same paper should deliberately make positive false state-

## Editor Forest and St

It seems very unfortunate that any paper should be so biased by its predilections in favor of one type of boats over another and of different type of yachts, as to deliberately make positive false statements in regard to facts, and to make the same time alleging an entire absence of facts, as to the part of anyone in reference to the same. After to your statement in this week's issue in which you say "The Gleam, for instance, won in the fourth class, the only one which made the race within the time limit. Now no one pretends that the Gleam, 23ft., can beat such a goer as Petrel, 28ft., or Ariel, 27ft. 8in. headline, in fair sailing. Her honors were won by a fluke, yet no one knows how she came by them."

You are certainly free to entertain your own views in respect to matters of opinion, on the question of relative speeds of different water line lengths and of different boats, but when you misstate facts and in the same paragraph admit that your statements are made without any knowledge of the facts, you certainly place yourself in a position not very creditable to a respectable journal, or likely to lend to its authority on matters of fact, or opinion either.

As to the merits of the contest in the fourth class, in respect to which you are so free to state as facts what you admit you are, I am blissful ignorance of, I desire to inform you that your statement that the Glean won by a fluke, is untrue. That so far as the Gael is concerned she was lost sight of in the early part of the race; but as to the Petrel, she was close to the Glean on the way out at buoy 86, at buoy 86, at buoy 5, and at buoy 4, and she was in the lead at buoy 3, buoy 2, and buoy 1, together at buoy No. 9, and until the breeze came in, when sent her home, when they were not together any more.

las of the manning by amateurs of schooners and sloops of the first class. Positively the demands of the Clytie, Gracie, Fanny and Belmont absorbed no less than seventy Corinthians. The labor of working such large vessels is severe, and when day, if the practice be persisted in, we may hear of trouble, and some a rapidly freshening breeze, and a heavy squall, tempt taking in of kind, and an immediate overhaul of the reefing gear, which possibly no one on board has been practiced in handling.

A HARD-HEADED BUT SOFT-HANDED CORINTHIAN.

proun. Class C Atlantic V, C was sailed June 26 over club course around Split buoy and Scotland Light and back to Whiskey Point buoy. The wind from the north-northwest blew at 10 knots. Commodore Verniflye, sailed off the course as Judge's boat. Crocodile, John G. Pragne, got off at 1:59:43, and Wade, Dr. J., C. Haron, at 2:10:10. A strong wind from the north-northwest blew at 10 knots. The wind lifting Crocodile into a good lead over Lower Hospital Island, with Wave nearly three miles astern. Wave stood over into Gravesend light and crossed it at 2:28:17. Crocodile followed her and was surrounded by Crocodile at 4:37 and Wave at 5. Crocodile had to make a leg to weather Scotland Light, but Wave picked up for the mark and finished over at 4:43:35, just ahead of her. The pair led in the picking up at quite a lively rate. Inside Hook spinners were running out. Nearing Homer Beacon the wind began to fail, and Wave, being so close behind, was forced to give up. Crocodile, however, kept on. Crocodile now got her turn of luck, and came down upon the leader, and with a new wind and crossed at 10:30. Wave being late, Crocodile won the winner and took away the prize money subject to conditions.

**THE TERROR.**—Concerning the *Marjorie*, the *Harold's* correspondent writes from Harwich, England, as follows: "Mr. James Ashbury's schooner, the *Cambria*, which went to America some ten years ago, must be pretty well known to most American yachtsmen. She was at that time the crack English yacht, but things have wonderfully changed here since then, and the *Miranda*, which was built in 1870, proved herself so much faster than the *Cambria*, after a few matches with her, gave up racing altogether. The *Miranda* sailed in to-day's race, meeting the *Marjorie* for the first time, by which yacht she was beaten, as described, by six minutes and thirty seconds, without any allowance. The *Miranda*, after numerous contests, was found last month to give the *Cambria* from twelve to fifteen minutes in anything like a fair breeze over the usual English course for this class, say sixty miles. Now if the *Miranda* can beat the *Cambria* in thirteen minutes and the *Marjorie*, according to a fair and honest performance to-day over a course in which there was a large proportion of tacking and reaching, can beat the *Miranda* six minutes and a half, the *Marjorie* is accordingly some twenty minutes faster over a sixty-mile course than the *Cambria* was when she sailed in America."

**THE NEWS ABROAD.**—The victory of the keel cutter *Wenonah* over the centerboard sloops of the New York Y. C. in the annual regatta of that club on the 21st inst., shows that the American cup is in the hands of the English yachtsmen, whenever they choose to fight for it with one of their best racing cutters. The *Wenonah* was built last year from a design by John Harvey, a famous English naval architect, and is of the following dimensions: Length over all, 72 ft.; length on waterline 60 ft.; extreme breadth of beam, 11 ft.; draft of water, 10 ft. Her sails were made in England, and she was sailed by an English skipper and crew. The *Wenonah's* dimensions are scarcely up to the standard of modern English racers, and as she sailed her first race on the occasion, there are probably at least a dozen well-sensuenced cutters in England that could have given her a beating over the 38 mile course. *Helle-rille Intelligence.*

**NEW SLOOP.**—John Munn is building a deep sloop for Mr. John Dimond, of Brooklyn. Over 45 ft.; water line, 32 ft.; beam, 14 ft.; depth, 5 ft. Mr. Dimond was a great admirer of the skimming ship, and lost no opportunity to procure his faith. We are glad to find his new sloop with 3.5 depth in place of the old orthodox 1 ft.

**QUINCY Y. C.**—Third race was sailed off Great Hill, June 2d, in easterly wind with thick fog. J. G. Coffin, won in second class in 1:10:42, and J. H. Coffin, 1:11:04. The *Wenonah* sailed in 1:52:41 corrected time. Prizes were pennants, presented by Sigourney Butler. Next race second championship match, fixed for 3 P. M., July 12.

**ESTERBROOKER Y. C.**—Pennant matches for club yachts are to be sailed once a month, July, August and October. Pennants become property of yachts winning most races. First class comprises all cabin sloops, second class open yachts over 20 ft., third class open yachts under 20 ft., fourth class cat-rigged yachts over 30 ft., fifth class cat-rigged boats under 20 ft. and over 30 ft., sixth class, cat-rigged yachts under 30 ft. Course for first class from Port Morris club house around Tom buoy and return. For others around Port Schuyler buoy. Start prompt at 2 P. M.

**RIVET.**—The iron cutter *Rivet*, formerly of Kingston, Ont., will join Royal Canadian squadron this year. She was built by Simons, of Glasgow, in 1862, and sent out in sections to the lakes. She has now been bought by Hon. Edward Blake, and has been thoroughly overhauled and received ballast. *Rivet* is 100 ft. over all, and 30 ft. beam, so it will be seen she has quite modern proportions and certainly was ahead of her times when first built. She sailed for Niagara with the Toronto squadron, June 10.

**BEVERLY Y. C.**—Club book for the year shows 122 members and 109 yachts, being a larger proportion of yachts to members than any other club in America. The fleet is made up of four keel and four centerboard schooners, six keel and thirteen centerboard sloops, eleven cutters, two yawls one helter, fifty-eight motorboats, and one steamer. There are four keels among the catboats, seventy-third race on Saturday. Classes over 21, 17 and under 17 ft.

**PHOTOS.**—We have received from Rockwood, the photographer, No. 17 Union square, a fine assortment of instantaneous photographs taken during the recent great races. They represent individual vessels and interesting groups. Among them we note some of the schooners *Grayling*, *Atlantia*, *Thialfay*, *Montauk*, cutters *Redoubt* and *Peter*, sloops *Rover*, *Fanny*, *Rover*. The photos are well executed and handsomely mounted.

**TORONTO Y. C.**—The squadron sailed for Niagara June 3d, and attended a hop in the evening. Yachts in the fleet were: *Cutter Gunnevere*, Geo. Nicol, M. C. Brown, C. Marriott; *Salters*, H. Armstrong, W. Law, H. Parsons; *Cutter Rivet*, Capt. E. H. Blake, V. Armstrong, N. Moffatt and H. Norton; *Sloop Gyssie*, Capt. Townsend, C. M. Sutherland, A. Boulbee, R. Agnew and F. Dumbard; *Sloop Mischief*, P. Parkinson, D. Murray, F. Thomas; *Sloop Kesrel*, C. Townsend, J. George and A. Campbell.

**SALEM BAY Y. C.**—Prizes in recent race have been awarded to *Nirvana* in first class sloops, and to *Comus* in third class, fast failed to make the course.  
**KREL CAT.**—Lawley & Son, South Boston, have built a keel cat for Geo. Paine. Over all 100 ft., on water line 16 ft., iron on keel 900 pounds.

**NEW JERSEY Y. C.**—Will arrange a match open to all yachts under 35 ft., for Sept. 15. Regular club course, around Robin's Reef and buoy 13 in lower bay. Fixed ballast, limited crews. Classes for catamarans, yachts over and under 20 ft. Prizes, champion pennant and \$25 in each class.

**JEFFERISS Y. C.**—Second championship match was sailed off Joffres Point, East Boston, June 3d, in light easterly wind. Course, 6 miles. Only two starters, *Lizzie*, S. Porter, Jr., won in 1:29:52, corrected time, beating *Judith*, F. T. Pison, by 20. 158.

**CHICAGO Y. C.**—Sixty members are off on the annual cruise to Milwaukee. The fleet comprises schooners *Idler* and *Comet*; sloops *Corra*, *Wasp*, *Sardor*, *Ariel*, *Peter*, *Zephyr* and *Beatrice*; cutters *Larson*, *O. R.* and *Salter*, and steamer *Huntress*.

**HULL Y. C.**—Has placed large mooring for visiting yachts, and they are instructed not to occupy those of other vessels away from the club. The club has issued to members a twenty-page pamphlet giving fixtures and rules for the season.

**ROYAL CANADIAN Y. C.**—Schooner *Orion*, cutters *Alarm*, *Alben* and *Verve*, and other yachts of the club, are off on the annual cruise, sailing for the first time, then Charlotte and home, occupying three days.

**BOSTON CITY REGATTA.**—Judges for the public races are M. J. Kiley, chairman; C. F. Loring, Wm. Morris, Louis M. Clarke and Geo. A. Palmer. A full report appears in our next issue.

**JERSEY CITY Y. C.**—A match has been fixed for July 10, open to rats, for cup offered by Vice-Com. C. R. Browner Archer. Course around Robin's Reef buoy.

**EOLOS.**—The exact amount of load ballast on underside of keel of schooner *EOLOS*, Mr. Miles Wood, N. Y. Y. C., is thirteen tons.

**WANDERER.**—This schooner has been sold to Mr. Weld, of Boston, and is being overhauled before departure.

**VALKYR.**—Is having a new racing rig by Sawyer, of South street.

**PUBLISHER'S DEPARTMENT.**  
"We only part to meet again"—the miles of the extra line electric pens and other styles of Esterbrook's make. *Advt.*

"When cleanliness, prompt action and general therapeutic results are desired, Bessons' CAPSULE PAINERS are masters of the situation. They easily excel all other external remedies." So writes an eminent western physician. For local rheumatism, torpid liver, sciatica and bronchitis they have made a brilliant record, beyond all imitations. "Capsule" cut in each. All druggists. Price 25 cents. *Advt.*

# HUMPHREYS' HOMEOPATHIC VETERINARY SPECIFICS

FOR THE CURE OF ALL DISEASES OF HORSES, CATTLE, SHEEP, DOGS, AND PIGS. For Twenty Years Humphreys' Veterinary Specifics have been used by Farmers, Stock-Breeders, Horse & Cattle Dealers, and Menageries and others with perfect success.

- LIST OF SPECIFICS.**  
A. A. Cures Fever and Inflammation, Milk Fever, Slight Meningitis, Hog Cholera, 75c.  
B. B. Cures Pains in the Head, Stomach, 75c.

F. F. Cures Coughs or Gripes, Bellyache, 75c.  
G. G. Prevents Abortions, 75c.  
H. H. Cures all Urinary Diseases, 75c.  
I. I. Cures Eruptions, 75c.  
J. J. Cures all Diseases of Digestion, 75c.  
K. K. Venereal Cures (Old) Syphilis, Venereal Ulcers, 75c.  
L. L. Cures all Diseases of the Lungs, 75c.  
M. M. Cures all Diseases of the Lungs, 75c.  
N. N. Cures all Diseases of the Lungs, 75c.  
O. O. Cures all Diseases of the Lungs, 75c.  
P. P. Cures all Diseases of the Lungs, 75c.  
Q. Q. Cures all Diseases of the Lungs, 75c.  
R. R. Cures all Diseases of the Lungs, 75c.  
S. S. Cures all Diseases of the Lungs, 75c.  
T. T. Cures all Diseases of the Lungs, 75c.  
U. U. Cures all Diseases of the Lungs, 75c.  
V. V. Cures all Diseases of the Lungs, 75c.  
W. W. Cures all Diseases of the Lungs, 75c.  
X. X. Cures all Diseases of the Lungs, 75c.  
Y. Y. Cures all Diseases of the Lungs, 75c.  
Z. Z. Cures all Diseases of the Lungs, 75c.

These Veterinary Cases are sent free to any Veterinarian on receipt of the price, or any order for Veterinary Medicine to the amount of \$2.00 or more. Humphreys' Veterinary Manual (\$2.00) sent by mail on receipt of the price, \$2.00. *Advt.*

2500 Pamphlets sent free on application. HUMPHREYS' HOMEOPATHIC MED. CO. 109 Fulton Street, New York.

# "MIST" COLOR LEADERS.

Being consumers of nearly three-fourths of the total amount of silk worm gut imported in this country, and having in Murcia, Spain, increased our facilities for the manufacture of silk worm gut, we are enabled to secure a selection of material for our leaders beyond what even we have ever had. The leader being one of the most important articles in an angler's outfit, we have long given particular attention not only to the material of which it is composed, but also to the manner of making or tying it. All of our leaders have a place every three feet, made quadruple by looping, so that the flies can be easily adjusted and will not wear the leader unnecessarily. All of our leaders are "Mist Color." Every envelope contains one dozen leaders; has our name and trade mark on it; states the length and quality of the leaders in it.

Orders received from persons residing in cities in which the dealers keep a full line of our goods in stock will not be filled at any price.

# ABBEY & IMBRIE,

Manufacturers of every description of

# Fine Fishing Tackle,

# AMERICAN Kennel Register.

A monthly record of kennel events for the information and guidance of breeders, exhibitors and owners of all breeds of dogs.

Its leading feature is the "Pedigree Register," of sporting and non-sporting dogs, which makes it the only complete Stud Book issued in America. A register number is given to each dog, and an index will be compiled at the close of each annual volume, thus forming a permanent work of reference. The pedigree registration fee is twenty-five cents. The first two numbers of the Register contained the pedigrees of 138 dogs.

Departments are also provided for the registration of stud visits, dogs at stud, births, sales and transfers, dogs at sale, and deaths.

Prize lists of all the American shows will be given, with descriptions of the principal winners and dogs exhibited; also prize lists of important shows abroad. This department will include a record of field trials. The first two numbers of the Register contain prize lists of Washington, Ottawa and Pittsburgh shows.

The publication day is the fifth day of each month; and nothing can be received for publication later than the first day of the month. All matters intended for publication should be in the hands of the editor at the earliest practicable date. Entry blanks for each department will be furnished free on receipt of stamped addressed envelope.

TERMS.—Isued by yearly subscription only. The subscription price is one dollar per year. Make drafts and money orders payable to the Forest and Stream Publishing Company. Address, AMERICAN KENNEL REGISTER, P. O. Box 2,882, New York City.

## THE FOLLETT PATENT Trout and Bass Reel

The Lightest, Cheapest and Most Durable Metal Reel ever offered to the Anglers of this Country.

SUITABLE FOR TROUT, BLACK BASS AND PICKEREL FISHING.

PRICE, \$1.50 EACH.  
LIBERAL DISCOUNT TO THE TRADE.

Sample Reels furnished if they cannot be purchased from dealers in your place.

W. & J. M. AIKENHEAD,  
55 Front St., Rochester, N. Y.

[Extracted from FOREST AND STREAM, July 7, 1883, p. 44.]

This flight so nearly resembles the aerial motion of birds that the Clay Pigeons afford excellent practice for wing shooting. We commend all sportsmen to test its merits.

## Schwatka's Search.

Shooting in the Arctic in quest of the FRANKLIN RECORDS.

—BY—

ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, and kindred subjects, than is contained in all other American publications put together.

TEN YEARS.—With the issue of July 26, the FOREST AND STREAM will have completed its first ten years of publication.

## JAPANESE PHEASANTS IN CALIFORNIA.

IN our issue of November 3, 1881, was published a letter from Lieut. W. W. Folger, of the Navy, then stationed at Shanghai, in which letter he told us of Consul-General Denny's willingness to procure Japanese pheasants for importation into this country. An appeal was made to sportsmen's associations to avail themselves of this kind offer by making provision for receiving and caring for the birds. Whether because discouraged by the fruitless migratory quail importation or from a lack of public spirit, game societies appear to have given no attention to the subject, save the California State Sportsmen's Association.

Something over a year ago that society received from Japan nine pheasants—they being all the survivors of a lot of seventy-five birds shipped. The pheasants were put in charge of a gentleman at San Mateo, and carefully provided for in a house specially constructed for them. We learn from the *Pacific Life* that the birds have thrived. Eighteen young have been hatched and are now a month old, and sixty eggs were, at the time of writing, yet to be heard from. The association appears to have demonstrated that it is practicable to breed the birds in this country, and although it is as yet too early to predict the final outcome of their enterprise, it appears highly probable that the pheasant can be successfully acclimated.

The so-called English pheasant has been introduced on this side of the continent, one instance being that of Mr. Lorillard's farm in New Jersey, where the bird furnishes sport after the regular English style.

If the individuals and clubs, who have a great deal to say and little to do in protecting game, would direct their intelli-

gent efforts to following these two examples of public and private enterprise, they would accomplish much more than can ever be attained by violent denunciations of "pot-hunters" and "monopolists." Our State associations have abundant means and every opportunity to increase the supply of native game and to introduce foreign game, if they could only be induced to give some attention to the matter. If these societies had begun ten years ago, to labor in a systematic way for this increase, they would have had a great deal to show for it to-day. The next best thing is to begin now.

## THE BOTTLE JOKE.

ONE of the harmless institutions of the day is a Funny Paragraphers' You-Tickle-Me-And-I'll-Tickle-You Association. The membership is composed of the professionally funny men of a half dozen professionally funny papers. The duties of the members are simple; each is bound by a cast-iron oath to copy the jokes manufactured by the others, and there his obligations end. Each member of the order makes an annual pilgrimage to the offices of the rest; on which occasions Brother Bill devotes a half column of gush to lauding the visiting Brother Bob's brain, and Brother Bob in return pays in kind by communicating to his own paper an equal number of lines about Brother Bill's capacious intellect. Thus each practices the golden rule and blows hard the other's horn, even as he would that the other should blow his horn.

A staple topic for these paragraphers and mutual admirations at this season of the year is angling. They generally let themselves loose on the topic of the city angler and the "barefoot boy;" or they try a big "fish story;" or (and for some not wholly occult reason this is their favorite theme) they find their inspiration in the "whisky bottle." It would be an interesting subject of inquiry to determine which of these themes is the most venerable as a joke, or in the paragraphers' hands most dismal. The grandson of the original "barefoot boy" was killed by a British bullet at Ticonderoga; the greatest "fish story" extant is some thousands of years old; and the whisky joke was current in Ireland when Raleigh and Spenser were fighting the Spanish invaders there, and was even then thought by connoisseurs to be considerably mellowed by age.

The latest distillation of this spirituous joke is a product of Iowa. We find it credited by the other funny paragraphers to "Bob" Burdette, and it is therefore of the Burlington *Hawkeye* brand. It reads:

Did we not go fishing it would not be summer. 'Conversely, if it were not summer we would not go fishing.

"We are going fishing next week," said Mr. Oldboy, "and I want to be sure we've got all our things together."

"Got a tent?" asked his partner.

"Yes, I've got a tent."

"And a boat?"

"Yes; that's engaged."

"Whisky?"

"Lots of it."

"Some pilot biscuit?"

"Yes, a whole box."

"Five or six dozen of beer?"

"Yes."

"Cigars?"

"Hundreds of 'em."

"Plenty of whisky?"

"Yes."

"Ham and canned meats?"

"Yes."

"A good lot of beer?"

"Yes."

"You'll want some ice."

"I have that, and I have lots of canned goods, plenty of beer and cigars, no end of whisky and bread, and everything I can possibly think of, and yet it seems to me I've left something out."

"Got your tackle, haven't you?"

"By George!" shouted Mr. Oldboy, "you've hit it. That's just it—fish hooks and lines, we'll need some of them, won't we? I knew I had forgotten something."

I do not know why it is, but for some reason nearly every fishing party carries with it a lot of hooks and lines which are only good to tangle up and catch in the drooping branches of the whispering trees.

Now, as we have said, these paragraphers and their little jokes, even their whisky jokes, are for the most part harmless. So is a drop of water. But it is the iteration that tells. The drop of water when it falls at regular intervals upon the head of the victim becomes the most refined torture and drives the sufferer into a maniacal frenzy. The angler's whisky is passed around so frequently and so persistently by the funny men that respectable gentlemen, who go into the woods for recreation, are losing their patience. They are tired of having the bottle continually fired at their heads by these muddled prunsters. We know some anglers—very worthy, law-abiding citizens they are, too—who would like nothing better than to impale one of these sland-

erous jokers on their hook, souse him into a cool stream of pure trout water and "play" him there until the whisky should be well washed out of his gigantic brain aforesaid. Again it has been plotted to invite him out on a shooting trip, when on a preconcerted signal all hands should accidentally fill him full of No. 8 shot. Less heroic than the water cure or the administering of leaden pills, and not so provocative of black lines in the bereaved funny paper, is the method proposed by others, namely to entice the whisky joker into the forest and there compel him to inhale the odor of balsam boughs and the woody fragrance until the fumes of the still are evaporated; but, however differing in methods proposed, one and all are agreed that the angler's whisky joke fiend should be squelched, even if it be necessary to disrupt and disband the whole mutual-tickling half dozen of them.

The funny men are behind the times; this is the year of grace 1883, not 1388. If they ever go angling themselves they ought to know, as we now beg leave to tell them, that it is not all of fishing, nor indeed any part of it whatever, to get gloriously drunk. An angling trip is not, nowadays at least, an excuse to swill whisky or beer. The professional and business men, clerks, artisans and mechanics who annually by hundreds and thousands go into the woods with fly-rod or bait-hook do not go there to guzzle firewater. These dimly humorous imputations that anglers think more of their jugs and kegs than of their tackle are standing insults—none the less obnoxious because flat, stale and unprofitable—to all pleasure tourists who in the God-made forests, as at home, are gentlemen and men, not beasts.

When the FOREST AND STREAM's machinery becomes so nicely adjusted that its editors can "get away" for a fortnight in the woods, nothing would please us better than to take along a trio of the whisky paragraphers to show them how to angle successfully without swilling demijohns of grog. Nor would it be an altogether thankless task to teach the paragrapher how to shoot without loading himself to the muzzle with rum.

And yet the community as a rule understands these things better than does the funny man. There is no need then of enlightening him save for his own individual benefit and that of his professional brethren; and the beauty of it is that if we can convert one "Brother Bob" or "Brother Bill" he will, on his annual mutual-admiration tour among his fellows, help to convert them also, until the whole lump shall be leavened.

HENRY BERGH AND ANGLING.—The story about Mr. Henry Bergh's objection to President Arthur because of the latter's angling proclivities turns out to be a fiction, or in short, a lie, concocted by the fertile brain of that mischievous being, a "New York correspondent." The denial from Mr. Bergh, with its good-natured but nevertheless telling sarcasm, published in our last issue, has sufficiently vindicated that gentleman from the silly fabrications of the said gossip-loving penny-a-liner. Mr. Bergh might have gone further had he thought it worth while, and have corrected the distorted personal portrait of himself as drawn by the same imaginative and more or less slanderous correspondent, who in all probability never heard Mr. Bergh say anything about angling or anything else, nor in short, ever saw him.

A SUMMER HOME FOR PETS.—When city people leave their homes for a summer in the country or by the seaside it sometimes becomes a perplexing problem how they shall provide for their house pets during this absence. In response to the "long felt want" of a caravanserai where owners may leave their dogs and cats and birds, Miss Ellen M. Gifford, of Boston, has established a "home" for the purpose in that city. The weekly rates of entertainment are seventy-five cents for small dogs, fifty cents for cats and thirty-five cents for birds. The institution ought to be a paying one. We shall probably now hear less about the heartlessness of Boston people who leave their cats to die.

ANGLING INCIDENTS.—A man out West in casting his hook caught it in one of his eyes, which was ruined. A man who was fishing from a Hoboken dock lost his hat overboard; according to one account he was drowned in trying to recover it; another says a bystander was the unfortunate victim; if both accounts are true, both men were drowned. A fisherman near the Highlands, the other day, fished up the body of a drowned man. These cheerful notes might be multiplied, were the catalogue pertinent; but we have no desire to dampen the ardor of any enthusiastic angler.

## THE WIMBLEDON TEAM.

THE American team are now on the Wimbledon Common, and within a fortnight the match will have become *un fait accompli*. The reports so far from the other side show that the men are in good condition, and the few scores made on several occasions show that the men have caught the secret of the air, light, etc., and are able to roll the records close to the highest possible.

The fears that the team of visitors were to sit by, a mere idle squad, during the Wimbledon meeting, are not to be realized, if the meagre telegrams received speak aright. In place of allowing the rule prohibiting screw wind-gauges on the rear sight of military breech-loaders to be set aside in favor of the American shooters, and others like them, who prefer a modern to an ancient style of firearm, the Council have issued to the team complimentary score tickets to the several M. B. L. matches.

This may accomplish all that the riflemen and their friends here wished on behalf of the team—a chance to practice freely and fully during the fortnight of the Wimbledon meeting, and if so, then the team will go into the match as fully prepared for the struggle as it was possible for them to be under the circumstances. Still, it had been better if this concession or courtesy had been granted earlier in the season, and the vast amount of uncertainty which surrounded the reception of the team abroad had been avoided. It is but a roundabout way at best of reaching a good result, and it would have been far better had the Council turned fairly about on the screw gauge question and confessed by an amendment to the rule that the screw is a part of a serviceable weapon and that in using it the American team is not guilty of employing a mere device for securing higher scores, fit only for range use, but not to be recommended for those who desire only a soldier's weapon.

The work of the team will be watched with interest during the next few days. Already members have been the center of a great deal of attention on the part of their fellow-marksmen in Great Britain. Fêtes and dinners of various sorts are talked of, but to all the reply is made that a previous engagement will prevent acceptance until after the match has been fought. No date has been fixed for the return of the team, but win or lose, Col. Howard is determined to keep his men in good condition until after the meeting of the teams at the end of next week. He has placed them in lodgings away from the temptations of Wimbledon camp, and when the afternoon for the opening range comes, we hope to hear that the men stepped to the shooting point with every factor of possible error as far as may be carefully removed.

THE OLD "BEAR MARKET."—The Washington Market, in this city, is to be rebuilt; and *apropos* of the change the *Evening Post* gives some interesting particulars of its early history. At the time of its establishment, it was too far away from the thickly settled parts of the town to prosper, and the dealers who had taken stands there soon deserted them. "In this uncommercial condition of the new market a fortuitous event occurred. One day a great fat bear came out of the New Jersey woods and started to swim the Hudson for a visit to New York. When near the shore on this side he was observed by a young butcher named Jacob Finck, who had kept his almost deserted stand. Collecting a few assistants, Finck boarded a small boat and prepared to receive Bruin in proper form. After a hard contest the butcher slew the bear and bore his carcass in triumph to his market stall. The fame of the encounter spread through the city; people came from all parts to see the dead beast, and the butcher improved the occasion to let it be known that the carcass was to be dressed and offered for sale, in parcels to suit, from his blocks. The meat was readily and profitably disposed of, and the place where it was sold came quickly to be known, in the absence of any other name, as the market where the bear's meat was sold. Finck, with true business sagacity, procured other bears from any source they could be obtained, which he sold exclusively from this market, and it thereby acquired the permanent name of the Bear Market," which it held until, after the Revolution, its patriotic dealers gave it the name it now retains.

"SLATHERS" is the only word that will express it, and it is therefore just the term used by an Oregon paper to signify the amount of game in that favored land. For the sake of certain titled gentlemen from abroad, who with extensive armaments of express rifles, explosive bullets and bombshells, are scouring the Western game countries, we repeat the weird tale which comes to us of a valley near the headwaters of an Oregon River, where the "cougars have for years prevented the deer or two keeping watch at the mouth to the herd from escaping. Whenever a cougar of the band gets hungry he walks into the little valley, like a butcher into a corral, and picks out the fattest deer he sees, and dines off his carcass. When the herd of deer grows small the cougars hold a "rodeo," and collect a few score more and drive them into the valley. Now all a man has to do is to kill off the cougars, and then go for the deer, and there is just fun alive." If the artillery trains of the gore-thirsty band alluded to could only be diverted from the antelope and buffalo to the cougars, it were a consummation on the attainment of which true sportsmen might fall upon each other's necks and weep for joy.

"THE WILD WEST."—Messrs. Carver and Bogardus have turned philanthropists, and are now "starring" for the benefit of the small boy who goes to the circus, and his grandfather who goes to take care of him. The aggregation of wonders under their canvas is something to make the proprietors of the "only greatest show on earth" green with envy. Here is a list in cold type of the attractions, the show being under the direction of "Buffalo Bill, the World-famed Prince of the Plains; the Hero of Thousand Thrilling Scenes; the Most Romantic Character in American History, and Dr. W. F. Carver, known as the 'Evil Spirit of the Plains,' whose appalling skill with the Rifle has won for him a place among the Remarkable Productions of the Century." "One Hundred Indian Horses; a Herd of Wild Buffalo; a Herd of Mountain Elk; a Herd of Wild Texas Steers; a Camp of Sixty Indians; a Company of Famous Scouts; a Band of Genuine Cowboys; a Group of Genuine Mexicans; the Original Deadwood Stage Coach; Bogardus, the American Shotgun Champion; Major North, the White Chief of the Pawnees; Tom Wilson, Hero of the Deadwood Massacre; Buck Taylor, the Cowboy King; Jim Lawson, the Wonderful Lassoist; the Chiefs Standing Buffalo and Little Sitting Bull; John Nelson and his Indian Family; the Comical Mexican Burros; the Only Baby Buffalo in Captivity; the Squaw and her Pappoose; the Louchy Wagon Train; the Phantom of the Prairies."

A REQUEST FOR WORDS.—The Century Company of this city are preparing an American edition of the Imperial Dictionary, which they purpose to make the most complete work of the kind in existence. The editor of this journal, having undertaken the revision of the terms relating to angling, shooting, and kindred topics, would be grateful for the co-operation of those persons who may favor him with terms in local use.

THE GREELEY RELIEF EXPEDITION.—At four o'clock P. M. on Friday, June 29, the vessels for the relief of the Greeley party left St. Johns, N. F., for Lady Franklin Bay or the nearest accessible point to it. The Proteus was the first to start and was soon followed by the Yantic. The wind was fair for them from the southwest, and the squadron moved off under most favorable circumstances.

THE DANVER MINING EXPOSITION will be opened July 17. Visitors to Colorado this summer may combine a visit to the exposition with a visit to the trout bonanza streams of the mountains.

THE FOURTH OF JULY, as will be learned from our ride and trap news columns, was a great day for targets and clay pigeons.

## The Sportsman Courier.

## ON THE VIRGINIA SHORE.

JUST a little to the southward of a line between Old Point and Cape Henry, about six miles from the former and twelve from the latter, with both in sight on a clear day, there is a very pleasant resort for the summer stayers in Norfolk, Portsmouth and vicinity. Reached by a half-hour's pleasant ride in open excursion cars, it gives as we emerge from the woodland a good view of the ocean, and with the wind in any of the quadrants, north of west or east, a breath of its salt air, a very welcome breath to succor those impregnated with the many odors due to combinations of great quantities of Africans, truck, imperfect drainage and sewerage, hot sun, chloride of lime and other disinfectants which are liberally used in the main streets, and I wish I could say the back alleys, also.

The resort is appropriately named Ocean View, and every evening that the thunder storms do not prevent, the place is crowded from 6 to 8 P. M., or later, as there is one later train.

Ocean View has several advantages over its rival, Old Point. People can go and return several times per day at an expense of not necessarily over thirty cents; while, except upon occasional excursions, a trip to Old Point includes supper, lodging and breakfast at Higgen's, when croakers do duty for spots, at one dollar per meal, said croakers being a drug in the market at five cents per dozen, the spots ranging from twenty-five to seventy-five cents; and the spots are served up as "hogfish," which are quoted at treble the price. Thus a trip to Old Point is nearly ten times as expensive, and Ocean View reaps the harvest of people of moderate means, who prefer sleeping at home to temporary lodging at a hotel.

Old Point has the Fortress, the military band and the gay uniforms, and is a most delightful resort. But Ocean View is not without its charms; the beach is clean, bathing facilities excellent—better than at Old Point, if the beach and surf are considered.

There is a comfortable hotel, with spacious verandas facing the sea, a band stand, a dainty pavilion, restaurant, bar, and good attendance. Last but not least to me, there is good fishing very near by; and if the hotel, which furnishes boats and boatmen, would but recognize the fact that as the good fishing depends upon the right tide (last of ebb and young flood), and that this phenomenon is bound to occur very often during the extreme heat of the day, and that when this is the case the most ardent fishermen will find a dozen times before they will hire a boat once—and that the more he thinks the less chance there is of his hiring one at all—and that (to put it briefly) a boat without an awning is at such times a delusion and a snare, a pain producer and a joy destroyer—and would in consequence proceed to fit out said boats in more comfortable shape, then this letter is not written in vain, and "mine host" Kennedy will gather in increased store of dollars, trade dollars, etc. From one hundred to a thousand yards from the beach there are many rocky patches, and here and there the sub-

merged timbers of wrecks or casks, furnish resort for the sheephead, while over the rocks must swim a countless host of fish of many varieties.

Leaving Norfolk one evening at 5:30 with a companion, I left the beach at 6:15, and at 8 P. M., again landed to catch the 8:20 train up, and a preliminary sandwich. During the interval we had, besides the row to and from the fishing patch, caught six or seven dozen fish, ranging from six ounces up to a two-pounder; and I lost a good bit of my money; once a good-sized bluefish, which scooted off with the fifty yards on my side, and then without pausing continued to scoot regardless of my feelings; and again when I hitched on to what at first I supposed to be a rock, but which while I was worrying at it, coolly got under way and shifted berth about six or eight yards in a slow deliberate style, that pronounced its character to William Henry (our boatman) as a turtle.

These two fish I didn't catch, and, as usual, in such matters, they were the biggest of our day's work.

We did catch croakers, "black wills" (a sort of perch) perch, spot, trout, roundhead, bluefish and hogfish. Only two of the latter, for it is comparatively rare, and to this fact more than to any inherent virtue, owes its proud pre-eminence in price, for I'll defy any man, not thoroughly familiar with the Virginia fish, to tell which is which, when I brought in a contact with a well-colored, platter full of boys and hogfish. I cannot, and I've tried a dozen times, guessing wrong quite as often as right. So, although not quite the fair thing to sell two-cent spot for a ten-cent hogfish, it's not quite so bad as to try to pass off croakers as either. The croaker is to a fisherman here what the chub is to a trout fisherman, or the cunner to a tautog, and has hardly a marketable value. Of our fish, at least three-quarters were croakers.

They are a very fair table fish, and when slightly cooked can hardly be distinguished from the less plentiful, and I like them better than either the roundhead or trout, especially as material for a chowder.

I wonder if the coming process would not prove a very good way of preparing trout, bass, or other fresh-water fish? If we could make the spots open, remove the backbones, sprinkle a little salt; expose to sun, inside up, for about fifteen to twenty minutes, and it is good for two days.

Our bluefish were about half-pounders; the spots ranged from six to eight ounces; croakers ditto; trout and roundheads up to two pounds. After a little practice we could tell pretty well the fish that was biting by his method. Genest of course the spots and bass, just a minnow with; the croakers bit severely, pulled for all they were worth, and were quite gawky; the trout were lively, but not so much so; when occasionally we felt a slight nibble, and on pulling in a heavy dead weight, it meant crab, of which "little red fish that walks backward" we got lots.

The bluefish was the gamiest of all. He didn't wait as did all of the others for the bait to nearly reach bottom; anywhere from the surface to a yard under he would bite.

The "trout" puzzles me. In general appearance it strongly resembles a real trout, both in shape and markings. But lacking the second dorsal, peculiar to the salmon family, it is evidently not a member.

The few spots where sheephead can be procured are reserved for those who are willing to tip the boatmen, who depend largely upon said tips for their income; and those of them who fail to fairly the duties expected of them fully earn their money.

The boats are owned and rented by the hotel, and a ticket costing fifty cents entitles a person to boat, man, gear and bait.

I don't know how much can be gotten for the fifty cents; parties of which I have been one have always fished liberally; and we had all the fishing we wanted.

The baits used are peeler crabs, soft crabs, clams and hard crabs, valuable in the order given. Although it is understood that everything is furnished, one is much surer of good fishing by taking one's own gear, and carrying down a few peeler crabs or clams; the former are hard to get, the latter abundant and cheap. Unless you carry your own rod and gear, that provided may not suit, as it is of the coarsest sort.

Take it all in all, a run down to Ocean View pays. PISCICO.

JULY, 1898.

[We presume that the "trout" is the fish known as weakfish in New York. There are two species, the Southern form is black-spotted.]

## A STORY OF WAR TIMES.

SEENING nothing of late from our old army friends who were the "blue and the gray" in our late family differ ences, I give you the outlines of a stirring incident that took place while the writer was stationed at Goodrich's Landing, La., during the summer of 1863.

While the siege of Vicksburg was progressing, and in fact after its termination, the darkies, in pairs, in squads and in droves, poured into our camp for protection, and formed a motley crowd of men, women and children several thousands in number. The able-bodied young men were enlisted into the several negro regiments then forming at that place. All these people had to be fed from our post commissary on the regular army rations, and the food told with fatal effect on these helpless creatures, who had been accustomed to nothing but corn meal and fat bacon; they were prostrated by hundreds and died by scores daily. The fatality was not confined to "Africa," as we designated the contraband camp, but invaded the colored regiments, until the hospital was full and the levee in front of the quartermaster's depot one vast graveyard, alarming in the extreme. Our doctor, our medical purveyor, and his able assistants, had exhausted their skill to lessen the fearful death rate, but had utterly failed; not for the want of skill on their part, but owing to their want of knowledge of the Southern negro, and his former mode of life.

About the first of September the matter became so serious that the General called a council of his staff and field officers to get their views, and if possible to devise some change for the better.

After a two hours' highly scientific discussion by the medical staff on the causes, effects and cures of acute and chronic dysentery, which was amusing in the extreme, considering their lack of practical success in arresting its fatal effects; and the General, observing a broad grin on my features, remarked, "Well, Quartermaster, you have said nothing; but us here, we have said a good deal."

Remarked, "Why, Bruce, this is not a question of medicine; it is one of diet. Return to plantation fare, and my word for it all will be well. Corn and bacon are the things

to feed the colored regiments on. Stop your rations of flour and fresh meat and you will have no use for drugs."

This settled the problem, the council was dismissed, and all returned to routine duty.

The next morning, while driving Sergeant Charles Hatten, our chief of land transportation, some instructions, when an orderly rode up, handing me the following order:

"HEADQUARTERS, 10th REG'T, ETC.

"The quartermaster will procure by heading and delivery duty to the post commissary, forty wagon loads of corn; and he shall make requisition on the assistant quartermaster for troops as he may deem necessary for protection and fatigue duty."

"J. P. HAWKINS, Brie. Genl."

I read it and handed it to Charley. It was a surprise to both of us, for at that time the whole country between the post and the Texas was ruled by Harrison's cavalry, a reckless, daring set of men, led by their brave, enterprising colonel, who was always watching for a brush with our men.

While discussing the merits of the order, and the probability of carrying it into effect, an old darkey who lived on an adjacent plantation five or six miles southwest of camp, came shuffling, but in hand, with his usual salutation: "Morning, Massa Cap'n." Forgetting the order for a moment, I queried, "Any deer or turkey in the cane-brake, Nels?" "No deer," but some turkey, saw them last evening west of the place." This news stirred up the huntsman in me, and turning to Hatten I said: "Charley, let's have a hunt, and perhaps we will find some corn on the trip. It was soon settled that we two should start early next morning, and we went about our preparations, brushing up our Sharpe carbines, that we had trained to close shooting, each taking a package of ten cartridges, and providing one day's rations cooked ready.

Long before the sun rose on the following morning we were far beyond the vedettes, cantering on our way to Nelson's place. We found the old man up; he pointed out the clump of woods where he had seen the turkeys, and the shot was soon in the air. We did not find them. We searched for hours through the woods, the cane-brake, around the fences, but no turkey was there. It was ten o'clock, and we had turned our horses campward, when Charley saw the flock about half a mile on our right scratching in the edge of the field. We, by careful driving, stole up on them, and stopping to shoot, discovered our carbines were yet empty. To open my package and load was the work of a moment, when Charley's remarking, "No time to lose." Not waiting to lose time, I handed him five of my cartridges; we took deliberate aim, fired, and found one dead gopher. The flock made for the brake, we in hot pursuit, over fallen logs, cane ten feet high, with thickets of vines through which we had to cut our way with our pocket-knives. The chase was a severe one, but we succeeded in planting two more shots, killing a large fat hen. By this time the sun was pouring down on us, and with terrible effect upon our panting horses; but we determined to have one more shot, and followed the fleeing game, which had taken flight across a large plantation. Spurring our horses we came in sight of the turkeys, which had kept together and were then huddled with their wings extended, panting under a wide-spreading tree at the far side of the field. Dismounting, we crept on our hands, and getting within a hundred and fifty yards, fired, killing nothing, however; for when we reached the tree we saw the last of the flock across a wide and deep lagoon which completely barred our way.

The hunt being over, we took reckoning, judging we were ten or twelve miles from camp, in the midst of an unknown country, and two rounds of ammunition in our pockets. On examination we found we had been hunting domestic turkeys, which had reverted to a wild state. The country being abandoned the plantations and mills left alone, took to the woods, and we went on our approach.

Discovering the plantation buildings a mile distant, we walked toward them leading our horses, and eating a check as we went. We advanced to the residence without hesitation; hitching to the horse rack, we tried the front gate, which was fastened—nailed fast. The yard in front of the house was a thicket of rosebushes, flowers, vines, filices, a hundred different kinds of annuals, all in full bloom, filling the air with a perfume of delicate and delicious odors, intoxicating the senses; while the walks and paths were choked up with tall, coarse weeds, showing that no fostering care had been bestowed on the garden that season. Springing over the gate, we mounted the steps, found the door locked, and windows barred by shutters. Going to the back door, to our surprise we found it unlocked. Entering we found every room fully furnished, showing taste, and with well-reckoned furniture, the finest of carpets, easy chairs, settees, oil paintings on the walls; a piano, flanked by a stand of select music, stood silent on one side. Opening the shutters we surveyed the scene. In one corner stood a stack of *De Boer's Revue*, while on the luxuriant sofa, face down, lay one of the last numbers open as if just read.

I opened the piano and touched the silent keys; the sweetest sound started up. Sitting down, I sang, "Auld Laurie," which awakened sweet and tender memories of scenes long past in dear old Scotland. Then I played "Home, Sweet Home." How sad, how touching the thoughts started into life by his heart-searching notes. Then I sang to its bold accompaniment, Campbell's "Soldier's Dream." The last notes had scarcely died away when I sprang up, closed the beautiful instrument, shut the blinds, and told Charley we were drifting in every note of the music. "This will not do," Harrison may be about." We passed through the hall, and seeing a door ajar, entered. It was a young lady's bedroom, with a large downy bed covered with dust, a wardrobe with a number of dresses and garments on the hooks, and a dressing stand. We both felt that we were trespassing, and withdrew, closing the door, and left all as we found it, silent, sad, alone; bearing every mark the imprint of war's fearful desolation.

Mounting our horses we passed on to the quarters. There we found everything in disorder, showing plainly that the flight had been made in haste, without thought as to the mode of departure. Passing on to the ginhouse and stables, we found plows, cultivators, hoes, baskets and tools scattered about in the greatest confusion, and to our surprise and pleasure, every building full to the top of corn in the shock, stored, packed and piled in every corner; also a variety of rail pens, full to their tops. Thus we had found turkey and corn, and as the boys say, "felt good."

I dismounted, handed my bridle to Charley, and examined the corn, found it all sound and in the best of order, and had returned to my horse and placed my foot in the stirrup, when Charley said, "What is that over in the stock

field? I have been watching it but cannot make it out." I had mentioned while he was speaking, and looking in the direction pointed out noticed a horse pass an open space in the tall corn-stalks, and close after it a man leading a second horse.

"Charley, we are trapped," was my answer; and wheeling my horse to the left passing round the stables, I saw a road flanked on both sides by broad ditches, running, as I supposed, east toward the river. At this moment a shot rang out, clear and sharp, and to my dismay about fifty men mounted their horses, half on our right, half on our left, forming a circle of expectant drawing in on the road before us. The two troopers that we saw were on our right and considerably in advance of their followers, while those on the left were closer together, and about two hundred yards from the road. No time for thought: I touched Black Tom with the spur; he knew its meaning and fairly flew over the hard road, while the two troopers on our right were closing in on us, and threatening to bar our way. When within about one hundred yards of us, counting tearing through the dead corn-stalks, we saw them raise their guns, the leader emptying two barrels at us. The report was followed by a shower of spent buckshot, which maddened our horses but did no damage. The second one, dropping his bridle to shoot, relieving his horse from the pressure of the hit, it staggered and fell, throwing the rider in a half circle over its head, when both barrels were discharged in the hit. Charley was by my side in a moment, and said, "We will have killed that fellow." Without answering, I fired at him, but it missed. Charley then stopped his horse, fired, and the noble animal that was preparing to spring the ditch in front of us, reared and fell dead on its brink, and at the same time disabling his rider. When he fell Charley pulled off his hat, waved it over his head, and yelled at the top of his voice, in which I joined most heartily.

Now it was a race, with fifty shotguns behind us to push us on. Our horses were good, and I did not easily out distance our pursuers. The race was kept up for four or five miles, during which time we had passed through a skirt of timber.

We gradually slackened our pace, chatting and laughing at our narrow escape, and rejoicing at the fact that we each had one cartridge left, when, without the least warning, "crack" and "zip" came a bullet right between us and very close. We touched our horses with the spur at the same instant, and looked at each other. "Zip," came another messenger of death. Charley said, "Charley that is no shotgun." Glancing over my shoulder, I saw two new, fresh troopers coming after us at the top of their speed, galloping at every leap, the leader, an officer, about forty yards in advance of his comrades, and about a hundred from us, shooting with deliberation at short intervals; while the whole troop was scattered along the road to the woods.

"Charley, they will get us," I said. "No sir," was his answer. I drew rein, wheeled, fired, and was answered by a shot that shattered the pommel of his saddle. My turn had come; our safety depended on my shot, which was our last. Staking all in my nerve, I drew rein, jumped from the saddle, dropped on one knee, took deliberate aim and fired. The noble horse gave two or three convulsive springs, then reared up and fell back on the brave fellow that rode him. I was riveted to the spot, and was still sitting when Charley returned with my horse, which had gone some distance. He said, "Mount, Cap'n, quick, they will be on us." We were soon on the way again, and finding that the chase had ended slackened our pace and reached camp in safety. And we had our turkeys.

This story would be incomplete without its sequel. The next day the officer of the day led up to my quarters a handsome bay horse bearing a young lady. She wished to see the officer that had led the scout on the preceding day. Captain Ferguson kindly consented, and she came under my escort, myself and Hatten, sent her to me. She dismounted, entered the office, and being furnished a seat, I asked her kindly, "Madame, what can I do for you?" She blushed; tried to say something; failed; blushed again; and finally unwrapped a beautiful bouquet of flowers, handed them to me as a peace offering, and having gained her composure, said: "I have come to ask a great favor of you, Sir. I told her to marry him, and they married him to his loss. I told her the Texas, and his brave young wife, during the lion in his den, had ridden some fifteen miles to the Yankee camp to procure a surgeon to dress her husband's wounds. It is needless to add that when the request was made known to Gen. Hawkins it was cheerfully granted. A surgeon with the necessary appliances was sent to the wounded man's relief, and after a few days' absence returned and reported that the dressing fellow was out of danger."

CAPE GIRARD, MO.

CAMP ROCK.

## A SEAFARING REMINISCENCE.

BY FRANK H. CONVERSE.

THAT sailors are naturally superstitious, goes without saying. And this is not so much to be wondered at when one comes into contact with the faces of the ignorant and unlettered condition of many of them, and the strange, even mysterious, nature of certain sea phenomena which they are constantly encountering.

A singular, and, I must confess, inexplicable, illustration of this came into my experience when I was quite a youngster, making my second or third voyage before the mast, in a very old ship called the William and Mary. I had left the ship Tonawanda, known to many Philadelphiaans, in Savannah, and with this other one I was bound for New York, on board the William and Mary, receiving fifteen dollars (wages were low in those days) for the "run" to New York.

The William and Mary was a small, full-rigged ship, whose antiquated appearance indicated that she must have been built during the past century. Her masts, sails, spars and rigging were alone of modern make, while her hull was strangely old-fashioned. The stern, which was high and overhanging, was covered by a most fantastic mask, though the carvings were partly concealed by the many coats of coal-tar which had been liberally applied, voyage after voyage. Her beam was full one-third the entire length of the box-like deck, with its shoulder-high bulwarks, and the bows were as bluff and swelling as those of a Dutch galliot.

The captain, Robert Tharber, was an Englishman from somewhere about Deal, I can remember rightly. His two officers belonged in the south of England. They were all quiet men, not given to bullying or blustering, and as the crew was a very good one (for in those days the merchant service was not made up of the mixed foreign element composing our present-day crews) the voyage proceeded without any incident worthy of notice, until the little event that I am about to relate.

By the time we got up with Hatteras, the wind, which had blown from the most part from the south and southwest, hauled round into the north-west, and began to blow as it only can off that stormy cape in the month of February and March. Being crank, and very deep with her heavy cargo, the William and Mary was not a very marked success on a wind—indeed, I am inclined to think that she made nearly as much leeway as headway, for the thirty-six hours that it nor'west'ed lasted.

It was in the middle watch, the second night of the gale, and blowing harder than ever. Under three reefed topsails, fore-stay-sail, and reefed spanker, the old ship, with her yards braced sharp against the backstays, was staggering along through, into, and under, a tremendous cross sea, nearly as fast as one could whip a crab through a barrel of soft tar—to use a sailor's simile. As she butted up against the tremendous billows, or sank into the great abysses that yawned beneath her keel, sea after sea broke over her continuously, keeping the vessel so full of water, that Captain Tharber had the lookout stationed in the slings of the fore-yard, and called the rest of the watch up in the gangway on the lee side of the quarter, for it was almost impossible to stay on the main deck, without danger of being washed overboard. I remember my watchmates, as being rather out of the ordinary run of common sailors generally found on shipboard. Two, besides myself, were Americans. One of these was a middle-aged man only known to us as Tom. Not many years previous he was Captain Thomas B. F., at one time master of the ship Amethyst, built in Boston, in 1829—a ship which when commanded by Captain Jakey Howes, once made the passage between Liverpool and New York in sixteen days. Later, the Red Jacket made a like passage in thirteen days, one hour, and twenty-five minutes, and if I remember correctly, the formerly famous clipper ship Dreadnaught, is said to have done almost as well. This man, formerly a Harvard graduate, with a wild streak penetrating his Boston blue blood. He had in the ten years of his seafaring life visited almost every navigable port in the world, and it was his laughing boast, that during this time, he had also sailed under nearly every flag that floats from a ship's peak halyards—even having once made a voyage in a Chinese junk, from Whampoa to Melbourne, Australia. If I mistake not, this erratic sailor is now the oldest captain of one of the largest ocean steamers afloat.

These two were crouched under the lee of the after-house, while my third watchmate—a tall, reserved Russian, nicknamed "Silent Peter," by reason of his peculiar reticence not only regarding himself, but in general conversation—looked refuge by my side in the partial shelter of the long loat which was secured on the top of the house. Now, among sailors, for some reason whose origin I have never been able to discover, a Russian, or Russian Finn, is looked upon as possessed of certain powers closely verging upon the supernatural—all comprehended under the generic title of "wizard." Forecastle Jack asserts that some of them can at will bring good or bad luck to a ship; that they have the gift of second sight, and can also see phantoms of their drowned shipmates. So I was not so very much surprised, when Peter, who had hardly spoken since we took our seat on the house, suddenly asked—

"What do you believe of the supernatural, what you peoples call the ghosts?"

"As I never saw anything of the kind, I can't say I do. Seeing is believing, you know," I answered carelessly.

"Um"—retorted Peter, who not only spoke English quite fluently, but two other languages besides—"well, look you. You may at me laugh," he continued with an earnestness which impressed me strangely, "but last night, when from eight to ten, I did see one strange thing. You know how it was?"

I nodded without speaking. "For all the dark," Peter went on, "I see plainer than you now, a strange dress man who belongs not to the ship, stand for one, two hour in the weather gangway here, hold of the topmast backstay."

"A stowaway, perhaps," I suggested, more for the sake of an answer than because I really believed anything of the kind.

The stowaway shall not be a man thirty-three or four years old, dress in old-fashion soldier-coat and top-boot with tight breeches," returned Peter with a quiet shake of the head. "He had to him a face that was some thin," continued the speaker slowly, as though recalling the features of the mysterious stranger, "but you would see him as one of a character determined. His hair was long, of color black, and Peter was a man of more than ordinary education. He seemed less reserved with myself than with the others, and I had gathered from fragmentary bits of his half confidences, that at some time in his life, he had been an officer in the Russian navy. This much, together with the fact that he had a twin sister in New York, who was the wife of a wealthy fur dealer on Broadway, was all I did know of him. Such anomalies as this singular shipmate's appearance and his history of himself to ourselves are not unfrequently met at sea. There are few safer places for a man who wishes to lose sight of his past life and present identity, than a ship's forecastle.

Peter said but little in reply to my rather flippant comments upon his narration, until the striking of four bells called him to relieve the watch.

"No one shall know what may to him happen," he quietly observed, and prepared to obey the summons. "and should it come to me any time, tell my sister that will come aboard in New York, there is the letter for her in my chest." And before I could answer this singular request he had left my side.

Two hours later, while we were stowing the mizzen top-sail in one of the fiercest nor'-west squalls of sleet and hail

that I ever experienced, Peter lost his hold and fell, striking head first on the rail beneath and going overboard. The blow itself must have stunned, if not killed him outright, and with the terrible sea then running, it would have been worse than madness to have lowered the clumsy old tub which we called a long-boat.

So the waves and storm sounded their requiem over the drowned sailor, and the old ship went wallowing on. Next day the gale abated; the wind came round to the southward and eastward and blew us fairly into port in rather less than a week. As usual, the crew all left, bag and baggage, directly the ship was made fast. Disliking the surroundings of a sailor's boarding-house, I had obtained permission to remain on board until next day, when I was intending to start for home. After supper Captain Thurburn was alone, and a little later both officers, leaving only the colored steward and myself in charge. As I stood leaning idly over the rail, a private carriage drawn by two stylish black horses drove rapidly down on the pier, from which a groom assisted a tall, slender lady in deep mourning. As she approached the vessel's side and threw back a heavy cape veil, I could not repress a slight exclamation of astonishment, for though her manner, delicate, her features were almost perfect copies of the company of my drowned shipmate, and I at once knew that this must be the twin sister Hilda of whom he had once spoken.

"You had a sailor—Peter Androvitch—on board," she remarked in tones singularly like those of her brother, but speaking in quick, agitated tones.

"We had," I began hesitatingly, but the lady interrupted me.

"Yes, I know; he was drowned the night of this week; he told me himself," she answered in a tone of repressed emotion, and as I stared at her in open-mouthed amazement she stepped on board and entered the dingy fore-cabin. She remained there a moment or two, and when she came out I saw that she held a letter in her hand.

"His chest and the things in it you may have, sailor," she said, and I caught her eyes were full of tears. But before I could stammer my thanks she had entered her carriage and was driven away.

The entire affair seemed so curious that when Captain Thurburn came aboard I told him the whole story, and even his usually phlegmatic nature seemed to be somewhat stirred, particularly when I narrated that part of it relating to the singular appearance which Peter had described to me. "It is strange, Harry," he said after I had finished, "and I'll tell you to me is the strangest of all. This old ship, built a little more than a century ago, is the one that carried General Wolfe and his staff from Portsmouth, England, at the time when the British troops were sent over to conquer Canada. And the description Peter gave of the apparition, or whatever it was, closely resembles an old steel engraving of General Wolfe himself that hangs in my father's house in Shrewsbury."

I gave the story exactly as it occurred, without the slightest embellishment, nor do I offer any comment upon it. The main facts are copied from an old pocket diary, and I have written them out in detail as to rely illustrative of the time-honored and well-worn quotation:

"There be more things in heaven and earth  
Than thy philosophy dreams of, Horatio."

## Natural History.

### THE COMMANDER ISLANDS.

FROM the advance sheets of the proceedings of the United States National Museum just issued, we learn some details of the natural history of this group of islands, situated between Alaska and Kamtschatka, and of which Bering Island is the most important. This group has a great historical, as well as zoological, interest, for it was here that the explorer Bering met his death.

Mr. Leonard Stejneger, who is known to many of our readers as an ornithologist and naturalist, has spent some time among the Commander Islands, studying the zoology of the group, and as might be supposed, when the geographical position of the region is considered, he has found this study full of interest.

Bering Island, which was the first of the group to which he devoted much time, is the last of the Aleutian chain of islands, and is only about one hundred miles from the nearest cape of Kamtschatka, and about twice that distance from Attu, the nearest of the Aleutian Islands. The character of the fauna of the island is, as has been supposed, palaearctic, agreeing more or less closely with that of Kamtschatka. This is due in part to the greater proximity to the coast of Asia, and also to the fact that the prevailing winds and currents are from the westward, and visitors are thus more easily carried from that direction. Stejneger concludes, from several facts, that the islands were once a sub-archipelago, that these islands during the period previous to which they received their present fauna, were wholly covered by the sea, and that therefore the present inhabitants are immigrants from two continents, those from the west coming more easily and regularly, while those from America are accidental visitors, for our continent contributes but very little to the fauna of these islands. The notes from which we quote are contained in a letter to Prof. Spencer P. Baird, Secretary of the Smithsonian Institute, and we make copious extracts from them, for they are to the zoologist very delightful reading.

As announced in my letter from San Francisco, the steamer Alexander started on the 5th of April at noon. The wind was very unfavorable, most of the time blowing from the west, and very often with a force of four miles only or more. Up to the 10th of April the wind was blowing in a direction of wind from a different quarter. As we were compelled to make about one thousand miles under sail, our progress was necessarily slow, so that on the 23d of April we found ourselves only in longitude 145° west, and latitude 50° 35' north, about 500 miles southwest from Sitka, and as many miles southeast from Kodiak. On the 30th of April we passed the Aleutian chain between Segeen and Adia, in fog and sleet, and the Bering Sea received us with a veritable hurricane from the east-northeast. After having stopped at the village of Copper Island the anchor was dropped in the morning of the 7th of May at Gavan, the harbor of Bering Island, where I landed with as much of my baggage as could be taken on shore before the cargo had been discharged in Petropaulsk. For long I was comfortably lodged and began my work.

At first I was much confined to my station on account of

the meteorological observations. Not until the obliging agent of the Alaska Commercial Company, Mr. G. Chernick, had been instructed how to take and record these observations, could I think of making longer excursions. Many thanks are due to him for his kind assistance. Thus I was unable to cross the northern part of the island, consisting chiefly of flat swamps and tundras, of lakes, a moderately high plateau, and a chain of interesting table mountains of about the same height, while the southern, mountainous and larger, two-thirds of the island remained a complete terra incognita to me. I therefore planned an expedition with the purpose of exploring the secrets of this region, the more as it was especially there that Steller had made his observations. But I had to wait until the sailing season was over, for all hands now were occupied in this, their chief, and one may safely say their only, work.

Meanwhile I resolved to go to Petropaulsk on the 16th of June to establish a meteorological station, and to hire and train an observer. Besides, it was my desire to study as much of the natural history of Kamtschatka as the surroundings and the limited time would permit.

The season was unfavorable, as the vegetation was already so luxuriant as to make it difficult to move outside of the roads, and the mosquitoes were plentiful enough to make it extremely painful to lay in wait for birds or to creep around searching for spiders, beetles and snails. However, if the stay was not very profitable to the collection, it was not entirely without results, for I gained a great deal of valuable experience which will be of use to me during my proposed visit to Kamtschatka next year. What rendered my sojourn there so especially instructive and instructive was the daily intercourse with the experienced and incipient explorer of Eastern Asia, Dr. Benedict Dybowski, who, of course, better than anyone else, could give me all desirable information. On the 15th of July I found myself again on Bering Island.

The following weeks were occupied chiefly by observations on the rocky, about 15 miles distant from the village, and I could not leave the island until the expedition toward the South before the middle of August.

Every one suggested that the most practicable way would be to go around the island in a boat, as traveling overland with dogs would be difficult and expensive, and, on the other hand, several places of interest would be inaccessible by this route, which, besides, would offer little or no opportunity for carrying the necessary outfit and the objects of nature study. I had, however, collected during the journey. The prospect of finding a skeleton of a sea-cow at any one of these places, seldom or never visited by the natives, was a very probable one, and as such a skeleton alone would be enough to lead a boat even larger than ours, I resolved to hire six Aleuts, to man the boat of Mr. Grebnitzky, kindly placed at my disposal. Mr. Osche, in the service of the Alaska Company, who during a sojourn of several years had traversed the island in all directions on his hunting expeditions, and had thereby gained an extensive knowledge of the island and its products, joined the expedition as a volunteer; an assistance the more valuable, as without it I should hardly have been able to realize my intention.

The special object of the expedition was to study the general natural history of the southern part of the island, to collect specimens of all kinds, as far as possible, and to permit, but especially to search for remains of the sea-cow. I also proposed to survey the island for further explorations, and to collect material for a more correct and detailed map than the one in existence. Besides I wished to identify the places mentioned by Steller in his narrative, in order to compare his description with the localities as they present themselves to-day, and to restore the original names. I also desired to visit the spots where Bering's vessel was wrecked, where the ill-fated expedition wintered, and where Steller made his observations on the sea-cow.

The "circumnavigation" took place between August 21 and the 1st of September. It was attended by all the disagreeable consequences of fog and rain, of wind and surf, and the few skins which could be obtained under these circumstances were almost spoiled at our return. The personal inconveniences during a two-day journey in the ocean, along an open coast without harbors or anything like a shelter; of being kept wet by continuous fogs and rains; of sleeping under an old sail, are serious; but no naturalist would ever count them should the result of his work be in inverse proportion to his troubles.

Unfortunately, I cannot so report, because the animal life, contrary to my expectations, was much poorer with regard to species than in the northern part, although the number of individuals was considerably larger. In fact, the only addition to my list of birds observed on the island was a single species, *Rissa brevirostris* Brandt, a species strangely limited in its distribution on the island.

I inspected a large colony of *Rissa kotzebui* Bp., situated on the western shore, about 18 miles from Cape Mamai, the southwestern point of the island, where thousands and thousands of this black-legged kittiwake were now feeding their almost full-grown young ones. Among them a single red-legged bird, quite lonely, and apparently without any young, had placed itself on a narrow shelf of the rocky wall. It was the first and the only one that I saw, and I was fortunate enough to shoot it. *R. kotzebui* was observed in countless numbers along the western shore; but as soon as we had doubled Cape Mamai we met as large or still larger flocks of *R. brevirostris*, among which not a single black-legged individual could be detected. I minutely surveyed a breeding colony on this side, and the result was the same, not a single black-legged one was seen. And thus the red-legged form completely excluded the other along the eastern shore, except at Cape Tonkoj, where the coast trends towards the northwest. Here on the cape a larger flock of kittiwakes was sitting on the shore, and I picked out that only the legs of the other row could be seen; they were all red. I shot, however, and of the ten lying on the ground, seven were red-legged, while three belonged to the black-legged species. The young of *Rissa brevirostris* also has dark legs, but I need not expressly state that I did not make any mistake in this respect.

On the other side of the last mentioned cape the old acquaintance reappeared as exclusively as along the western shore. Thus, the genus *Rissa* occupies the whole shore line of the island, of which *kotzebui*, however, has usurped nine-tenths, leaving to *brevirostris*, as an exclusive possession, but one-tenth, or about twelve miles.

We found, however, another animal, which I much regretted not to have been able to skin and to carry with me. But as it was a *Belonogadus*, fifty feet long, I was compelled to leave it where it lay, and spent a day on the spot in order to take the necessary measurements, and to make such investigations as the far-advanced decomposition of the

carcass would allow, as a matter of course. \* \* \* But now as to the sea-cow. We found the remains of one, and I will here give an extract from my journal concerning this event.

August 27, 1892, Cape Tolstoj.—Mr. Osche went out hunting, while I was occupied in searching for fossils. From the extreme point of the cape I took some bearings of the other capes visible from here, and was just looking over my collection of stones when Mr. Osche returned, with the cheerful intelligence that he had found what he thought to be a skeleton of a sea-cow. Immediately we seized the spades and set out for the place. Having removed some spaces full of soil, I soon became convinced that his supposition was right, but at the same time it was evident that the skeleton was in such a bad state of preservation that it would hardly be of any use. It was situated in a sand bank twelve feet high, about equally distant from the base and from the top of the shore, close to a rivulet, which here had cut its bed through the bank and carried away the whole caudal portion of the skeleton. The distance from the sea was 500 feet in a straight line, and the height above high tide not less than 10 or 12 feet. The other capes visible from here, and was just looking over my collection of stones when Mr. Osche returned, with the cheerful intelligence that he had found what he thought to be a skeleton of a sea-cow. Immediately we seized the spades and set out for the place. The other capes visible from here, and was just looking over my collection of stones when Mr. Osche returned, with the cheerful intelligence that he had found what he thought to be a skeleton of a sea-cow. Immediately we seized the spades and set out for the place. Having removed some spaces full of soil, I soon became convinced that his supposition was right, but at the same time it was evident that the skeleton was in such a bad state of preservation that it would hardly be of any use. It was situated in a sand bank twelve feet high, about equally distant from the base and from the top of the shore, close to a rivulet, which here had cut its bed through the bank and carried away the whole caudal portion of the skeleton. The distance from the sea was 500 feet in a straight line, and the height above high tide not less than 10 or 12 feet. **GAME RESORTS.**—We are always glad to receive for publication such notes of desirable game resorts as may be of help to the readers of FOREST AND STREAM. Will not our correspondents favor us with such advice?

## NOTES FROM CAPE COD.

I HAVE been down here since the first of April, and have never before seen bay birds as scarce as they have been this spring. I will try to show how some of the shore birds have decreased of late years. We will begin with the golden plover, one of the handsomest and largest of the plover family. My uncle is a close observer of birds, and has been a sportsman many years. He says, "When I was a boy and went to school, the golden plover would come and alight in the fields around the schoolhouse in large flocks, and was so tame that we could walk within a few yards of them before they would fly." That was twenty-five years ago and no person shot plover there then. Let us go there now when there is, not a flight, but the arrival of a small bunch. You will see a number of sportsmen lying in wait for them, and they are fortunate if they shoot a dozen each. If they decrease in the next twenty-five years, as fast as they have in the last, which they surely will, unless a law is made to prohibit shooting them for a number of years, the whole year round, they will become an extinct species only to be seen in museums and colleges.

The black-bellied plover has also rapidly diminished within the last few years. On one marsh, where they were quite abundant in the spring migrations several seasons ago, only a few dozen stopped this spring. The reason they did not stop is not because they were shot there in springs before, for only one man has been gunning there at all, and he has not lately. It is simply because they have decreased with such rapidity that there is no great number to stop.

A few turnstone or chicken plover stayed with as a short time this spring, and I succeeded in obtaining several good specimens. While I was setting them up an old man, that has lived here all his life, happened to be in the room. He looked at the birds a few moments, and then said, "I have seen a great many of them in my days." He called them rock birds and said, when a young man he and a companion with a stick and lantern used to kill as many as they could carry home. He also said, the first bird that was heard in the spring was the killdeer plover, and they were plentiful, but for the last five years he had not heard a single one. And bobolinks, until lately, were seen in small numbers on the reeds in the brooks here. This year I have not seen or heard a one.

The yellowlegs and humbirds are getting scarcer and scarcer every year, and this spring the winter yellowlegs were very scarce.

Thirty years ago the sickle-billed curlew was quite common, but they are rarely seen here now.

The ranks of these smaller shore birds, such as the ring-necked and piping plover, peep and least peep, are growing smaller and smaller, and ten years hence will be as scarce as golden plover are now.

Within the last day or two a few peeps and ringnecks have made their appearance. We expect brown-backs by the twelfth.

Quail are quite plentiful here, notwithstanding one hundred were shot within an area of a few miles this last fall. Even as I write I hear them calling in the fields near by. I saw beveys as late as the first of June. Have not seen any young quail yet, but have seen two fine beveys of ruffed grouse.

CHESSTER.

EAST BREWSTER, Mass., July 5, 1893.

## KYNOCCH SHELLS.

*Editor Forest and Stream:*

I have used one hundred of the Kynoch shells in four different breech-loaders. When the advertisement first appeared in FOREST AND STREAM I thought they would be an excellent shell, so sent to New York for one hundred, and the guns I have used them in are the Fox, James, semi-hammerless and Field; the last two are single guns. Out of the one hundred, using them the first time there were only two or three misfires, but after being recapped about one-half of what were used in the Fox gun failed to go. I at first laid it to the primer, but tried two kinds with the same result, but I soon saw what the trouble was. The head of the shell was so soft that when the plunger struck the cap the metal would not resist the blow but would drive away so far as to be out of reach of the plunger and that, being the misfire. In the James they seldom missed, as the plunger was different, but I can not use them in it as the chambers are not perfect, and they can't be used in a gun imperfectly chambered. In the Field they failed to go after being recapped, as this gun also has a large chambered plunger. In the semi-hammerless they work to a charm. This gun has a long firing-pin that follows up the cap, and they very rarely miss, and being made by the same makers as the Fox is perfectly chambered, so the shells do not expand. Unlike "Medicus II." I have not had one burst. I have fired some of them half a dozen times.

In regard to loading, I do not like the mode they have of scolloping the shells, as it is apt to cause annoyance when one is in a hurry to get them into the gun. I made a stick with a small gauge similar to the one advertised, but discarded it. My mode is to recap them with a Remington recapper, and if the head of the shell is pressed in to put it on a bench or table and drive it out again. Then I use the Parker loader with No. 10 wads in 12-gauge shells. This seems to hold the shot in nicely, but unless one uses this kind of loader the 12-gauge wads would expand the shells so as to be unfit for use. They can be put in almost any shape, but when fired they are as perfect as ever. I think the makers will miss it if they do not make the head of these shells a little more solid. It looks rather bad to have a man go to a glass ball match and have about one-half of his shells misfire.

C. B.

NEW HAMPTON, N. Y.

*Editor Forest and Stream:*

I have read with much interest the several communications in regard to the Kynoch shells.

I procured two hundred of them; have used all once, and some second and third time. I load with number of wad hat corresponds with that of shell. Make three dents just over and above wad with the loader. They work well and

stood the severe test of duck and snipe shooting to my entire satisfaction. I had none to spare in the gun, and no misfires. The complaint of misfires, I think, comes from defective locks or faulty firing pins. They are open, however, to the same objection as the heavy brass shells, namely, one must save them. When they can be made cheap enough to throw away, they will, indeed, be "perfect."

I am now trying the star brass wads. I have used sixty shells loaded with them at target and glass balls. They do not make any change in pattern or penetration, and do not scratch the barrels. I fired one hundred five times with a shell in the other barrel, to test their holding properties. No very great loosening was noticed until the fifth shot, when the wad came entirely loose.

Whether they will stand the rough usage of field work or not, remains to be tested. From above experience I very much doubt their doing so. I of course used the brass wads in paper shells.

We will have plenty of quails this season. Their merry whistle can be heard in every stubble.

Bass fishing has proven an entire failure this season, the first time for many years.

DICK.

BRAZIL, Ind., June, 1893.

*Editor Forest and Stream:*

In your issue of June 28, "H. V. L." Hoboken, N. J., advances the idea that the difficulty in using the Kynoch shells was due to imperfect chambers. I think not, for this reason: I have used Winchester's shot shells for over two years, firing from some of them probably over fifty shots, and to-day I can extract them from the gun with my fingers, without any effort whatever, and I believe that if there were imperfections in the chambers such as he mentions, the brass shells I have used would have expanded so as to be truly irremovable. I have seen others experience great difficulty in extracting their brass shells from their guns after long usage, but happily I have not been troubled in this manner, and I come to the conclusion that my gun must be slightly smaller at the innermost end of the chambers. I am not one to condemn, especially implements pertaining to the gun, unless facts warrant it, and I was as pleased as a boy with a new top when I read of the merits claimed for the Kynoch shells, but upon giving them a trial I was greatly disappointed. I neglected, in my previous communication, to mention the gun and charge used, and will do so now: The gun is a Clabrough, 10-gauge, double breech-loader, with all the modern improvements. I used 4 dz. Hazard ducking powder (Dixon gauge), with two pink-edge No. 8 wads on top, 12 oz. No. 5 shot and one pink-edge wad, just such charges as I always use for ducks. The sample shells I use were slightly dented when received by mail, but not apparently as much so as crimping would render them. I have ordered a new sample, and hope to be able to make a more favorable report. I should say that the breaking of these shells as reported by "Medicus II." in your issue of June 28, was due to the shells being too small for the chambers, and the butt being of heavier metal than the rest of the shells, it would not expand as readily and caused them to break apart. I consider this a subject of vast importance to sportsmen, and am pleased to see the reports coming in from all quarters. If the difficulty we experience in them is due to improper loading or a faulty gun, we want to know it, and if in the "Kynoch Perfect," ditto.

D.

MANTOWOC, WIS.

*Editor Forest and Stream:*

I notice in your issue of June 31, a short article from "D" on his experience with the "Kynoch perfect" brass shells. I have been experimenting to a limited extent with these shells also. While the results were not as satisfactory as I could wish, yet they are not as bad as those of "D." My experiments were with a W. & C. Scott & Son No. 12 gun, weight 8 pounds, choke bore. Shells loaded with 3 3/4 and 4 drams Hazard No. 4 powder, 14oz. shot, 8 of each charge being fired. In two instances with 3 drams powder the shells cracked, one at the base and one about middle of shell. With the 3 3/4 and 4 dram charges the shells stood finely. I had no trouble in extracting empty shells after each discharge, and the pattern and penetration was probably some better than with paper shells under the same circumstances.

Another party has also been experimenting with about the same results as myself, having fired twenty charges of 3 drams Hazard No. 4 powder and 14oz. shot, with one burst shell at base. He uses a James gun, 12-gauge, and 8 pounds weight, and experienced considerable difficulty in extracting on account of expansion. The shells fit my gun nicely, and I think I could detect the least expansion.

And, very serious drawback to the crimping or loading tool. When the shells are worked by hand, the crimping and loaded shells are easily extracted, but when reloaded the crimping binds so it is in many cases impossible to extract the shells without removing the wooden head and driving them out with a stick; this I attribute to the shells not being put in crimp in same position as first crimped and not to expansion of the shell. I hope to hear from others on this subject, who have had a more varied experience and can present the matter to better advantage.

J. L. P.

KINGSBORO, IOWA.

*Editor Forest and Stream:*

As soon as the Kynoch shell was for sale, I procured several, and have since used them freely, and in my gun they are certainly a failure. I have forwarded to your address, a Kynoch shell that I have fired several times and also two patterns, one made with the Kynoch shell, the other with a Winchester brass shell. You cannot fail to notice the great difference between the two. The one made with the Winchester recording 224 No. 8 shot in a 30-inch circle at 40 yds., while the one made with the Kynoch only records 21½ (the shot circle, double the size of the other), and the pattern I send you is the best I can make with the Kynoch shell. On the other hand, with a Winchester or Parker brass shell or a Winchester, U. M. Co., Lowell, or Eley paper shell, I can average about 320 No. 8 shot, in a 30-inch circle at 40 yds. Why the difference?

I have loaded in every conceivable manner, and the best result I have before you.

With Winchester brass shells, at 40 yds., I use 3 drs. of powder, 2 Eley pink wads, 14 oz. shot, and one Eley or cardboard wad over shot, without crimping. My gun is a 12-gauge, 28-inch barrel, Colt, and with brass shells I use No. 10 wads, with paper shells No. 12. My Winchester and Parker brass shells are the same length as the Kynoch. As the Kynoch is so much thinner than the Winchester, I tried a larger wad, and varied the quantity of powder and shot, but the result was no better, always a poor pattern.

The penetration was about the same as the other shells. The shell that I send you seems to be perfect yet, with no splitting, etc., that others have complained of. Now, where lies the trouble? It must be with the Kynoch shell, somewhere. I think that I have given them a fair, honest, trial, and the result is certainly not very satisfactory. A. T. S. [If there is an abrupt shoulder in the gun used by A. T. S. it may be that the shot driven out of the thin Kynoch shell against it are jammed out of shape and so fly wild.]

*Editor Forest and Stream:*

I have noticed several articles in late numbers of FOREST AND STREAM, in regard to "Kynoch Perfect Shell." I had a sample package sent me, and my experiments have been conducted with only two shells, 12-gauge. I fired several shots from these shells, and in every case, pattern and penetration were both better than those made with paper shells. Charge used was 34 drs. powder and 1oz. shot. The gun was a heavy 12-gauge, full choke in both barrels. I could find no difference in shells after a number of shots and had been fired, and considered the tests satisfactory. Although closed with the fingers, the charge was held tight in shell in left barrel when right barrel was fired. I shall use these shells this fall, and think them superior to paper shells.

FAIRFIELD.

WALLACEVILLE, S. C.

**DECEPTIVE ADVERTISEMENTS.**—It is very amusing to read some of the advertisements for seaside resorts which are intended to draw the sportsman. The following is a sample: "Back of the island and along the sedgy clunch which cut off Atlantic City from the mainland are illimitable reedy meadows, fed with the salt sea, and a home for numbers snipe, plover and reed birds. About the middle of this month the snipe-shooting season will begin, and the half dozen varieties of the noble game will pipe sweet music to the sportsman's ears." Now the reed bird is never found near salt water, and the reed upon which he feeds is a fresh water plant. "The seven varieties of noble game" are found on the Atlantic City meadows in numbers only during the spring migration. All that will be found at Atlantic City by the middle of July will be peeps or o-yees. The note of a clapper rail or mud-hen will be heard often enough, but the bird will not be seen until September storm tides drive him to show himself, and then he will be potted in the water. Better it is for the sportsman to read up his weekly FOREST AND STREAM, select his grounds from the notes culled therefrom, than to be influenced by flouting advertisements written by those who are not of the cloth. Homo. [Our correspondent is in error when he states that the reed bird is never found near salt water. We have frequently seen and killed them among the beach-plant bushes between the salt meadows and the beach.]

**A FELINE RETRIEVER.**—Cooper's Point, July 2, 1893.—I have a cat, I call him Jerry, a name perpetuated from the grand sire, the original boathouse pet. Every fall he takes his six weeks' trip with me to the Delaware Bay on a duck shoot, and no one enjoys oysters, fish, and birds more than he. He is my constant companion, whether tramping the marsh, or lying behind the blinds. He is the best swimmer I ever saw, man or beast; answers to a dog call, and retrieves my birds when crippled on the marsh, and on one occasion brought a dead black duck to blind from outside of the decoys on the bay shore in quite a tumble of a sea. I could write pages and yet not do Jerry justice. A brute of a hostler at the hotel near by, the Delaware Bay Hotel, was and was pelting it with stones while it was struggling for life. Jerry was taking his usual afternoon siesta in the boathouse, and heard the cry of distress. In a moment he was in the water, and despite the stones thrown by the heathenish hostler and fiendish boys, he caught the drowning kitten by the nape of the neck, and brought it triumphantly to shore, depositing it in his own cosy cot. I promise you this and the truth will be found by any animal by a good nappy who read this. How the brute often puts man to shame.—R. G. W.

**WOODCOCK IN PENNSYLVANIA.**—Philadelphia, July 6.—There has been so much rain during the last week, our woodcock shooters have found the birds very much scattered and the weather so disagreeable that it is almost impossible bag. During the two first opening days of the season the good shooting has been bad, however, in the neighborhood of Burlington and Bordentown, N. J. All the woodcock killed in the criples near these places were birds bred there. I learned that two gentlemen who worked these criples last week brought in twenty. The weather now is sweltering hot and but few will venture into the river side thickets while it continues so. Two pairs of woodcock were killed on the morning of the 5th of July, on Darby Creek, near Potts; my informant stated to me he knew of the old birds settling there early in the spring to breed, and he expected to find at least six, but bagged all he saw.—Homo.

**STAR WADS.**—*Editor Forest and Stream:*—Herewith I give you my experience with the star wad, as requested in your issue of the 21st ult. Loaded ten shells, put star wad over pasteboard wad on top of shot, and after firing nine out of the right barrel, I found that the shot in left barrel had not started. With the star wad it was necessary to cut the shell or to crimp it, thereby much time and labor is saved; now add the advantage gained by filling the chamber of the gun up to the shoulder, thereby giving a better pattern, also the saving of the shell, and I think we have something that fills a need long felt. Trusting that we will hear from others in regard to the star wad in your next issue.—ROBT. W. HOPKINS (Secretary Aquehonga Gun Club, Staten Island).

**WOODCOCK IN WOODLAND CEMETERY.**—Philadelphia.—On the evening of July 6, two woodcock were seen to fly across Woodland avenue, West Philadelphia, then over the road and into the cemetery. At the lower end of these grounds, near to the Blockly Almshouse enclosure, there is an excellent feeding place which remains wet the summer through; the birds doubtless were attracted thither. Years ago we knew of woodcock breeding there, but of late more secure retreats have been chosen by the birds.—Homo.

**TENNESSEE.**—Nashville, July 6.—Squirrels are reported abundant, and a number are offered for sale every morning at the market houses, though the weather has been too hot and wet for the town Nimrods to go abroad after the sport. Commodore Wallman and Bob Grubbs killed a few doves and a brace of summer ducks the other day, but both are as yet out of season.—J. D. H.

ANTELOPE IN TEXAS.—Martin County, June 25.—Antelope are quite plenty in this section. I saw about sixty or seventy head this morning while traveling eight miles. They were within two miles of the railroad. Good sport can be had here in the winter season. Last winter while hunting here I often saw as many as 300 to 700 in a bunch. During a "norther" they will drift down on the plains as far as the railroad, and I have seen their trails along the side of the road as plain as if three or four thousand sheep had been driven along. Being afraid of the track they would not cross it, and seldom do so except when they see other antelope on the opposite side, or when the leader takes a notion to cross, then the rest of the bunch will follow.—W. A. W.

THE "EJECTOR HAMMERLESS."—Among the notable improvements in the manufacture of fine guns is the ejecting mechanism recently added by Mr. W. W. Greener to his hammerless guns. By an ingenious device, which is exceedingly simple and we should judge durable, the fired shells are ejected when the gun is opened; or if but one shell has been fired that is ejected, and the other simply extracted. We have recently tested the working of the ejector and found it to be as excellent in practice as in theory. In some of our English exchanges we find reports from those who have used the ejector hammerless, and the experiences there detailed appear to bear out in the fullest degree the claims made by the manufacturer in regard to the gun's durability.

DITCHES COUNTY ASSOCIATION.—Poughkeepsie, N. Y., July 9.—We organized on Saturday an association to be called the Dutchess County Association for the protection of game and fish. The following officers were chosen: W. S. Johnson, President; James H. Dudley, Vice-President; P. B. Hayt, Secretary; James Lenox Banks, Corresponding Secretary; Edward L. Morse, Treasurer; P. E. Ackert, Counsel.

## Camp Fire Flickerings.

"That reminds me."

FOR two or more very long hours had we sat in a boat on the untroubled bosom of Maidstone Lake, our baits within a yard of the bottom, seventy feet below us, "bobbing" for a bite. Three expectant fishermen, whose beaming countenances, radiant with hope, might craze with mirth the most stolid "bype" that ever darkened a community.—Prof. S. of Bangor, Capt. B. of Lancaster, and yours truly. Suddenly Prof. S. jumps to his feet: "I've got a bite."

"Yank, then," from both his companions. He did yank. Two more hours of weary "bobbing," during which the beaming countenances changed to a somber hue, then a blue, then a homely color, without till, but expressive, "I've got sick of this. Let's go home." Enough. We slowly wound in our lines. As the Prof.'s hook came from the water a quarter pound trout was seen impaled upon it, hooked through the brain, dead. Again his varying phiz changed to an expression of astonishment indescribable, and he made his companions scream with laughter as he slowly asked, "What made my bait go wrong like that?" We assured him it was a peculiar property of the water, and that was enough.

Coos.

IN FOREST AND STREAM OF MAY 24, the writer of "Notes on the Birds of Alabama," states that the local name of the ivory-billed woodpecker is "woodcock."

It is a fact, also, that to many dwellers in our land of cane-brakes and cotton fields, the true woodcock, *Philohela minor*, although at certain seasons quite numerous, is almost a *Philohela incognita*. The only bird that they recognize by the name "woodcock" is the aforesaid Ivory-bill. Thereby hangs a tale.

One day, at a country cross road, the writer was relating a story of what time he had hunted woodcock under the shadow of Muskonekong and along the swales of Waywaya, where the foot prints of poor Herbert (Frank Forrester) had scarcely been obliterated by the changing seasons, when John B. remarked that the woodcock was certainly the best of birds when properly served. His words attracted the attention of an individual who stood near us, an overseer on a neighboring plantation, whom we will call H. This person, believing that C. had reference to the aforesaid Ivory-bill, volunteered the remark that he "didn't know them damed things were fit to eat."

"O yes," said B., who saw an opening for a practical joke, in which he was never averse to indulge, "O yes, the finest bird that flies when properly cooked. You just kill some and try them. H. and you'll agree with us, I'm certain." Nothing more was said on the subject at that time.

About a week afterward we three happened to meet at the same place again, when B. asked H. if he had tried any woodcock.

"D—n your woodcock!" said H. "I killed a whole dozen and had 'em cooked, and I had as live eat so much fried alligator."

"What?" said B. "I don't expect you cooked 'em rightly."

"I cooked 'em like everybody cooks birds," said H. "There you made a great mistake," said B. "But tell us exactly how you did cook 'em."

"Why," said H., "I just picked 'em, and dressed 'em, and I think the old darkey said she parboiled 'em, but it didn't do 'em a bit of good." They ate like they were a hundred years old.

"I thought," said B., "you must have made some mistake in cooking 'em."

"Well, how the devil do you cook 'em?" said H.

"Well," said B., "in the first place you ought not to have picked 'em, and in the second place you ought not to have dressed 'em. All you've got to do when you cook woodcock is to tie a string around their necks and hang them up before a pretty hot fire—not too hot, though, nor so near as to scorch the feathers. Some people," he continued, "like 'em basted with salt and pepper; but they are good enough for me just dry so."

"The devil you say?" muttered H., as he turned away, and—

"I believe I'll have mine cooked that way next time, and—have you got a cat, 'em?"

But whether the Ivory-bill in H.'s cuisine was ever served according to B.'s recipe, I do not know, as H. never seemed disposed to talk woodcock afterward. TUCKAHOE.

## Sea and River Fishing.

To insure prompt attention, communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

ANGLING RESORTS.—We shall be glad to have for publication notes of good fishing localities. Will not our correspondents favor us with notes of desirable points for angling excursions?

### THE SECRETS OF ANGLING.\*

THIS quaint and charming old poem has been faithfully and literally translated from the original edition, and we therefore have it as it was written, instead of the modernized edition of Asher, which has long been the only accessible one. The latter took great liberties with the original, both in punctuation, orthography, and syntax, and consequently robbed the book of its principal charms. The original edition had on its title page the following: "Secrets of Angling. Teaching the Choicest Tooles Baytes and Seasons, for the taking of any Fish, in Pond or River; practiced and familiarly opened in three Bookes. By J. D. Esquire. Printed at London for Roger Jackson, and are to be sold at his shop neere Court, 1613." This appears on the title before the reprint.

The first Booke containeth these 2, Heads. The Antiquitie of Angling, with the art of Fishing, and of Fish in general. The lawfulness, pleasure and profit thereof, with all Objections answered, against it. To know the season, and times to provide the Tooles, and how to choose the best, and the manner how to make them fit to take each severall Fish.

The second Booke, Containeth The Anglers Experience, how to use his Tooles and Baytes, to make profit by his game. What Fish is not taken with the Angler, and what is; and which is best for health. In what waters and times to finde each Fish.

The third Booke containeth, The 12 virtues and qualities which ought to be in every Angler. What weather, seasons, and times of the yeere is best and worst; and what hours of the day is best for sport. To know each Fishes haunt and the times to take them.

Also, an obscure secret of an approved Bait, tending therunto.

We have read this volume with great pleasure, and commend it to all lovers of angling. It is so full of gems that it is difficult to select a few for illustration. In the "First Booke" we read:

Your *Anglers* that in the Springs and Waters sweet,

Your dwelling haue, of Every Hill and Dale,

And oft amidst the Meadows greene doe meet

To sport and play, and hear the Nightingale,

And in the Rivers fresh doe wash your feet,

While *Progresse* sister tels her wofull tale,

Such aye and a power unto my very lead,

As may suffice this little work to end.

Even two hundred and seventy years ago it was known that an angler should be properly dressed for his work, for we are told:

And let thy garments Russed be or gray,

Or colour dark, and hardest to desrey,

That with the Raine or weather will away,

And least offend the fearful fishes eye,

For neither Skarlet nor rich cloth of raye

Nor colours dyd in fresh *Asiatic* dye,

Nor tender silkes, of Purple, Paule, or Golde,

Will serue so well to keepe off wet or cold.

The obscure secret of an approved bait we will give, not only to refresh the memories of the older anglers, who may have forgotten it, but also to inform a generation who may not have seen it, of the most perfect thing ever discovered to attract fish to the hook. The ingredients may be difficult to obtain in some places, but the author assures his readers that if they understand it it is perfect.

Wouldst thou catch Fish?

Then here's thy wish:

Take this receipt,

To annoynt thy Bayte.

Thou that desir'st to fish with Line and Hook,

Be it in pond, or River, or in Brooke,

To blisse thy bait, and make the Fish to bite:

Loe, here's a meenes, if thou canst hit it right,

Take Gum of life, fine beat, and laid in soake,

In Oyle, well drawn from that which kills the Oake.

Fish where thou wilt, thou shalt haue sport thy fill,

When twenty faine, thou shalt be sure to kill.

Proletum.

It's perfect and good,

If well used in River or in Brooke,

Else not to be told

For Silver or Golde,

—B. R.

The work is neatly printed and gives us the first opportunity to read the author as he wrote, and Mr. Westbrook deserves thanks for preserving this book from extinction, or, what is as bad, the devastating hand of the "improver."

\*THE SECRETS OF ANGLING. By J. [John] D. [Jennys] Esquire, 1613. A reprint, with introduction, by EDWARD WESTBROOK. London: W. Satchell & Co., 19 Tavistock Street, Covent Garden, W. C., 1883.

### MOSSBUNKERS OR MENHADEN.

FISHERMEN in the north are complaining about the wholesale destruction of mossbunkers, as bluefish and other fish are driven from the coast as a consequence of a lack of food. With us the opposite is the case, for in the lower St. Johns fishing is seriously injured as a result of too many bunkers. Food is so plenty that the fish will not take a hook. On the flood tide bunkers enter the stream in immense quantities; in fact it is a continuous stream of mossbunkers for about four hours of the flood and five hours of the ebb tide. The supply is continuous from June until the latter part of November.

Land, labor and firewood are cheap, and as the fish can be captured in immense quantities, it might prove advantageous for your bunker fishermen to investigate the subject. Steamers would be unnecessary, as there is an almost unlimited demand for fertilizers in the State and for ice cheap.

An excellent market would be found in Jacksonville, Fla., and in Savannah, Macon, Augusta and Atlanta, Ga., for the

edible fish caught. In this market the wholesale price paid by dealers for sea trout, small sheephead and whiting, is fifteen cents per string. If the bunker men wished to indulge in the capture of larger and oilier fish they could net all the tarpon and porpoise wanted. Near Mile Point is a small bay with sandy bottom where porpoise do most congregate during the copulating season, and if a net could be constructed to hold them tons could be captured at a haul. Will some bunker man visit the lower river and investigate the resources of the St. Johns regarding the manufacture of oil and fish guano? AL. FRISCO.

JACKSONVILLE, FLA., JUNE 7.

### FISHING NEAR NEW YORK.

THE fishing season near the city has been an average one thus far, both in fresh and salt waters. The height of the season is from June to July in fresh waters, and from July until cold weather in the salt waters near New York. There is not a place in the country from which such a variety of fishing, and such excellent sport also, can be had as New York city. There are many places where more fish of any one or two species can be taken, and where larger fish may be captured, but take it all in all New York city is the best center for variety angling.

In the fresh water fishes there are the trout streams of Long Island, the Catskills, New Jersey, Connecticut and Rhode Island, all within a few hours' reach, while the Adirondacks are only from fifteen to thirty hours distant. The black bass fishing is not of the best, the fish being absent from such waters as have not been stocked with them, for it is not a native of this region. Still the New Jersey lakes and the Delaware River and its branches afford some sport. Pike are not found near the city, but small pickered are plentiful in places much esteemed by anglers.

The salt waters outside the harbor and up and down the coast swarm with gamy bluefish, often reaching ten pounds in weight, while the noble striped bass is taken about Staten Island up to three or four pounds, and from Montauk Point to Newport of the largest size. Weakfish, kingfish and other species are more or less plentiful, and are sought by anglers of all degrees of skill and of all grades of tackle, from the best to the cheapest. Haul nets, which are used in small boats and with shadler-crab and clam "twich," at every indication of a bite, and haul their prey in hand over head, and often come back with large strings. The "Fishing Banks," just outside Sandy Hook, are visited by steamers which advertise for passengers, promising from four to six hours fishing, "bait and lines provided," and return with a motley crowd loaded with lunch baskets, returning with the party well subnourished and usually seasick, with more or less porpoises, toadfish, sculpins, and an occasional weakfish or other game. The Long Island Railroad takes the angler to Great South Bay, where the fishing is often excellent, and now promises to be better since war on the illegal netters has been declared.

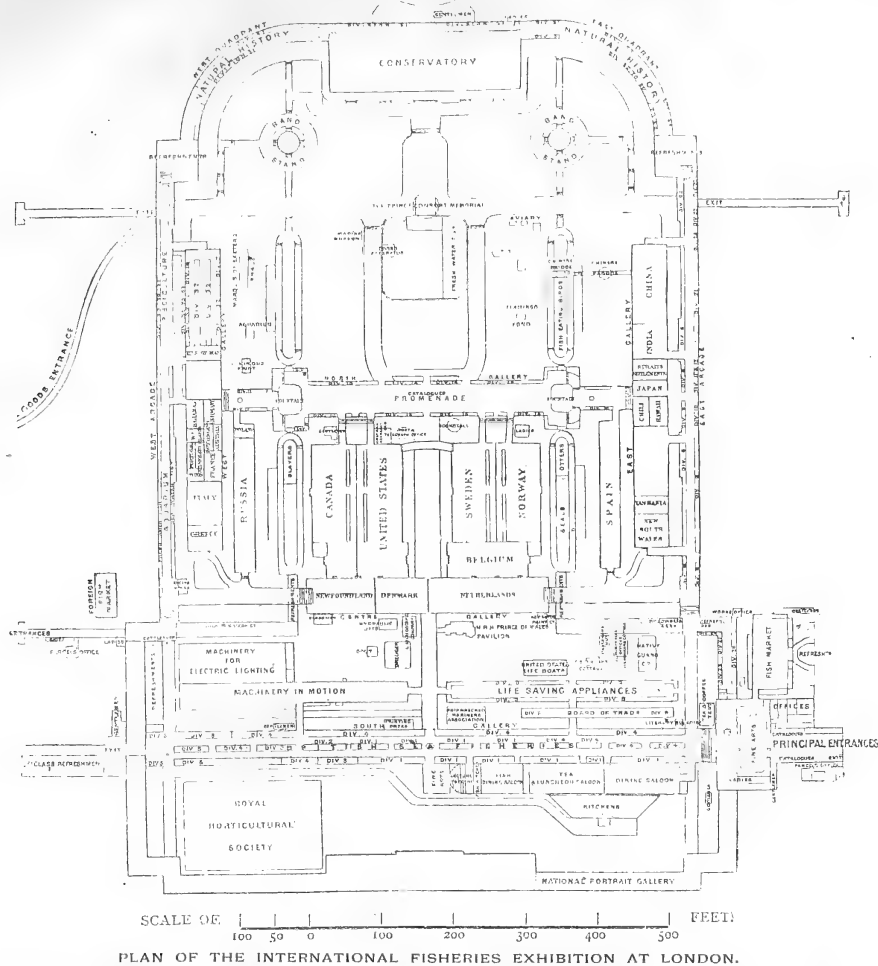

On the coast, the waters of New York and Newark bays and the Kill, small bass, white perch, blue perch, black drum, flounders, sea bass and eels are taken both from boats and off the bridges. This kind of fishing is not as good as formerly, on account of the pollution of the waters by the refuse products of petroleum which are dumped into them, and which have banished the lobsters and disgusted the crabs, so that all which cared to live cleanly have left for more savory sport loaded with lunch baskets. Fishing, especially behind the lighthouse at the Fish Point, and off the long bridge from the Point to Elizabethport. Near the junction of the Passaic and Hackensack rivers small striped bass are taken, and up these rivers are found catfish and eels in abundance for such as care to take them. Further up the Passaic some black bass are found, and the Passaic is perhaps the best grounds lying between Two Bridges and Little Falls.

With this variety all who love to fish, whether the scientific angler or humble brother of the hand-line and worm, can surely find sport suited to their tastes and their purses, and fish of all sizes, from the ponderous drum to the little sunfish, and from the royal striped bass to the slimy eel and the groveling catfish. If we have omitted the Hudson River, or any of the great fishing places, it is because there is no fishing worth the name in it near the city. The Hudson seems to be the poorest angling river in the United States. It still produces shad, eels and a few insignificant fishes, but nothing that the angler cares for—at least in any quantity. Even the sturgeon, which were once so plenty, have nearly disappeared.

COOS, NEW HAMPSHIRE.—A recent communication of mine in the FOREST AND STREAM regarding the fishing in this vicinity having brought me a "heap" of letters replete with inquiries, I take the same medium, with your consent, to reply. Coos, N. H., is the address of the village of North Stratford, N. H., the most northerly railroad station in the State, on the Grand Trunk Railroad, where it crosses the Connecticut River into Vermont. It has two regular Boston mails, and two regular Montreal mails, daily. There is a first-class hotel called the Percy House near the depot, with which is connected a livery, and the roads in all directions are unsurpassed. The trouting waters in the immediate vicinity are Nulhegan River and its branches, Paul Street, Lewis Brook, Black Brook, Bear Brook, Kimball Brook, West Pond, Turtle Pond, Notch Pond, Unknown Pond, South America Pond, North Pond and a score of other resorts, with pickerel and perch fishing in as many more places. I nearly forgot to mention Maidstone Lake, eight miles distant, with a first-class road, where the fishing this summer has been unsurpassed. Very recently there was a record of a pickerel caught weighing about four or five pounds. The abundance of fish will probably improve about here until September. The shooting is good, deer are very plenty and partridge ditto. Any communications addressed to Cy. Tibbets, or Dr. A. F. Willard, at Coos, will be freely answered.—A. F. W.

PENOBSCOT SALMON.—The run of salmon in the Penobscot River has been a small one this year. Comparatively few have been caught, but the individuals have been of good size, averaging over eight pounds. The absence of small fish is remarked, and had they been present in the usual number, the catch would have been up to or above the usual run.

QUEBEC, Canada, July 5.—Through the enforcement of the fishery laws, Jackson, Montreal and St. Charles, since mid-July, respectively from this city, which had been almost completely "fished out," are now teeming with trout, and the latter lake well stocked with bass.—H. H. Y.

PLAN OF THE INTERNATIONAL FISHERIES EXHIBITION AT LONDON.

**BASS AT ST. CLAIR FLATS.**—Buffalo, N. Y. June 30.—One two months ago I saw an article in *FOREST AND STREAM* from "Deep Troller" speaking of black bass fishing at St. Clair Flats. He has evidently "been there" and thoroughly enjoyed the sport, but even then does not extol it highly enough. Last season I saw a black bass (not a "large-mouth" bass) that was caught there, and he weighed 7½ lbs. This is a fact that can be easily demonstrated. The fishing there now is good, but not as good as it will be in July and August. One afternoon last week, I caught thirty-nine black bass, averaging three pounds each, on light tackle. Pickerel are also biting well on a troll, and from this time out any one that enjoys perch fishing can have his fill. They are almost too plenty; can be caught, two at a time, and will average over one-half pound. They abound where there is little or no current, and very light tackle can be used. The fishing grounds are about thirty miles above Detroit, and two steamers run from there daily. Joe Bedore keeps a first-rate house for hunters or fishermen to stop at, has good boats, and can furnish first-rate boatmen if desired. Among the best of these are George W. Cole, (in fact the best I have ever met) who, as a hunter or an oarsman, cannot be excelled, and has lived all his life on the Flats. James Slocum, at Star Island, also has quite a large hotel. The steamers from Detroit stop at his and Bedore's docks. Any one going to the Flats should not fail to visit the Bassett Channel. There I have had the best black bass fishing I have ever known, and it is very easy of access from Bedore's house. I shall go again in July or August, and would be very glad to meet any of my brother fishermen there and then. There is "room for all," and more than enough fish to go round. P. S.—Joe Bedore has a big ice-house well filled.—**LIGHT TACKLE.**

**SALMON IN THE RESTIGOUCHE.**—The fishing in the Restigouche River is better this season than for the past three years. Many salmon have been taken, and the sizes run large. We were lately shown a letter from Mr. William Blair Lord to Harry Fricbard, dated Fraser's Hotel, Matapedia, Province of Quebec, July 4, in which he says: "I send you by express a salmon I killed to-day. I would have sent you one sooner, but I have relatives and others who have prior claims on me. Besides, for two weeks, while the logs were running thickest, I caught just enough to send to my brother and sister. I have had very good sport below the club grounds. My largest fish was 36 lbs., and my whole catch averages over 30 lbs. I have caught 4, 3, 3, 2, 2, on different days. The four weighed 99 lbs.; good for one day. I hope the fish will reach you in good order, and that you will enjoy eating it."

**WEAKFISH AT BARNEGAT.**—L. M. Auerbacher, of this city, with three friends, caught over 300 weakfish on Barnegat Bay, one day last week. Largest fish 3 lbs., average about 1½ lbs. The small fish were returned to the waters as fast as taken. Party started from Parker's Hotel, Forked River.

**PHILADELPHIA NOTES.**—The Schuylkill River still continues muddy; the water is gradually clearing, however, but the heavy rains have rendered it more than usually turbid in the last ten days. Its tributaries are much clearer, and at this writing are in prime fishing order for bass. Bass fishing about Shawmont has been poor since the heavy rain fall. The catch since the opening day, June 1, this year, taking it as a whole, will exceed that of any season for three or four years. We may expect a falling off during the hot weather. Weakfish, seabass, blackfish, etc., continue to bite well all along the New Jersey coast. Many sheephead are taken, the fish measuring large. From Fish Warden Ore's report to the Fish Commissioners of New Jersey, of the value of the fish caught in the Delaware, in Camden county, I take the following, which is very interesting: "The shad catch be values at \$29,700; herring, \$3,225; sturgeon, \$300; and catfish, perch, black bass, etc., \$240, making a total of \$33,465. In trout run near Clemington, N. J., a trout was caught weighing one and a half pounds. The report asks that all herring nets and small meshes should be strictly prohibited after June 10, as thousands of small shad are destroyed by them. The retail price of shad on an average was thirty cents; herring seventy-five cents a hundred, and other fish averaged eight cents a pound, except sturgeon, which brought one dollar each."—*Homo.*

**NEW BRUNSWICK SALMON RIVERS.**—Frederickton, June 20.—The sale of fishing leases on the ungranted water grants, on the following rivers took place to-day, at the Crown Land office, at noon: Restigouche River, from Toad Brook to Almon grant, at Indian Brook, upset price, A. L. Light, Toronto, Ont., \$825; from Almon grant, at Indian Brook, to Tracey Brook, upset price, A. A. Mason, New York, \$500; from Tracey Brook to mouth of Kedgwick, upset price, H. R. Ranney, St. John, \$600. The river Kedgwick from its mouth up to Quebec boundary, upset price, H. N. Habersham, Savannah, Georgia, \$510. Nepisiquit River from its mouth to Indian Brook, upset price, J. W. Nicholson, St. John, \$360. Upsalquitch River, from the mouth to Great Falls, no bid; from the Great Falls upward, upset price, H. N. Habersham, Savannah, Georgia, \$210. Main North West Miramichi, from the head of the tide up, no bid. Patopedie, from its mouth up to Quebec boundary, no bid. Jacquet River, upset price, H. R. Ranney, St. John, \$130. Total \$3,435.

**SALMON IN THE MERRIMAC.**—Manchester, N. H., July 2.—Some small boys were observed pounding with clubs a large fish in a small pool on the Amoskeag Falls this morning. On being asked what they had, replied they did not know, but guessed that they had killed a young whale. Investigation proved it to be a salmon of twenty-one pounds weight.—*H.*

**GRAYENHURST, Canada, July 5.**—Owing to the beastly quantity of rain up here the fishing is rather poor, but just as soon as the weather settles we expect to have grand times.—*C.*

**A BOOK BY THE LATE LORENZO PROUTY.**—A memorial of the late Lorenzo Prouty will be published in a week by Cupples, Upham & Co., Boston. It is a book on "Fish their Habits, Haunts and the best methods of taking them," together with descriptions of trips made by Mr. Prouty in the woods of Maine and Nova Scotia. The work was in part written by Mr. Prouty himself, and in part compiled from his journal by his widow.

**BLACK BASS.**—A very interesting paper on the distribution of the black bass, by Dr. James A. Henshall, read before the American Fishcultural Association, will be found in another column. By the way, we presume most of our readers have seen Dr. Henshall's excellent paper on black bass fishing in the *July Century*, to which we called attention some time ago.

## Fishculture.

### THE AMERICAN FISHCULTURAL ASSOCIATION.

(PROCEEDINGS CONTINUED)  
ON THE DISTRIBUTION OF THE BLACK BASS.  
BY DR. J. A. HENSHALL.

IN this brief paper the writer intends merely to give the facts as they exist, relative to the distribution of the black bass species, without attempting to draw any conclusions therefrom from the laws which govern the geographical distribution of fresh-water fishes, or to offer any theory concerning the same. A study of the habitat of the black bass, however, will, no doubt, aid the biologist very materially in solving the problem of the distribution of animals.

The geographical distribution of the black bass is remarkable for its extent; the original habitat of one or other of the two species ranging from Virginia to Florida, and from Canada and the Red River on the north to Louisiana and East Mexico. In other words, it might be stated that the original geographical range of this representative American fish embraced the whole of North America, south of the British possessions and east of the Rocky Mountains, except the waters flowing into the Atlantic in New England and the Middle States, thus far exceeding any other fish of America in its distribution. Of the two species, the large-mouthed bass had the widest distribution occurring all through the vast scope of territory mentioned above. The small-mouthed bass had a somewhat limited range in comparison, not extending east or south beyond the Alleghany Mountains, though occurring everywhere else with the large-mouthed species.

At the present day the habitat of the black bass has been extended by transportation, and by means of artificial canals, so that it may be said to inhabit every State of the Union. It has also been successfully introduced into Europe, Scotland and Germany, thus occupying a wider range than any fresh-water fish in the world.

The fact that the original habitat of the black bass does not embrace New England and the Pacific slope is not remarkable, for the characteristically American forms of fishes, as has been observed by Prof. Jordan, are, generally speaking, rare or absent in the waters of these sections. This fact was

a hare can easily beat a far superior dog, but unsteady yet on hares. In "Stonehenge's" scale eighty points were given for natural gifts and only twenty for breaking, and I think this

gave a really good dog more chance to win, and rendered more justice to the point of view a breeder must take in the matter of field trials.

To encourage good breeding, why not give extra prizes to the best breaker? But never let the better broken but inferior dog have an advantage over the dog who shows the superior natural gifts which are of value to the breeder. I am certain that many judges are often actually vexed to see the best dog in a stake lose suddenly all his chances by following a hare or rabbit, as they are almost obliged by the practice of the day to give the preference to the dog which follows the hare, or was wise enough to avoid chasing hares. But why must it be so? Why not let such insignificant offenses be ten times compensated for by the wonderful and really valuable qualities of the high bred pointer or setter—*Prince Albert* in *Kennel Gazette*.

The following letter from Mr. J. H. Satter, which we clip from the same journal, also breathes upon the same subject, beside containing other matter that is well worthy the attention of all who are interested in our field trials:

Sir: Two or three things struck me at Blanford last month as requiring some alteration in our present system of conducting field trials.

(1). That sufficient credit is not given for superior pace and style.

(2). That chasing hares by young puppies is too heavily penalized.

(3). That the hounds ought to run his by to put him on terms of equality with the best opponent.

(4). That there should be no "guarding" of breeds in the All-England Stake.

As regards (1). I need scarcely say any sportsman which he prefers, a dog that dashes ahead and tries to find game, even though he should be a fault by being over zealous, or one that creeps about his toes and trots after his heels, looking as scared as a bushy young man at an evening party, whose chief forte (if he have one) must be "backing," and who, as things are, is sure getting out of a fast and furious all-round opponent by the negative qualification of doing nothing wrong.

It gives an opening, too, to a clever breaker to "hold back" his dog, and let his adversary "take his own throat," a sanguinary proceeding very often accomplished by a bold ranger when matched against a pottering duffer.

(2). As to "chasing hares" by young puppies. This may evoke some difference of opinion, but I must say I myself would forgive a young dog "mowing" a hare, if he jumped up just in front of his nose (I do not mean an animal that one continually beholds at all cry on the sky line) if I had seen him behave better in all other respects than his opponent, for instance, at Blanford, where I saw a dog, who, like others of her sex and brave Bijou, yielded to a little tantalizing temptation and fell.

Of course, "rules are rules" and it is wholesome to have them "hard and fast," besides which judges are often very "wary" simply because he has drawn a hare, and a good whole chase to put them out of their difficulty; but, unless judging by points is in vogue, I think our judges might be excused if they allowed a little leniency in this matter of "chasing hares" in young puppies (not all-aged dogs, and not you), and gave the erring juvenile who had previously shown superior merit "one more chance."

(3). As to "trimming off hares." It looks to me as you obviously unfair to put down a fresh dog against one that has lost a hare, or two; "gruelier," simply because he has drawn a hare. Let him get the benefit of his bye by remaining in for the second round, but let him be put on such terms of equality with the others he has to meet as circumstances will admit of. I mean, by having a run for a quarter of an hour, twenty minutes, or for such a time as the judges may decide, either by himself, with a kennel companion, or with any other dog in either of the stakes who is also entitled to a bye, so that that time may be economized. It would be an advantage to a runner. A result, you might say, a bit of study might get it, and an opponent who had met with a "gruelier" in the preceding round would be more fairly handicapped when he has to meet the bye dog in the next.

(4). "Guarding" breeds in the All-England Stake seems to me to be an anomaly, for why should a numerical superiority on the card be converted into a test of real merit in behavior? One of the objects in guarding in the Puppy Stake is to bring out the pointer puppy and the setter puppy of the year; but in the All-England Stake, which is a limited number of nominations, granted singly, the object is to find the best dog of the year, whether he be pointer or setter.

As we manage it at present, a superiority in numbers of either breed is a distinct advantage to that breed in the result. Merit should never be crowded out by weight of numbers. Some may say "it can't," but let these look at the card and see if it may not be so.

I contend that in the All-England Stake, somewhat differs from the Puppy Stake in that each nominator has but one nomination, so it behooves him to fill it with his best representative, and with that representative, whether pointer or setter, he must take his chance of an hour, twenty minutes, or the good or bad fortune to meet during his journey through the stake. To win it, he must be the best all-round dog in it, and must meet all comers, pointers, setters, droppers, or, for the matter of that, "any other variety," big or little, good, bad, or indifferent, and he must have the advantage of running against nothing but opponents of his own breed until they are all out of the stake or the final course. He ought to take them as they come, that is, as they are drawn. We should have a card in the All-England Stake, while, continuing to guard the two breeds in the Produce Stake, we shall still have also the best pointer and the best setter of the season.

I should like to hear what other field trial men have to say to these suggestions.

J. H. SALTER.

A VERY WET POINT.—Newark, N. J.—*Editor Forest and Stream*: One day last spring, taking my friend B. and my old red setter, who had been a long time in the house, we went out English snipe. The old dog winded game, and putting his head up, lead the way, closely followed by two guns in "present arms." Coming to a deep and wide ditch full of water, dog and men stopped, when the dog, having stopped in the middle, with only his nose and top of head out, and held that position until one of us went forty yards to the left and crossed on some fallen brush, and the other the same distance to right and crossed a one-mile fence, each returning along the ditch to the dog, when the dog, having crossed up out of the water, and getting his bearings, continued his course. After proceeding about fifty yards he came to the game, which we flushed—one quattering to the left and two quattering to the right. My friend killed to the left, and I, anxious to get in a quick double to right, was astonished to find, after firing my first barrel, no more birds to shoot at, having killed both with one barrel. It was hard to tell who enjoyed the result most, but the honors went to the old red dog.—REBECK.

CORRECTION.—*Editor Forest and Stream*: I wish to correct the statement in your issue of FOREST AND STREAM, of June 29, that I purchased the beagle bitch that won first prize at last Lowell bench show. Mr. Elmore has shown conclusively that his bitch Roxy is the rightful owner of that title. I had long been hunting for a long time for a good winner by different gentlemen, and did not at the time doubt the statement made by C. S. Dodge, No. 8 Walker street, Lowell, Mass., of whom I purchased her.—A. D. BARBER (Townsend, Mass., July 6).

CHAMPIONS.—*Editor Forest and Stream*: In your issue of June 29, 1893, an article on the subject of the champions, and I consider the point very well taken by your correspondent, who has stated the case fully as regards champions, when he says a dog is entered in the champion class, wins often with no opposition, and immediately he is trumpeted forth as such, or if there is any danger of his getting beaten, the next show he is frequently not shown. Now I claim, as does Mr. Dorsey, that this is all wrong. I think also that a dog ought to win at least three times in the open class before he can be entered to compete in the champion class, and even then he ought to be able to win twice before he is trumpeted forth as the champion; then if a dog is successful it won't be cheapening the honor, as is the case at present. I think Mr. Dorsey's views are held up, and I hope other bench show managers will well consider this matter, and that they will in the near future adopt some such rule, then exhibitors can look with pride on their winning dog.—W. H. ASHBURNER.

THE LONDON (CANADA) BENCH SHOW.—The date for holding the London Bench Show has been fixed for October 2, 3, 4, and 5. The entries will close September 19. Mr. Chas. Lincoln will superintend. Mr. John Fiddicombe, of London, is secretary, and Mr. C. A. Stone assistant secretary. Mr. Lincoln informs us that nearly \$1,000 will be offered in cash prizes and that quite a number of valuable specials will be given.

#### KENNEL NOTES.

##### NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST give the following particulars of each animal:

1. Color.
2. Breed.
3. Sex.
4. Age.
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Dam, with her sire and dam.
9. Owner of dam.

All names must be plainly written in communication on one side of paper only, and signed with writer's name.

##### NAMES CLAIMED.

*See instructions at head of this column.*  
*Linebreed.* By Mr. A. McDonald, Rockland, Me., for black and white ticked pointer dog, whelped March 19, 1883 (Brand-Prider).  
*Linebreed.* By Mr. A. McDonald, Rockland, Me., for black, white and tan pointer bitch, whelped March 19, 1883 (Brand-Prider).  
*Elmore.* By Mr. A. McDonald, Rockland, Me., for liver, lemon and white ticked pointer dog, whelped March 19, 1883 (Brand-Prider).  
*Beauchamp.* By Mr. A. McDonald, Rockland, Me., for spaniel dog, whelped March 21, 1883 (Brand-Prider).

*See instructions at head of this column.*  
*Linebreed.* By Mr. C. W. Feickert, Denver, Col., for red Irish setter, one dog and five bitches, whelped May 22, 1883, by Deacon (Ned Elcho-Bridget O'More) out of Mrs. Nellie.

*See instructions at head of this column.*  
*Linebreed.* By Mr. C. W. Feickert, Denver, Col., for red Irish setter bitch, whelped May 22, 1883, by Deacon (Ned Elcho-Bridget O'More) out of Mrs. Nellie.

#### KENNEL MANAGEMENT.

**No Notice Taken of Anonymous Correspondents.**  
G. W. K. New York.—Groom your dog thoroughly every day, using

J. F. D. Taunton, Mass.—Groom your dog two grains of iodine of potassium three times daily.

REARER, Colar Falls, Ind.—The trouble with your dog is undoubtedly that you are giving him too much food. Give him only one-half area unit—two grains for every pound of his weight—and follow in two hours with a dose of castor oil.

W. D. Boston, Mass.—The bad breath is probably from indigestion, as he is too young to have trouble with his teeth. Feed him light and often and keep his bowels open. Continue the vegetable diet and give him in addition thick sour milk.

W. D. Boston, Mass.—Give your young dog a year's war. There may be some foreign substance inside, possibly a var. For his feet use vinegar and water, oiled pads, and give him an occasional mild dose of epom salts. Feed plain food with no meat.

#### Rifle and Trap Shooting.

##### MUZZLE VS. BREECH-LOADER.

*Editor Forest and Stream:*

I send you for inspection a target made by Carlos Gove, now of Denver, Col., of ten concentric shot bands, made of the target, 30 feet high (in fact), on June 12, 1897, with his muzzle-loading target rifle, forty-five pounds, .45, ball conical and patched, telescope

Serran, Baltimore, Md., a quarter of an ounce of lead. The target and bullet holes are full size, and its center is at the intersection of the cross lines.

The authority for the above is derived from Mr. Gove and Mr. E. Berg (in parts), both of whom are strangers to me. Mr. Gove yet owns this rifle, and your well-known correspondent, "D.", recently stated that Mr. Gove sent one to him.

I recently received this target through the politeness of Mr. Gove, whereupon, in the interest of your readers as well as of historic record, and Mr. Gove's sent one to me. I am glad to see it published. To this I kindly consent, and I feel sure your readers will thank him for it. As for myself, I spend most of my leisure time in trying to beat others, and I am sure that I am not a bad shot. I have most carefully report this most excellent target to your readers.

I entertain, after careful inspection, no doubt that the target is strictly correct. Other than to reject it, I have carefully measured the shots from center to center, and they stand in the order of merit as follows:

No. of shots..... 1 2 3 4 5 6 7 8 9 10

From Centers..... .39 .25 .27 .28 .31 .32 .47 .50 .62 .70

String..... 4.02in. 1 Average..... 4.10in.

A half dollar nearly covers the whole ten shots, and each one of them at 50 or 60 yds., has his center of ball within the diameter of a

Here we can plainly see ten bullets starting from the same point the muzzle, and going over the same route to the target. It is a very fine thing, and the exact path of the bullet is anything more powerful and beautiful? I have never seen it in rifle shooting. And yet this is what the first class of hunting muzzle-loaders will do when they are loaded with lead. The weight in the hunting rifle is not necessary for steady shooting, as many suppose.

Question 1. Does the muzzle-loader shoot steady?

Question 2. Can the breech-loader beat this target?

I anticipate your correspondents must answer yes to question 1, and no to question 2. I will try to answer question 1, and I will try to answer question 2. He has once broken me down with his monosyllables "yes," "no," and being an "expert" with the rifle and

Now, I will give the breech-loader the balance of the year 1883 to surpass this target. The rifle may be shot at an ordinary rest, and use telescopic sight. But it must use its legitimate hunting ammunition, that which we buy at the stores, the same which has the conical ball, and which must be shot under the same conditions. The kind of hunting ammunition is the counterpart of the hunting rifle. Buy one, buy both, use one, use both. Thus say the makers of these,

ten shooters at ten clay pigeons, at 10 yds. rise, with the following result: M. Brigham, 6; Travis, 7; Smalley, 8; Stevens, 3; Gile, 8; Ma-

something to spare. But we are still inclined to give Crocodile the preference, and leave it to those interested to explain away her defeat. In chess, the last move of the interest owing to the absence of the cutter Petre. It was just her day, and she could have landed the prize with ease. But she was off cruising about (revenge) and had a better chance of getting a prize. She was not failed to show to advantage, as had been expected in some quarters, and she was easily beaten by the other two in her class. The second prize was won by the cutter, which was a great success. It seems a little too much of the washboard order to make a going boat, except in very light winds at low speeds, when form does not count for much and sail area for a great deal. The last of the race was the old-fashioned length affair, and under it (Glen receives great favor in the way of large prize. When made a prize, it was a new rule to sail by the cutter, but her chances with her class in a breeze do not seem over bright.

For the rest, the classes were filled with shifting, ballast boats and the best we can say of the class is that all but one kept right side up for the day. The black sheep was Hornet again. The poor thing tumbled about, jumping around, Mattie and the cutter, and the cutter, and the cutter were Rabbed out by boats at the scene of collapse and sent to dry. All hands got in a fair order, though the usual average of slow coaches has to accept a handicap of the slow making. It was about a dead beat to the Execution mark and the 4-4 broke tracks working out. Grace with jib and sail soaked up slowly on Fanny, the latter with a hunched posture, to the star, being unable to follow suit, and tacking around, bore away for Mattiecock in the lead. Crocodile had slain herself a good one to windward and came to the mark with the weather berth to her class. Varuna and Amazon had left Glen hopelessly in the short beat down. Oriana had worked up through the rest of the athletes of the small fry and was first to the mark, and she was the only one to get a prize. The cutter, Zee, with Mr. Sanderson at the stick, followed a minute later and Ada, one of the crocodile's, the baggers, brought up the rear for want of courage and speed. The cutter, Zee, with Mr. Sanderson at the stick, followed a minute later and Ada, one of the crocodile's, the baggers, brought up the rear for want of courage and speed. The cutter, Zee, with Mr. Sanderson at the stick, followed a minute later and Ada, one of the crocodile's, the baggers, brought up the rear for want of courage and speed.

Grace, 11:28:50; Fanny, 12:04:55; Rover, 12:04:55; Fanta, 12:04:55; Crocodile, 12:05:30; Schenker, 12:06:30; Waco, 12:07:30; Varuna, 12:07:30; Amazon, 12:17:30; Oriana, 12:17:30; Zee, 12:17:30; Fanta, 12:17:30; Crocodile, 12:18:18. The rest followed at short intervals. The breeze freshened, and spinners to starboard lifted the yacht about at a flying rate. The cutter, Zee, with Mr. Sanderson at the stick, followed a minute later and Ada, one of the crocodile's, the baggers, brought up the rear for want of courage and speed. The cutter, Zee, with Mr. Sanderson at the stick, followed a minute later and Ada, one of the crocodile's, the baggers, brought up the rear for want of courage and speed. Fanny wins in class C subject to protest, and takes Lanner cup for the year. Fanta wins in class I, and also takes Gould cup. Schenker wins club prize in class II, Amazon in class III, Orion in class V.			

# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, JULY 19, 1883.

VOL. XX.—NO. 25.  
Nos. 39 & 40 PARK ROW, NEW YORK.

## CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be considered. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

## SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States and Canada. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samson Low, Marston, Searle and Rivington, 188 Fleet street, London.

## ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

Address all communications,

Forest and Stream Publishing Co.  
Nos. 39 and 40 PARK ROW, NEW YORK CITY.

	ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, and kindred subjects, than is contained in all other American publications put together.

## ON THE EVE OF THE MATCH.

TOMORROW and the following day are the dates set for the match between the American and British teams at Wimbledon. Each team has been most carefully selected, and the two dozen men will embrace the pick of the thousands of civilian marksmen on both sides of the Atlantic. The match promises, at this writing, to be a close one, for since the arrival of the American marksmen in England they have been very diligent in their range work and the scores have been such as to lead Colonel Howard to express his opinion that the team under him is in good form and able to do its best on the match days.

There certainly is little difference in the excellence of the weapons employed. If the Americans have not been able to make rifles in every respect equal to the English arms the odds are so little in favor of the British arm that they are hardly worth considering in anything but a careful bench test. The British riflemen are individually vastly superior to the Americans in experience over many ranges and under every possible condition of wind and weather, so that taking such a measuring unit as the average of each man's shooting for a time past the British aggregate might run the higher, but if Col. Howard's assertion that his men are working in good trim means anything, we understand that the men are in a condition to help each other in every way during the progress of the match. In this way, and in this way only, is the match to be won. That the men help each other is not of itself a warrant of a victory, but it is very certain that, taken from first to last, the individual members of the American team are not the equals of the British shooters, and only by a well organized system of co-operation can the Americans successfully cope with the home team.

While the match and its results is in itself of comparatively trifling importance, yet in its consequences, direct and remote, it is an event of more than passing moment. It would be a thing of vast value if the American public could

understand just what the Volunteer movement in England amounts to. It can be studied to advantage by the authorities of every State, and the people of the United States would not regret the time and money spent in building up such a reservoir of passive power in case misfortune ever required the throwing of a body of armed men into the field. With such a force of semi-trained civilians to pick from there would not be that scrambling about for available men which has marked the formation of every American team thus far. But entirely apart from team formation, the possession by the United States of such a body of men would be a wonderfully effectual guarantee of peace and safety from invasion, and if the present match will in any way lead to the bringing into existence of such a body, it will be worth all the expenditure of time and money which it has cost.

## THE SPORTSMAN AS A GULL.

ATTENTION has frequently been called, in the pages of this journal, to one of the growing abuses of the time, the luring of sportsmen by hotel proprietors into regions where there is neither game nor fish. The summer resort landlord and the farmer, who takes "city boarders," both put forth their mendacious and alluring advertisements of "good fishing in the vicinity," and "game abundant," when, as a matter of fact, there may be no fish, save minnows, within ten miles, and the only game is the mal-odorous skunk or the burrowing woodchuck. Many sportsmen, misled by these lies, make long and expensive journeys, only to find themselves most abominably sold.

We know of no sufficient course of action to remedy this evil. It is little satisfaction to "show up" the unscrupulous "hosts;" that does not give one back the wasted money and time. A very good rule is to write personally to the advertisers of these range fishing and shooting resorts, and obtain from them in writing an explicit statement of the case. It is often the case that a man will lie in an advertisement to the general public, when he will hesitate to put the same deceptive statements on paper in black and white, over his own signature, for which he may be held to a personal accountability by the victim of his greed. The sportsman tourist is wise in his day and generation who thus provides himself with the documentary evidence which, in the event of disappointment, may serve its useful purpose in fixing the blame where it belongs.

## FORESTRY.

IN another column we give a report of a meeting held to organize a society to preserve the Adirondack forests. It is an organization much needed, and one which will commend itself to all who love out-door life, as well as to those who look upon it from the utilitarian point of preserving a great water supply for our aquatic highways. In parts of Europe forestry is a science, and officers are appointed by the governments to supervise the forests; and only judicious thinning of young trees and the cutting of those which have attained their growth is allowed, and we understand that this law applies to tracts of woodland owned by individuals, the theory being that the individual will pass away, but the forest must remain forever. Such laws would be unpopular to many here, but they would work well for the people at large. A man who can only live a hundred years at most is allowed to buy a tract of land in the great water producing region of the State and for his own pecuniary benefit render it forever sterile.

The State was too anxious to sell Adirondack lands at an early day, in order to get some one to pay taxes on them. Lands were sold in great tracts at a price often as low as five cents per acre; the timber was cut off, and then the lands were allowed to be sold for taxes and finally came back to the State. In consequence of this there are isolated tracts of State land scattered all through the wilderness; and in some cases the State has an individual third interest in lands on which the other two owners can cut the trees, but from which the State derives nothing. These State lands are regarded as free plunder by some lumbermen, and a sort of squatter sovereignty has been established in some cases where lumbering and bark-peeling have been carried on freely.

The new association deserves the support of all interested, and we hope that names of new members will flow in to the secretary from all who love the woods. His address is, Mr. Verplank Colvin, Superintendent Adirondack Survey, Albany, N. Y. A meeting for further organization and action will be held this fall, when all who are likely to take an interest in it will be out of the woods.

GREAT SOUTH BAY.—The waters of the Great South Bay of Long Island were formerly celebrated for their fine fishing. Hundreds of anglers went daily from New York and other places to capture bluefish, weakfish and other fishes in its waters. For years the people living near it received much money from the angling strangers who came to fish; and they waxed fat from summer boarders, boat and horse hire, bait, etc. But they also allowed nettles to take the fish, in open violation of the law, and failed to support those who protested against it. Mr. Roosevelt, of the New York Fish Commission, was one of those who protested some years ago, and the netters convinced him that he was in error by boring holes in his yacht and other arguments of a like character. Now the fishing is ruined, and the angler who goes there not knowing this fact soon leaves for Barnegat Bay, or other good locality, and the hotel keepers are in mourning. True, a society has been formed to correct the evil, but they are late, and it will take them years to repair the mischief which has been steadily exhausting the fisheries for the last decade. It seems to us that the Long Island Railroad, which has derived its share of benefits from the traveling anglers, should help this new association to preserve the fisheries of this great natural feeding and breeding ground.

AMERICAN WOOD POWDER.—In reply to several inquirers respecting our opinion of the powder manufactured by the American Wood Powder Co. of this city, we repeat what we have said before. The manufacturers of the powder, when they first brought it out, stated that they had succeeded in overcoming, by the process of manufacture, the objection we urged against the Dittmar powder, namely, its liability to detonate. The strength of their claims could be tested only by a chemical analysis of the powder. This we at once instituted, putting samples of the powder into the hands of an eminent chemist for that purpose. Circumstances have delayed his reporting to us. Pending this report we must decline to give advice in the matter. We prefer to treat such important subjects thoroughly, believing that the interests of all concerned—particularly those of the consumer—demand intelligent consideration instead of a hasty and therefore premature passing of judgment.

THE U. S. FISH COMMISSION.—Prof. Baird is now at Wood's Holl for the summer, where the scientific portion of the commission is at work on sea-dredging and general marine investigation. The menhaden investigation by the Senate committee, consisting of Senator Lapham, of New York, Senator J. F. Morgan, of Alabama, and Senator Call, of Florida, is at Cape May. Col. McDonald, one of the brightest and best fish culturists that this country has produced, is with the committee, representing the commission. The question is a very vital one, and one that anglers take a great interest in. We will look for the report with much anticipation.

RAINBOW.—Speckled beauties—trout. Crimson beauties—snappers. Green beauties—bullfrogs. Brown beauties—woodcock. White beauties—polar bears. Blue beauties—disappointed belles. Red beauties—Irish setters. Black beauties—crows. Liver and white beauties—pointers. Crushed strawberry beauties—sunburnt anglers. Rusty beauties—gun barrels. Yaller beauties—Ki-yis. "White, black, and read all over" beauties—FOREST AND STREAM pages.

THE GAME PROSPECTS for the approaching shooting season are very satisfactory. The birds are recovering from the decimation wrought by the severe winter weather of 1881-2, and where they have been fairly well protected from illegal shooting will afford good sport in the fall months.

LOGIC IS LOGIC.—"That Office Boy" says that a man who will kill game out of season will not scruple to kill his fellow man as well. This is, we must confess, a pretty severe statement, but the suggestive point is that out in Colorado the "Boy" has found facts to sustain his proposition.

THE G. A. R.—Target practice, carefully conducted, is getting to be a feature of the many G. A. R. picnics held. The "old uns" show considerable skill with the improved weapons of to-day, and always manage to boast of much more than they accomplish.

WILL CORRESPONDENTS PLEASE OBLIGE US by directing their communications to the Forest and Stream Publishing Co., and not to individuals. The annoyance caused by non-compliance with this request is constant.

The Sportsman Tourist.

CAMP HENDERSON.

A SONG to the jolly old camp.  
The scene of full many a lark:  
Alone in the grave-solent wood,  
The fire flickers weird in the dark.  
The coffee-pot sings in the coals,  
Above rises a shadowy owl,  
A frog hearteily croaks in the pool,  
A chord to the woe's distant bowl.

Some vent on cooks on a spit,  
The deep skillet savor of eels;  
Hark! yonder come "Rustus and John,  
The bulls of the day in their creeds,  
The onagers their viands disgorge,  
With zest the attack is begun;  
We eat as if famished for weeks,  
The forest resounding with fun.

Seest hemlocks who strew by the fire;  
On these our dried limbs find repose;  
With blankets drawn 'er us we sleep  
The slumber true weariness knows,  
Mosquitoes and punkies may swarm,  
And grandaunes may prate of the damp;  
We'll laugh all such terrors to scorn  
And sing to the jolly old camp.

LEW VANDERPOEL.

WESTERN NORTH CAROLINA.

NO tourist can pass through the mountains of North Carolina without being impressed with the magnificence of the climate and scenery, and made sensible of the justice of the boast of its inhabitants, that it is the "Switzerland of America." I shall not attempt to describe any of the lovely spots which have called forth enthusiastic admiration. Those who desire to obtain accurate information of the climate, scenery and physical attractions of Western North Carolina are referred to Miss Fisher's book entitled "The Land of the Sky," and to the sketches on the subject in *Harpers Magazine*, by "Porte Crayon."

It is my design, by this article, simply to invite attention to this locality as a game resort. There are localities off from the beaten tracks, such as Watauga county, which it is difficult for the tourist to reach, but which, it is said, present to the lover of nature and sport, attractions not to be found elsewhere east of the Western North Carolina line. The forests abound with game, and the clear cold streams are filled with trout. The most accessible spot in these mountains, which the sportsman can make his headquarters, is the Warm Springs, in Madison county, near the Tennessee line, and from which place I am now writing. Celebrated as a resort both for pleasure and health, it is beautifully located in the midst of the mountains on the far-famed French Broad River, and is reached by the Western North Carolina Railroad which connects with the Richmond and Danville system at Salisbury, and with the East Tennessee, Georgia and Virginia systems of railroads at Morristown. The drawback consists in the exorbitant charges which a sojourner at the Warm Springs is sure to find on his bill. Niagara is no worse. But if satisfactory arrangements in this regard can be made with the hotel proprietors, the sportsman will, in all other respects, be charmed. According to the reports of the servants, like the colored servants generally found at public places all over the South, are excellent. It is the greatest mistake in the world to suppose that white servants are superior to colored servants found in the South. When, in this great republic, a white person becomes a menial, it seems to degrade him in his own estimation, as it certainly does in the opinion of others. He even resents the idea of being called a servant, but insists that he is only a "nigger." The colored citizen upon the contrary, when he becomes a servant does not object to being called one, provided you do not call him a "nigger." The latter term he regards as the greatest of insults. And so far from being lowered in his own, or the estimation of his fellows, by going into service, the reverse is true. If his employment be one where he has some authority, confidence or trust reposed in him, he feels elevated, and seldom reluctantly found him at home as no more thorough aristocrats than are frequently met with among the colored menials of the South.

Upon inquiry I was informed that Tom Coulter was regarded as the great authority upon all questions relating to the chase in the neighborhood of the Springs. Tom is a colored man, and resides in Green county, Tennessee, about nine miles from the Springs. He rode over into Tennessee to see him, and fortunately found him at home. Like most of his race, he is polite and accommodating, and has far more than ordinary intelligence. He was formerly a slave, and is now fifty-three years of age, and lives with his family on a comfortable little mountain farm, which he has bought and paid for since the war. He keeps a pack of hounds, and from and after the 15th of July of each year, having secured his crops, he stays at the Springs during the season to hunt with and guide the guests. There is not a foot of ground in a radius of thirty miles around his house with which Tom is not familiar, and notwithstanding his age, he can tramp over the mountains following his dogs from daybreak and until dark, and always keep within hearing. He exhibited a number of trophies of the chase, and gave me a full account of all game, and the haunts of the same, in the neighborhood.

Beats are numerous, but owing to the lofty and precipitous mountains and the dense growth by which they are covered, it is almost impossible to catch them or bring them to bay with dogs. Started near the Springs, they often make for the Black Mountains, the highest mountains east of the Rockies—Mount Mitchell being higher than Mount Washington in New Hampshire—a distance of over thirty miles. But large numbers of bears are caught in traps and pens. Tom himself has caught since the war twenty-three bears in pens. These are built of hewed log ends, about four feet deep, four feet wide and seven feet long, with a door of the same hard and heavy material, so constructed as to fall when the bear enters and takes the bait. If any other materials are used except the best locust, the bear will be certain to cut out. These pens are much better than steel traps.

There are a good many deer in the neighboring mountains, but there are more in the groups known as "Cow-Bell" and "Spring" mountains than in any other. When started on the north side of the French Broad River, the deer generally run through Courtland's farm, and cross the river at certain

points between two and four miles below the springs. Hunters taking stands along the river at these places are almost sure to obtain a shot if vigilant. There are now on the mountains embraced in the Courtland farm a herd of fine bucks. The does have fawns at this season. They fawn about the last of June, and by the fifteenth of July the fawns are able to shift for themselves. The laws of North Carolina afford the poor deer no protection whatever, as I am informed. Tennessee has game laws, but they give the game no protection near the North Carolina line for obvious reasons.

Within a few hours' ride from the Springs is the Clifty-fork range of mountains in Cocke county, Tennessee. This is a famous bear region. It is on the northwest side of the French Broad River, and covered with dense thickets of laurel and briars, affording to bruin an almost inaccessible retreat.

Brush Creek Mountains and flats, nine miles west of the Springs, is a favorite resort for deer. When started in these mountains they almost invariably cross the river at the mouth of Brush Creek, which is therefore an excellent stand. Four miles above the Springs is Walnut Mountain, upon which there are a great many deer. When started they cross Laurel Creek at two points, from which they may be easily killed. Laurel Creek is a large and beautiful stream emptying in the French Broad four miles above the Springs. Many of the streams flowing into and forming the Laurel are filled with trout, which, though small, seldom exceeding ten inches in length, afford excellent sport.

On the south side of the river, and emptying into it at the springs, is a large clear stream called Spring Creek, which takes its rise in the Bluff Mountain range, some ten miles from the Springs. On the head waters of this stream and of Big Creek, many of the streams flowing into and forming the Laurel are filled with trout, which, though small, seldom exceeding ten inches in length, afford excellent sport.

Since the railroad has been built along the river, the deer and other game have been driven further back into the interior, but are still plenty in the mountains near the Springs.

Wild turkeys, pheasants, ruffed grouse and partridges are abundant. Occasionally eagles may be seen. They build in the inaccessible cliffs near the rivers and creeks. Of course, there is other small game, such as rabbits, squirrels, etc.

Owing to the splendid warm baths at the Springs, which are favorable to the sportsman afflicted with rheumatism, no money is demanded for the use of the Springs. The colored citizens, during the autumn and winter months, provided he can obtain board on reasonable terms. From November until January is the time to come here to hunt, when the deciduous trees have shed their leaves, and the mountain air is crisp and bracing.

The "sportsman tourist," by going only two miles from the hotel, may get into the hunt, and enjoy the loveliest of scenery on the mountains. Wildcats and catamounts are numerous, and are often killed.

The tributaries of the Laurel are the only streams near the Springs in which trout are now found; but black bass, redhorse, cats and other fish abound in the French Broad and all of its large tributaries. Gray and red foxes are found in such numbers as to afford excellent sport. Tom Coulter and Mr. Surveyor have each a pack of hounds, and are always ready and willing to lend their services to the sportsman. Indeed, every one about the Springs is polite and accommodating, and outside of the hotel, charges are reasonable enough. Like most men of his habits, Tom Coulter is good-natured and amiable, and delights in all kinds of hunting, whether for rabbits or for bears, and has at his tongue's end any number of incidents connected with his sporting experience wherewith to beguile away a tedious hour.

I had the good fortune to meet at the Springs Col. Thomas Steele and his son, of Little Rock, Ark. All readers of the FOREST AND STREAM are probably familiar with his name, as I have often seen it mentioned in connection with his hunting tours in the Rocky Mountains. He is a large planter and an enthusiastic sportsman, and having removed to Arkansas in 1855, remains there, where he has been truly a sportsman's paradise. Scarcely a season passes that he does not go on a camp hunt in the Rockies. Having, therefore, such varied experiences as a sportsman, and being a gentleman of fine sense and attractive though plain conversational powers, it may be readily imagined what a treat it is to sit and listen to his relation of his sporting adventures, especially when given in his quaint and original style. We have hoped to meet him here, when we learn he is somewhere in the mountains. I trust he will be inspired thereby to give us soon another of his entertaining letters. I desire here to return my thanks for the kind invitation extended by him to me and others of the fraternity, through the medium of the FOREST AND STREAM, to visit his home in Rockingham. Not only from some of his numerous kindnesses for he belongs to a family having probably a more extensive connection than any other in the South, but we learn I have earned of the hospitality to be met with under his roof, and I hope at no very distant day to be able to find time to accept his invitation.

JULY 7, 1883.

THE ADIRONDACK GUIDES.

I AM no fighter—would rather walk round a block the wrong way to avoid a hawk and let it swoop on my neck, even from my wife. But there are times when I will make a stand for my friends, and show fight in their behalf when, were the case my own, it would probably pass unnoticed.

Now then for the provocation, which is in the following paragraph from a late number of *The Mail and Express*: "Adirondack tourists are already on the march, and the guides have all come to the front with customary rapidity. Tourists are most fortunate who do not have to do with the guides."

You know that I have done a little traveling and camping in the Adirondacks—and your fishing editor has done a little of the same. Now, I know (excuse me for going in front, for it's my right) and you know, that without the aid and assistance of these much-maligned guides, the Adirondacks to many would be an impossibility. There are some who can go all into the wilderness, and pack horses, boatmen and cooks of themselves; can put up with any or no shelter, can digest food cooked poorly or well; can do many things that the guides do for us, and feel all the better for it. Wouldn't I be a proud man if I could do it and live? But I know that's too much for me, and not only for me, but for the

great majority of those who visit and enjoy the grand old North Woods, and are the gainers thereby.

What are we to do when this terrible army of guides fasten their greedy, avaricious, treacherous eyes upon us as we enter their territory? beat it, retreat, and go somewhere else, simply because of these miserable, mean, scurrilous innuendoes flung out in this style? or, will we be manly enough to do as the Children of Israel when Moses, acting under Divine instruction, issued his marching orders, "Go forward!" I have been in the care and keeping of several different guides in the years that have fled, and my acquaintance among them, especially in the Adirondack region, is pretty extensive, and I do not know of one solitary guide with whom I would not share my blanket in any part of the wilderness, and feel just as safe in person and property as I would in the house of any friend in New York city.

They work for pay. So do we all of us, only they give a great deal more work for the money than any class of men I know of. Theirs is an inglorious service—they require brains, and good ones, too. Every emergency or crisis they must be prepared for, and I've seen some of them get caught in tight places, but never knew one to fail or flinch; true as steel, and faithful as true, they do not deserve these slurs and stabs in the dark.

I know that around some of the lakes where large numbers of fashionable people gather, in the large hotels, there exists a class of "hotel guides," who are not to be named in the same breath with the genuine guides. These men, or boys, are brought in from the settlements and farms on the borders of the wilderness, and are employed by the hotels at a certain sum per day for the busy season. The hotel hires them out to the guests, and often the latter are sadly taken in. They may get some one to row the boat for them, but they have no guide; he knows nothing about the forest, the fish, or game to be found; he knows nothing about the woods, and is often simply a lazy, good-for-nothing beat, whose only ambition is to get through his day's work and bleed his patron of all his spare change. "From all such deliver us." They are not guides!

In your issue of May 3, which I read in the woods, your correspondent, "Piseco," relates his grievances in this line, and at the expense of my good friend Robert Perrie, of "The Lake House," and the editor of *The Adirondack*. He was very difficult to convince me that the story he stated by "Piseco." And yet I don't want to say, or even believe, that he would make a false statement, but will suppose that he got a bad bargain, felt very much aggrieved, down on everybody, and had to "boil over or bust." Mr. Perrie's statement is briefly told. "Piseco" came to him at a season when all the guides were engaged, every man of them. He was so informed, and the editor of *The Adirondack* stated that who was able to row a boat, but knew nothing about guiding, and it being Holston's choice, he had to take him or none. He was disappointed in his bargain, as he might have expected, but he would have been wiser and happier if he had passed it by without getting into print.

So much for the guides, and it's all gratis on my part. I love the honest faithful fellows for their merits, and could not hold my peace.

I went into Brown's Tract, via Boonville, early in June, and spent a pleasant three weeks there with my son, and then turned back to my daily round of work, better, fresher, and abler for my toil—brain clear, blood purified, liver cleansed, run infused into my system and "set up" in good shape, warranted to run. Changes have occurred since my last visit; George A. May, the genial landlord of the Hubert House, Boonville, has sold out to George H. Beck, who promises to do his best for the sportsman and visitors to Brown's Tract who may give him a call. Death has made another change; Bart Halliday, one of the old time guides, died late in May and was buried at Boonville. He was well known, respected, and much sought after by sportsmen. He has dropped his paddle and gone over his last "carry," and now rests from his labor.

One other change, and I don't like it, a steamboat has been put upon the Fulton Chain of Lakes. To be sure it is "only a little one," and very slow at that, but, without wishing John Meeker any injury in person or purse, I shall not express my regrets if he finds it profitable to give up the job. The Adirondack boat is good enough for me yet, notwithstanding my little tilt with "Nessunk" last year—he is wiser than his title, let him alone, you can apply that scripture to either or both of us.

J. R. JR.

IN BOSSIER PARISH.

BY GEO. D. ALEXANDER.

ON Friday, June 30, 1883, in company with my esteemed young friend William Mercer, I set out on his hospitable invitation to Clark's Bayou, some eighteen miles southwest of Minden; having prepared myself with everything necessary to enjoy several days of sport in both hunting and fishing.

As we drove over the bridge across the bayou, Mr. Mercer remarked, "The water is in fine condition for catching bass, and just right for using a good troll for black bass." A mile beyond the bridge, however, we were met by Mr. Mercer, unfortunately, was on Red River visiting her sister, but he expected her to return before I should leave. Now he would have to do the honors of the house and act the part of the bachelor.

At his store, near by, I met my old friends Dan Cole and Mr. Bodenheimer; not old in the sense of years, for both are young men and keen hunters and fishers. One of the Minden dealers, George Mr. Sugden, was there also, who joined us the next day in fishing.

Early the next morning we were up, rigging poles, procuring bait, and saddling horses, though our spirits were considerably dampened by fears that the heavy rain which fell during the night would have muddied the water and destroyed the prospects of a very successful fish.

However, Mr. Mercer thought it would be the case, he would return to the store, get some freedmen and his seine, and, by going down to the mouth of the bayou, where it empties into Lake Bisteneau, we should not be disappointed in having as many perch and bass as we desired to eat.

On getting to the bayou, we found it just muddied sufficient to prevent the bass from striking the trolls, yet not preventing bank perch and the goggle-eyed bass from coming.

I tried several general purpose trolls, but not a bass would strike. In huge disgust I laid those aside and tried the minnows. It was as unsuccessful as the trolls. Then I gave it up as a bad job, and turned my attention to fishing with red worms and sawyers for perch, which Mr. Sugden was rapidly pulling out and filling his sack.

Mr. Mercer did the same. An hour's work had filled our

sacks, and we returned to the house to have them prepared for dinner. His cook, who, by the way, is splendid in browning a fish just to suit my palate, and baking a corn dodger, which, next to an ash cake, I love above all sorts of bread, had cooked the fish to suit me to a T, and I did enjoy my dinner. Mr. Mercer has the largest quantity of cattle of anyone in Bossier Parish, among them some of the best milk cows, and no odd to fine butter and cool milk. How I did enjoy these after being cooped up in a town for a year!

That evening a big chill caught me, and I could not accompany Cole and Suggen to go higher up the bayou, where they thought the water would be clear and the chances good for catching bass and goggle-eyes. They returned in time for having the fish cooked for supper, with a large number of each kind, reporting the fishing as superb, it being almost impossible to let the troll strike the water before a fine, fat bass of some two or three pounds striking it. Goggle-eye bit as fast as the hook could be baited and thrown in the water.

This was all pleasant to them, but poor me! I had shaken the bed nearly down with a chill, and when they brought the fish to my room to show me, I was burning up with high fever.

Sunday, July 1.—I got up, dressed, and felt better, but staid in-doors all day.

Mr. Mercer said, as it was now lawful to hunt deer, we would go hunting early Monday morning.

Monday Morning, July 2.—Ate a hearty breakfast by sunrise, and then mounting Dora, Mr. Mercer's fine saddle mare, with him, Cole and two freedmen, proceeded to our stands about a mile and a half from the store. The deer had been coming every night into his cotton field just before the house, and then laid up during the day in large pieces of woods nearly surrounded by fields. Cole drove, he had two good hounds. I went with Carey Porter, a freedman, to show me my stand, while Mercer and Adam Turner, a freedman, went to stands beyond ours. Carey had barely time to place me at the proper place, before I heard the full and bounding direct to my stand. In a few minutes I caught the outline of a deer's ears as he sprang into the path some seventy-five yards from me, and stopped, but behind some pine trees, and at the same instant, a plagued red cur bounded across the path between the deer and myself. It was done so quickly that I was in doubt whether it was a dog or a fawn, until in a moment it returned direct to the little deer and drove it back into the drive. The two hounds came out, ran across the path, and a circuit coming up to me, and just then I heard the cur open a few times, not less than a quarter of a mile on the drive, taking the deer, as I thought, to Mr. Mercer. The cur was running it so close that the animal took a thicket, and though passing quite near Mr. Mercer, he did not see it, and then left on quick time for Red River bottom.

To say I was mad would not express my feelings. I was furious, and I declared I would kill that dog as sure as I should lay eyes on him in the live.

Cole blew back the hounds, and went to stands inside of the same drive. Mercer told me this same cur had kept him over twenty times from killing deer, just as he did me, that he belonged to a worthy freedman who lived not far from his store, and when the dog heard the horn of the driver, he would come to him or the drive, and act just as he did this morning.

After I took me to a stand and then went on to one further down the road, the freedmen being left at the stands I and Carey Porter had filled.

Not thirty minutes passed before I heard Cole bawling very lustily to his dogs, and then they broke into full cry. Soon he blew his horn many times and succeeded in getting the dogs back to him. He was blowing, shouting, and making as much noise as the first locomotive makes on coming to a rapid stop. West for the first time, when two heavy shots in rapid succession broke the stillness, and then came an indistinct cry of a dog in pain, and next the wailing of both dogs for half a minute. Then all ceased, and the three long blasts of the horn notified me that a deer was killed, and I should ride up.

Cole was not over a quarter of a mile from me, when he shot, and as I came up both of the freedmen and Mercer rode up. I saw a beautiful fat young maiden doe lying dead with her hind legs broken in several places, and several shot piercing both hams. He had made a splendid shot as the deer got up before him in very thick bushes, and he only caught a glimpse of it as he shot.

He rather evaded a reply to my asking him "did he kill it with the first or second shot?" He was in fine spirits, more lively than usual. It was not over half a mile to the house, and while going along back home he informed me, "that red cur would have bitten my legs broken in several places, and that the cur that ran in before him as the deer lay down."

We had not been absent two hours from the store. The milk and liver being favorite parts of a deer with me, Mr. Mercer sent them to the cook, to have them prepared in the best manner, and did I not enjoy them? It had been eleven months since I had eaten any venison, and this was 91st Mr. Mercer's.

Soon after dinner I was taken with a regular old fashion ague and chill. I have rarely suffered as much before as I now as I did with this. Nevertheless I managed to eat a double portion of the delightful venison. The cook had stewed the ribs until they were thoroughly done. I ate an enormous quantity for a sick man.

The next day I laid up all day, swallowed not less than four grains of quinine, sweated myself nearly to death, and rose the next, bright and refreshed, ready for another hunt. July 4.—Mercer could not go hunting, but Cole went with him. He got several freedmen to accompany us. Among them were Carey Porter and Henry Johnson. This last was one of the best negroes, Mercer said, he ever knew. He certainly had one of the most pleasant and honest faces I ever saw. Mercer told me, "he would believe him as quickly as any white man in the country, and he would credit him as soon as any one the amount he asked for."

One of the finest specimens I saw of the negro race, about six feet, two inches tall, black as a crow, well proportioned, and having a face that one does not tire in looking at. Honesty, fidelity and bravery were stamped on every lineament. He was the body servant to young Jack Hodges, an older brother of my son-in-law, Lawson K. Hodges, and had accompanied his young master at the opening of the new field of Mammas. There young Hodges was killed, and when it was told Henry, the poor negro nearly went crazy. Some of the company told him his young master was left dead on the field of battle. The negro broke from camp, traversed the whole field, turning over and scanning every dead body, until he found him.

Lifting him gently in his great arms, he bore the body back to camp. He could get no coffin to place the body in, but as he told me, "he borrowed a saw, and he stole some planks from a quarter-master, and made himself a rude coffin in which he placed the body, and then digging a grave, he buried by himself the loved form of him whom he loved as a brother, and then he made his way back to his old master's home, near which place was the same land, he now lives. He owns his own farm, has a good gun, plenty of horses and cattle and hogs, makes good crops, and owes no man a dollar."

Who will deny that a negro is not faithful, and to be greatly praised under such circumstances?

But to return to our hunt. He made three drives in succession, without getting a start. Ordinarily, Cole said, "he could start twenty deer in the woods we hunted." It was getting excessively hot, and we went to a spring to get some water. While there, I was struck with a quaint remark of Carey Porter. Said he, after swallowing nearly a gallon of water, "It is too hot for white folks, too hot for hounds, but is just right for niggers."

How true is this in such a latitude and at such a season of the year!

After our hunt I seen the freedmen so well off as in this Bossier Point, and I am certain I have never seen a more quiet, orderly and respectful body of colored people. All are doing well. You never hear of any fights and quarrels. And I am certain that even in slave times one would not have found the negroes more respectful and law-abiding.

After cooling at the spring, we proceeded to beat across an old field, before taking another drive.

Cole was riding a little in advance of me, to my left. Henry Johnson was in the center, but in advance of me. We were passing a little cluster of sumac bushes, when I saw Henry lower himself on the neck of his horse to look at something, and then exclaim: "Daris a deer: shoot him." Up bounded a beautiful fawn, and then it stopped a moment and ran on my right. I could not shoot, but rode a step or two to give Cole a chance to shoot, when he lay fly both barrels from the left shoulder, but did no damage. The terrified little creature ran some forty yards and stopped. By this time I had turned Dora to the left, which gave me a beautiful chance to shoot; and as I brought down the heavy Moore & Son gun, weighing some eight pounds, the mare's head went up and down quicker than a die-dapper duck. The gun was so hard on trigger that I could not keep it on the deer, and I fired at random, only frightening the beautiful little terrified creature. It bounded off unharmed, and I was glad of it.

The hounds ran in for a mile or more and then lost it. On returning home, Henry told us "he could not die happy unless he told the truth about this little deer, and that was, he was so excited he forgot he had a gun, and wanted us to shoot it."

This ended our hunt. I did not have a chill, and I did, indeed, enjoy the eating of the deer we killed the day before.

After our railroad is completed, the hunter who loves both fishing and hunting, can have much of both as he wants by going down into Bossier Point. And should he be so fortunate as to make the acquaintance of this most hospitable and genial gentleman, William Mercer, he will never regret a sojourn at his residence.

The next day I returned to Minden, to find all my fine chickens dead with cholera or some other fatal disease, and my fine bitch, Princess Louise, the gift of Mr. J. O. Donner, of Brooklyn, so dead, that she would not come to me, and had left home to take up with a neighbor.

MINDEN, LA.

## Natural History.

### THE COMMANDER ISLANDS.

[CONTINUED.]

I AM unable to send you at present a full description of the islands, as my sojourn here has scarcely exceeded three months. The following pages will contain merely some disconnected sketches of those things I consider to be new or of special interest. You will see, besides, that they are, with a few exceptions, new to the world, and, as this, of course, has been the main object of my studies and observations. The collections of marine animals are as yet insignificant.

My stay here has as yet been too short, of course, to allow of exhaustive generalizations with regard to the zoological relations of the islands, the more as I have been able to identify with certainty only a small portion of the animals which I have collected. But I shall hesitate to state that the character of the land fauna is palæarctic, as it has been supposed to be. Such being the case, you will not find it surprising that the faunal character of the island agrees more or less with that of Kamtschatka.

The islands during the period previous to which they received their present fauna and flora were totally covered by the sea, and that since that time they have not been connected with the mainland on either side. From this it would follow that the fauna and flora occurring here are true indigenes. They evidently immigrated, especially in more regularity from the west, from Asia, by means of prevailing winds, currents, and the driftwood carried by these, and more accidentally from the east, from America. That the inhabitants, more independent of those circumstances, likewise show nearer relationship to the Asiatic fauna is partly due to the shorter distance, this being only 100 miles from the nearest cape of Kamtschatka, Cape Kronotski (which by the Russian man-of-war Vestnik, this year, has been found to be situated twenty miles more to the westward than given in the charts), while the nearest island of the Aleutian chain, Attu, is twice as far off; and partly to the effort of the Asiatic fauna to extend beyond its own limits. It is a well-known fact that the Asiatic fauna is in a continuous and comparatively rapid motion toward the west, especially in northern Europe. But it seems to me that a similar movement takes place in the eastern part of Asia, only in an opposite direction, the proof of which I find in the not inconsiderable number of exclusively palæarctic forms in Alaska, especially among the birds. I here enumerate only *Cyanocitta*, *Scolecia*, *Phylloscopus*, *Pyrrhula*, *Parus obsoletus*, *Cab.*, etc.

It is true that the zoogeographical regions overlap each other, and their boundaries are not really definite, but that America contributes but very little to the fauna of the islands, and that here we will detect still more Asiatic forms in Alaska, and that hereafter it will be necessary to register as

residents such species which at present are known only as temporary or casual intruders.

The occurrence of species peculiar to the islands (and I have no doubt the final revision of the material collected by me will make known several new ones) will not invalidate what I have stated above with regard to the want of indigenous animals and plants. Their origin is due merely to variability in connection with isolation and time.

As to the plants I shall be very brief, as I am not a botanist. I limit myself to the remark that I find the general character of the flora very much like that of the treeless regions of Northern Europe, the most discrepant features being the splendid *Rhododendrons* (*kamschatkicum* and *chrysanthum*) and the Saranina lily (*Pritularia saranina*). Still closer, of course is the resemblance to the plants of Kamtschatka, especially to those in greater altitudes. The plants of both islands are, I think, identical, but the manner of their immigration very likely has caused the occurrence of some species in one island which are absent in the other. Thus I have from Copper Island a very small but conspicuous *Viola* with yellow flowers (much resembling the yellow variety of *V. tricolor*), a plant which I found also in Petropaulski, but not here on Bering Island.

The islands are completely destitute of trees, unless one might be compelled to term so the shrubs of *Salix*, *Sorbus* and *Rubus*, from six to eight feet high, some of which obtain a proportionately great thickness close to the ground. Thus, for instance, I have a section of a birch with a diameter of two inches.

The vegetation, especially in the valleys, is very luxuriant, in most places of a man's height or more. This exuberance is especially due to the rich soil in connection with the extreme moisture, for the temperature during the three months, during which the plants have now been growing, was not high. My observations show a mean of 42° F. for January, 48.2° for July, and 54° for August. The minimum temperatures for the same months are 31°, 39°, and 44° F., respectively. In higher latitudes the length of the day and the intensity of the light produce the same effect, but as we live here in latitude 55°, under a sky generally overcast, we do not find the same conditions as we should there.

Of land and fresh-water invertebrates I have collected only some specimens of worms, mollusks, and arthropods. The worms are represented only by a species of *Lumbricus* and by two *Helodina*.

The mollusks are more numerous, including one bivalve and two or three pond snails, seven land snails, and one slug. Among the land snails there are several extremely small *Helix*, scarcely larger than a pin's head, some of which I suspect to be new. They are surely not the young of the larger kinds, of which I possess young ones, also of the same size, except a medium-sized *Limacina*, and with the same exception they are not very numerous.

Of myriapods I have found only a few species, while the spiders have yielded a richer harvest.

As a rule the winged insects seem to be more numerous, with regard to both individuals and species, which is also the case in Petropaulski. In the first place, the mosquitoes make themselves very conspicuous. Although not quite so large, large numbers as in Kamtschatka, where the furious attacks of their legions sometimes prohibited me from securing a bird I had shot, and usually a valuable one, even here on the island they seriously interfere with the duties of a collecting naturalist. The diurnal lepidoptera seem to be very scarce. I have seen only a single one, early in the season, a *Pieris*, first of May; it was a butterfly, much like, if not identical with *Pieris arcticus* L., but unfortunately the chase was unsuccessful. My lookout for some species of *Argynnis*, *Erebia* or *Tieris* has been completely in vain. The *Notula* are not very numerous either, while the *Geometridæ* and *Microlepidoptera* are more common.

The beetles are not numerous, including up to date only one or two *Carenidionæ*, one or two *Elateridæ*, one *Silpha*, some *Staphylinidæ*, *Dytiscidæ*, *Gyrinidæ*, *Curculionidæ*, and a *Grindellæ*, which I have seen at only a single place, although it is a conspicuous species.

Of crustaceans the fresh-water ponds have yielded a *Branchipus*, some *Gammaridæ*, one *Daphnia*, and one or two other almost microscopic species, which, I think, belong to *Cyclops*.

I can hardly write anything about the fishes inhabiting the rivers and lakes. It will be better to postpone this topic until next year, and I shall limit myself to a mere enumeration of the species observed by me up to date, viz., *Gasterosteus aculeatus* L., *G. ephippium* (Pall.), *Salmo gairdneri* (Pall.), (called *Golez* by the natives here), *Oncorhynchus lyodon* (Pall.), (Russian *Krasnaya Riba*), *O. tshawytscha* (Pall.), (Russian, *Kislozh*), *O. pinnatus* (Pall.), (Russian, *Gorbushka*), and the "*Bajdarski*" of the natives, which I have not yet been able to make out. "Sik" is the Russian name of *Gasterosteus*, but I do not believe that it belongs to that genus, as the mouth extends beyond the eye. Probably it is the same species called *Gasterosteus* by Nordenskiöld (Vega Expedition, American edition, page 618), as I do not know any other one to which to refer this name; the three other species of which he speaks are *calcaratus*, *lyconotus*, and *proterus*.

In my next report I hope to be able to add another Salmonid to the list of the species known (as I suspect the occurrence of such a one).

Batrachians and reptiles are wanting altogether on the island, as might be expected. Dr. Dybowski and I have been searching very eagerly for a *Salmonastrula*, as we suspected the "*Krugoni*," of which the natives told us, to be such an animal. It turned out, however, to be a large *Dytiscus*.

The ornithologists starting for Bering Island will probably prepare themselves beforehand for hunting and collecting two large, rare, and interesting birds, viz., *Halobastur* (Pall.) and *Phalaropus perspicillatus* Pall., as Pallas, on Steller's authority, gives Bering Island as their habitat, where they occurred in abundance. You will not be more disappointed than I am in learning that there is no hope whatever of getting a specimen of the latter, and very little of obtaining any of the former from Bering Island.

It is not to be doubted that the *Phalaropus perspicillatus* does not occur on the islands at present. The next year, however, remember very well the time when it was plentiful on the rocks, especially on the outlying isle Ar Kamen. About thirty years ago, they say, the last ones were seen, and the reason they give why this bird has become exterminated here on the island is that it was killed in great numbers for food. They unanimously assert that it has not been seen since, and they only laughed when I offered a very high reward for a specimen.

When Pallas gives Bering Island as the habitat of

the *Thalassidroma* I feel tolerably sure that he has misunderstood Steller's words, or that Steller, if he really has reported its occurrence, met with only a stranger from Kamtschatka. The former supposition seems to me to be more probable, for the reason that Steller, in his description of Bering Island, does not mention this eagle.\* He, however, speaks of an eagle in the following terms: "Von seltsamen, an der sibirischen Küste nicht gesehenen Vögeln habe ich dort [Bering-Id.] einen besonders merkwürdigen mit weissem Kopf und schwarzem Hals" \* \* \* "ausgetroffen" \* \* \* "jener nistet auf den höchsten Felsen, und sie haben im Anfang des Junius Junge, die ganz mit weisser Wolle bedeckt sind." This is the same bird of which he speaks in his "Beschreibung von dem Lande Kamtschatka" (1774), pp. 193-194 as follows: "Eine Art unbekannter und sehr schöner Adler, so aber in Kamtschatka viel seltener vorkommen als in Asien und den umliegenden Inseln, daher auch solche hier diese Stunde noch nicht erhalten können. Exist derselbe so gross als der *Haliaeetus*, ganz schwarz, augenommen den Kopf, *Circus* ist, schwarze Füsse und Schenkel, welche so weiss als Schnee sind. Er macht sein Nest auf hohen Felsen, aus Reisern im Diameter von einem Faden einen Schwund dicken, und legt seine Eier gegen den Anfang des Junius, schwach an der Zahl. Die Jungen sind weiss, ohne Flecken, und stehlen die heide von ihren Eltern, da ich ein Bittens Elter das Nest nicht erhalten. Stalt auf mich zu, das ich mich kaum ihrer a dem Stock erwidern konnte. Unerachtet ich den *Pulio* keinen Schaden zugefügt, verhiessen die Alten dennoch das Nest und bauten sich ein andres an einen Felsen wohin niemand möglich zu kommen."

I think there can be little doubt that the bird thus described is a *Haliaeetus leucophthalmus* (Linn.) in spite of the white "highs," which perhaps is only a *leucophthalmus* of a person copying the original manuscript, this being, as we know, only a rough draught of Steller's, in common with the "black feet." The following are my special reasons: 1. The habitat given by Steller agrees exactly with that of *H. leucophthalmus*, while *H. pelagicus* is common in Kamtschatka, and does not occur at all in America; 2. "White high" can only mean *H. leucophthalmus* and not of *pelagicus*, which has merely the forehead white; 3. If Steller had intended to describe the *pelagicus* he would not have overlooked the white shoulders, a much more conspicuous feature than the white forehead; 4. Even if Steller's manuscript contained words "highs white" it would be of little importance, as it seems that he did not kill the bird and only made the description from the living animal. In *pelagicus* the whole plumage is white. The supposition here advanced seems the more plausible, as a pair certainly belonging to this species still breeds in the neighborhood of the place where Steller and his comrades wintered. Besides, *H. pelagicus* inhabits exclusively the dense and large forests, and is not known to rear its young ones in such treeless localities as those of Bering Island. When it occurs here, it is, at present at least, only as a lonely stranger from Kamtschatka, usually a young bird, and it is no reason why this should have been different during Steller's time. I have seen a young bird here, shot on the island, obtained by Mr. Grebnitzky, and forwarded by him to the Academy in St. Petersburg. It was in the same plumage as the young specimen in the National Museum. The measurements are as follows: Total length 910mm; chord of culmen from forehead to tip 55mm; from cere to tip 68mm; radius of curvature of culmen from tip of bill to tip of mandible 84; hind angle of nostril 62; and from this point to fore angle of eye 40mm; height of upper mandible at upper border of cere 37; and its breadth at the lower border of cere 27mm; gony, 29; wing, 630; tail feathers, 340mm; from feathering on front of tarsus to base of middle claw 142; chord of the latter 34, and of its hind claw 44mm.

It will be seen from the above statement that the bald eagle is an inhabitant of the island, but I can affirm that if very scarce at present in proportion to what it has been only a few years ago, judging from the many abandoned nests and from reports of the residents.

But it seems as if a third species of eagles should be added, not only to the fauna here, but even to the list of known birds, for I have never seen a young *Haliaeetus* with the whole lower surface almost white, and the upper side with dark tips, and edged with whitish, from such as my No. 1057. This young female still with black tail was shot on the 15th of May, measuring in total length 890mm (35 inches), with a stretch of wings of 2,220mm (87.40 inches); iris, faint yellowish white; bill, horny brown; cere, yellow, with horny brown shadings on the back; feet, bright golden yellow.

Compared with the young of *H. leucophthalmus* of the same age, it has, quite in contrast with the color of the body, the tail feathers, under tail-coverts, and the under side still darker colored. The size is not considerably less than that of the bald eagle, as the specimen in question represents the largest size of its kind, being no larger than an old male of the said species. The bill is fully equal in size to that of a young *leucophthalmus*, and the feet likewise; but the body, tail and wings are smaller.

I have little doubt that this bird, if more mature would have assumed an almost uniform white plumage below, with white tail, a supposition corroborated by the statement of Mr. Grebnitzky, that he himself once has observed here, on the island, an eagle with a white lower surface and tail.

That we do not deal in our case with an albino is evident not only from the color of the eyes, but the character of the whole plumage would also contradict such a theory. The white color does not appear as an irregularity, and the dark colors are deep and distinct.

Upon the whole, I reach the conclusion that the present bird is sufficiently distinct from *H. leucophthalmus*, and, consequently, also from *H. albicollis* (L.). There are two other species, however, of which I know only the names, viz., *H. leucophthalmus* (Pall.) and *H. leucogaster* (Gm.); but Dr. Schenck, who is acquainted with the former, asserts that this is quite a different bird, while Dr. Henry Wedemeyer, who has been collecting in Central Africa and is quite familiar with the latter, corroborated the same statement upon seeing my bird during a day's visit here. Both received the impression that the species is a new one.

Did I not have the hope that Mr. Ridgway would take the trouble to compare this specimen with those in the National Museum, and describe it if he should come to the same conclusion, I should hesitate to give it a name. But as the collection of birds will be placed in such good hands as his, I think it advisable to wait for his decision.

In this connection I will merely mention some other forms which I have been led to have been hitherto more or less unknown, or wrongly known, likewise leaving to Mr. Ridgway the labor of having them compared, described, and named if he should find them to be actually new.

In the first place I call your attention to the four larks, Nos. 1020 and 1117 from Bering Island, and 1242 and 1249 from Petropaulski, where I found this species, in one place taken tolerably common. The lengths are respectively 168, 187, 184 and 172mm; the bills, dark brown; bill, pale flesh color; culmen and tips of both mandibles blackish brown; feet, light reddish brown; tarsal joint, dark grayish; toes below, livid; nails, blackish gray. It is much like the common European *Alauda arvensis* L., but it appears to me to have lighter and clearer colors. The size agrees very well with that of birds from Northern Europe.

No. 1251 is another passerine bird, thought to be new. It is a kind of willow-warbler, common in Petropaulski, but not observed here on the islands. My only specimen is a male, shot on the 5th of July, 1892. Total length 149mm; iris, hazel; feet, clear yellowish brown.

The loud song, consisting of the syllables *ritshe-ritshe-ritshe-ritshe*, and somewhat resembling the sound made by whirling a scythe, was heard, especially toward night, from all sides of the island, and from the high grassy willows covering the swampy slopes of the mountains with almost impenetrable both to foot and eye. You would very seldom get a glimpse of the watchful songster, when, clinging to the middle of the upright stalk of some high orchid or grass, he did his best in the singing match with one of his own kind or a *Callipepla kamtschatkensis* or a *Corvinus*. But no sooner would you move your gun to secure the long-footed bird, than it would be completely and suddenly as if he possessed Dr. Fortunatus' cap. The only way to obtain a specimen is to watch patiently near one of his favorite bushes, with the gun ready. For hours I have thus sat in the wet swamp, almost desolate from the bites of the numberless bloodthirsty mosquitoes, which I did not dare to wipe off, fearing to drive away my silent bird, who perhaps was watching my involuntary figure until he was satisfied as to his safety. Curious, but still cautious, he would come nearer, slipping between the stems and branches nearest to the ground, uttering a very low, thrush-like *tak, tak, tak, tak*, and with the tail straight upright, very much like a long-tailed *Troglodytes* both in color and conduct. And if I kept absolutely quiet he sometimes would proceed close to my feet, looking curiously at me with his pretty dark eyes. But before the challenge of a neighborly bird attracted his attention and provoked his reply, which he usually began with a short shrill, it would not have been advisable to move a muscle.

Then comes the time to lift your gun very slowly, stopping as often as he suspiciously stops his song, until the crack puts an end to it forever, and you hold in your hand a usually very movable figure until he was satisfied as to his safety. Curious, but still cautious, he would come nearer, slipping between the stems and branches nearest to the ground, uttering a very low, thrush-like *tak, tak, tak, tak*, and with the tail straight upright, very much like a long-tailed *Troglodytes* both in color and conduct. And if I kept absolutely quiet he sometimes would proceed close to my feet, looking curiously at me with his pretty dark eyes. But before the challenge of a neighborly bird attracted his attention and provoked his reply, which he usually began with a short shrill, it would not have been advisable to move a muscle.

Then comes the time to lift your gun very slowly, stopping as often as he suspiciously stops his song, until the crack puts an end to it forever, and you hold in your hand a usually very movable figure until he was satisfied as to his safety. Curious, but still cautious, he would come nearer, slipping between the stems and branches nearest to the ground, uttering a very low, thrush-like *tak, tak, tak, tak*, and with the tail straight upright, very much like a long-tailed *Troglodytes* both in color and conduct. And if I kept absolutely quiet he sometimes would proceed close to my feet, looking curiously at me with his pretty dark eyes. But before the challenge of a neighborly bird attracted his attention and provoked his reply, which he usually began with a short shrill, it would not have been advisable to move a muscle.

The family of sandpipers is very well-represented here on the island, and my collection therefore contains not less than nineteen species, or nearer one-third than one-fourth of the total number of species collected, a number liable to be not inconsiderably increased before the list embraces all the species occurring here as residents or visitors. I must confess that there are several species among my birds which I have not been able to identify, although I have no hope that all these will prove to be new. Thus the most common limicoline bird here is an *Arquedula* (Nos. 1031, 1039, 1044, 1048, 1085, 1107, 1108, 1262, 1344, 1345, 1468, etc.), about which I feel quite sure that it is a very well-known species, but as to these birds it is more difficult to determine the species from memory alone than in almost any other group that I know of.

But there are in my collection two species, the common forms of which I have been well acquainted with, showing some differences from these, if I am not quite mistaken. The one is the snipe, which, having only fourteen tail-feathers, comes nearer to the European *Gallinago gallinaria* (Müll.) than to the American *G. arctica* (Temm.). But I do not think that the former has the crisped and the under tail-coverts so dark brownish as my specimens, nor is the pattern of their greater wing-coverts quite identical. Snipe-hunting without a dog is exceedingly difficult here. For this reason I have at present only five specimens to send of this bird, which, in suitable localities, is by no means uncommon.

The other one is a form of *Phidippa alpina*, which seems remarkable for its pure colors and the absence of any dark spots on the lores. I cannot unite it with *P. chinensis* Swinh., which has been identified by Taczanowski with *P. schinzii* (Brm.), and consequently must be much smaller than my birds.

Finally, I have referred five birds (Nos. 1637, 1641, 1646, 1652 and 1659), with much doubt, to the genus *Tringula* Cuv., on account of their short bill, this being considerably shorter than the head, and the long toes exceeding the tail by their whole length when stretched backward. The feathering of the bill seems to me likewise to be more protracted than in other *Tringula*, although not to such a degree as given for the American *T. ripidissima* (Vieill.). Besides, there are no black mottlings on a white ground on the wing, only some faint whitish mottlings at the base of the remiges as it is often seen in *Tringula*. A conspicuous feature is the fine black bristles below and below the eyes, almost encircling them, and, upon the whole, more developed than in other genera. The color, except the rusty crown, is to a certain degree like the plumage of the snipe, and the bill, being somewhat widened, grooved, and furrowed at the tips, and having a very long nasal groove, also remotely resembles that of the latter.

The total number of species collected during these months amount to sixty-one, without counting those collected in Petropaulski; and, besides these, I have observed about ten species of which no specimens have yet been secured. Among the latter is *Sterna longirostris* Temm., of which a specimen was shot during my stay in Petropaulski, but on my arrival I found it in such a state of decomposition that it was quite unrecognizable. It was shot near the shore of the island, but only in four pairs. I looked in vain for my *Sterna alutacea*. Upon the whole, the poverty of representa-

tives of the subfamilies *Sterninae* and *Larininae* is very noticeable; thus, for instance, I have met with only one species of the genus *Larus*, *L. glaucus*, Licht., being not so numerous, however, as one might expect.\*

\* The species of *Larus* observed on Popokof Island by Dr. Kjellman in the summer belongs here. From the translation of a portion of Professor Nordenskiöld's narrative of the Vega expedition, Henry Elliot's monograph of the Real Islands, p. 112, it would seem that *Larus* was taken by the Vega by the name of *L. glaucus*. The American edition by Leslie, p. 617, shows, however, that they expressly restrict this statement to *Fratercula cirrhata* in accordance with fact.

\* Sundevall (Scap. meth. disp. Av., p. 145, 1872) has substituted for *Breuthia Scop. Breuthia* "Antai," a name suggested by some later collector, and Contrabius (Contrabius) (Contrabius) 30, but *Breuthia* is preoccupied for a genus of *Coleoptera* since 1850.

[TO BE CONTINUED.]

## NEW YORK FORESTRY ASSOCIATION.

THE indiscriminate cutting of timber, the stealing of it and the peeling of bark in the Adirondacks had been a great evil for years. It has been written about by individuals who saw that unless it could be checked there would soon be no woods to speak of, and consequently no water for the canals and rivers. The attention of the Legislature of New York was called to it, and last winter the Senate appointed a committee consisting of Senator Koch, Lynde and Frederick Lansing, to look into the matter and take such preliminary steps as would in their judgment seem just and proper for that purpose. Joseph Koch, its chairman, called a meeting of the committee at Albany, July 12. The meeting was held at the office of Superintendent Colvin, of the Adirondack Survey, at 11 o'clock on the 12th. In connection with this meeting Mr. Colvin invited several gentlemen known to be interested in the subject to meet with the committee and form a forestry association. In the Senate committee and form a forestry association. In answer to this call the following gentlemen were present: Gen. Robert Lenox Banks, C. P. Williams, Fred Mather, Judge Clinton of Buffalo, Hon. Neil Gilmour, Dr. S. B. Ward, Hon. P. J. Rogers of Seneca, Hon. William P. Leitchworth, Chairman of the State Board of Charities, Mr. William Barnes and several others.

Superintendent Colvin was the object of the meeting and read letters of commendation of the work to be undertaken from ex-Gov. Seymour, Hon. Erastus Brooks, Prof. Edward North, of Hamilton College, Dr. Franklin B. Hough, Judge Smith and Erastus Corning, all of whom gave words of encouragement to the undertaking, and expressed regret at being unable to attend the meeting. Mr. Colvin explained that the fact that the Senate committee on State Lands was to meet this city on the 14th of August, in movement by several who were interested in the formation of a State forestry association. He said that on the 8th of August the American Forestry Congress would meet at St. Paul, Minn. Heretofore the State of New York had been represented at the yearly meetings of the national body only by the presence of volunteers interested in forestry, while most of the other States had sent regular delegates. In view of the fact that so much had been done by the last Legislature looking to the preservation of the forest lands of the State, it had seemed to those interested that this was a favorable time to organize a State association.

Senator Lansing stated that there were 600,000 acres of forest land which the State now owned, having acquired title through recurring tax sales, situated in the counties of Essex, Franklin, Hamilton, Herkimer, Madison, Montgomery, Otsego, Schoharie, Warren and Yates. The State owned a length upon the necessity of saving these lands from further spoliation, both as a sanitary measure and for the benefit of our streams, rivers and commerce generally.

He was followed by Hon. William Barnes, of the Forest Commission, who gave a brief and interesting history of our forests, and explained the manner in which forests are preserved in Germany and Russia, showing on a map the outline of the Russian forests.

Mr. Colvin showed new manuscript maps, prepared in his office, of Hamilton county and other counties, on which the forest lands were outlined in red.

Mr. Lansing explained the characteristics of the lands shown on the map, and said that the question was as to whether the State should acquire more lands, with a view of securing the forest, or possibly in one great tract, and the great importance of the preservation of the vast forests in the Adirondack region, and urged that the Legislature in so important a matter could do little without the active support and assistance of citizens generally. Discussion and a comparison of views would have an educational influence and bring out the facts, and determine what it was necessary to do to preserve the forests. It was then explained that along the Black River the rapid cutting away of the forest had so opened the woods to evaporation that the springs of the head-waters were drying up, and with his people at Watertown it became a simple, practical question—shall the forests be destroyed and the streams cease to give the regular supply of water, or shall we study and guard against these dangers?

Mr. P. J. Williams believed that a forestry association might accomplish good results, and queried whether the interests of private owners in the forest region might not be made to contribute to the end aimed at—the preservation of the wooded lands and their scientific maintenance. He knew, from personal experience, that the lands in lower Hamilton were almost worthless for agriculture. The cutting of timber was entirely unprofitable, and was even falling to a depth of seven or eight feet. He had maintained a farm in the locality for ten or twelve years, by annual contribution to the family working it, not for any agricultural results, but for the purpose of having a summer home and a trout fishing resort for himself and friends. Pasture was fair in the district, but the ordinary crops of the farmer could not be grown. If the forests could be preserved, they would be a source of water, and there was nothing to prevent the hills from drying up. When he was a boy there was plenty of water in the Hudson for sail vessels to tack anywhere from Castleton to Albany and now nothing but a steamboat channel remains in summer.

After further discussion, Gen. Banks was chosen chairman, and Mr. Colvin, secretary of an executive committee, which, on motion, was made to consist of those persons present. The next step was to take action on the matter. A resolution, offered by Mr. Barnes, authorizing the executive committee to report a constitution and by-laws, and also to sug-

\* Neueste nord. avier, II (1765), p. 229.

\* This is completely senseless. I conjecture it to be a misprint for *Schneidmüller*.

post names for representatives of the New York Association at the meeting of the National Forestry Association at St. Paul, in August, was adopted. The meeting then adjourned subject to the call of the chairman. The Senate committee subsequently held an executive meeting for the purpose of discussing the best method of examining lands in the Adirondack region.

**A BIRD BATH.**—Your notice in the last issue of **FOREST AND STREAM**, of the fondness of birds for a bath in hot weather, reminds me of a scene very familiar to me during my rambles in search of specimens through the cedar groves of Bermuda, during the hot weather of the island summer. The peculiar formation of the group affords in several places depressions of the earth's surface, which have evidently once been the floors of so many small caverns, now minus their roofs. These miniature faults after rainfalls fill to the brim, and being watertight retain the liquid for several days, in a shady spot. To these welcome baths the gaudily-plumaged cardinal grosbeak (*Cardinalis virginianus*), locally termed "red bird," lies during the hottest period of the day, and one of the prettiest ornithological sights I have ever beheld, was that of a small flock of males, in full scarlet livery, performing their ablutions in one of the fairy pools situate in the midst of the dense *lantana* scrub in some retired part of the island. They generally dived in the breast high, and stooping down, flapped their wings violently enough to send the spray to a considerable distance. Having well wetted the feathers, they would hop on to the elevated rim of the tank and as violently vibrate their wings again, rubbing their whole bodies with their beaks, and soon drying the whole plumage. Then up into the branches of a neighborly cedar, and with a loud "few, few, few," they were off to their daily duties. I very rarely observed any of the other common resident birds of the island, of which there are only four—blackbird (*Melospiza carolinensis*), bluebird (*Sialia sialis*), chick of the village (*Troglodytes aedon*), and ground dove (*Chamaeliparus passerinus*) indulging in a bath, and this induces me to believe that the *Pringillidae* are at all other land birds proper, the greatest lovers of a bath.—J. MATTHEW JONES (Fern Lodge, Nova Scotia).

**LOCKED DEER HORNS.**—South Bend, Ark., July 10.—An old trapper found near here about three months since, a curiosity in the way of two pair of massive deer horns that were locked together by fighting, and in such a manner that it is impossible to pull them apart. He stated to me that he supposed the two bucks had been dead probably three months or more before he found them, and from the size of their frames, that they must have been tremendous big deer. They will be in the Arkansas exhibit at the Louisiana Exposition.—E. T. B. [We have a pair of such locked horns in this office.]

**RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS.**—Received by purchase—Two gray squirrels (*Sciurus carolinensis*), five heavers (*Cistichus f. canadensis*), one tamarina antelope (*Panandrus tamarinus*), one cassowary (*Cassidix quatuordecim*), six maned dogs (*Canis gallicus*), one Peruvian thicknee (*Adenotus superciliosus*), one Cuban parrot (*Chrysotis leucophthalmus*), one diamond rattlesnake (*Crotalus cerastes*), one hooded snake (*Agkistrodon cristatus*). Present ed—Two trunks (*Putorius vivax*), one black bear cub (*Ursus americanus*), one red fox (*Vulpes fulvus*), one woodchuck (*Marmota flaviventris*), one muskrat (*Fiber zibethicus*), one catbird (*Otus virginicus*), one robin (*Erithacus migratorius*), three yellow-striped woodpeckers (*Colaptes auratus*), one fish hawk (*Pandion haliaetus*), one laughing falcon (*Elanus leucurus*), one blue snake (*Basiliscus constrictor*), and one pine snake (*Pituophis melanoleucus*). Borne—Seven Virginia deer (*Cervus virginianus*), one oryx (*Oryx capensis*), one bighorn sheep (*Ovis montanus*), one llama (*Lama guanicoe*), two bueviers (*Castor fiber canadensis*), nine valley quail (*Lophortyx californicus*), four pea fowls (*Pavo cristatus*), and three mallard ducks (*Anas boschas*).

## Answers to Correspondents.

**SALEM, N. J.**—Can you let me know what you bait with to catch carp in a pond. Ans. See reply to "R. M."

**A. MEK., New York.**—What is the best bait for black bass? Ans. The minnow or bluegill, cut in halves, or a shrimp, minnows, frogs.

**M. W., New York.**—Please inform me of the best and nearest fishing place to Sing Sing, N. Y., for other salt or fresh water. Ans. There is little fish in the Tappan Zee, or Tappan Bay as that part of the Hudson opposite Sing Sing is now called, but it is not reliable. The best place to catch salt water fishing is at the New York Bay, or Long Island.

**T. F. M., New York.**—I am desirous of stocking a small lake in Western Ontario with black bass. Can you tell me whether I could, by addressing Mr. Seth Green, secure that end? That is Mr. Green's address, and what charges, if any, are made by him for sending trout to the lake? Ans. Mr. S. G. Green, N. Y., writes directly to him.

**Ans. 1.** We cannot say whether there are fish there or not. Try trout. They are a good species, but do not expect to get two or three pounds of lead two feet above the spoon, nor slowly. Try also trolling with a minnow cage in the same way. 2. The game is so new to me that I cannot say whether you would succeed in your own individual choice.

**J. B., Augusta, Ga.**—Will you please inform me if a small hand machine for making fishing line can be procured and from whom? Ans. We do not know of such a machine. Fishing lines are now made by machinery in large establishments. The makers deal entirely with houses in the wholesale fishing tackle trade and do not advertise, consequently they are unknown.

**R. M., J.**—What is the best way to kill trout when caught? 2. Are German carp and minnows and whitefish the best bait for bass? Ans. Put the second joint of the forefinger in the mouth, and the thumb on the back of the head, and bend upward until the neck is broken; then use knife to the junction of the head and body, and cut off. They are taken with boiled peas, a paste made with mashed potato and dough, and also with the worm.

**Ans. 3.** As to the strength of the strongest, most durable, and in fact most desirable, a twisted or a braided line? supposing both to be of the same thickness, or diameter. 2. Which is the best for trout? Ans. The twisted line is the best, and the braided line possesses over a linen line? Ans. 1. A braided line, because it does not kink. 2. It depends on what use you want it for. 3. A silk line is best for trout because it is strong, smooth, and good in small diameter. If you had told us what fish you fish for we could have given you more information.

**VACATIONS.**—Can you tell me whether the black bass fishing at Greenwood Lake, N. Y., is of any account in the latter part of July or first of August, does the bass fishing amount to anything there at any time? Ans. The fishing for the trout is the best in Pennsylvania, near the western part of New York State much better. I should be much obliged if you could enlighten me as to the above, and more so if you would tell me where the best fishing is to be had. It is best in August, and black bass fishing is often good at Greenwood Lake. It is best in spring, and larger fish are caught there. We have had fair fishing there the time you mention, but have not been there this year. Why not try the Lacawanna?

**W. C., East Douglas, Mass.**—Will you be kind enough to inform me the Mumford River Fishing Club what is the best time to fish in this town with carp? The pond is fed by springs, and covers one mile square, mostly gravel bottom. Will average about ten feet deep, and cannot be drawn out. I would like to know if you could inform us what variety is best, how to obtain them, and what they will cost, and how to proceed to have the pond protected by the State. Any other information of the lake and vicinity would be of aid. R. Baird, Washington, D. C., or to Mr. E. G. Blackford, Fulton Market, New York. The fish will cost you the transportation from the lake, and the price of the fish, and the price of the fish, and whether the scale, leather or mirror carp are best. The former is most prolific. For protection you must look to State or local laws.

## Game Bag and Gun.

**GAME RESORTS.**—We are always glad to receive for publication such notes of desirable game resorts as may be of help to the readers of **FOREST AND STREAM**. Will not our correspondents favor us with such advice?

### DUCK SHOOTING ON THE MAINE COAST.

"Down to lay waves the fish-hawk swoops.  
The wild duck floats within their bays."

"COME, Mr. P., get up; it's four o'clock, and we must be off," dimly in my dreams comes Tom R.'s voice, and the sound of his knuckles playing a devil's tattoo on my chamber door. Suddenly I realize the full meaning of this early summons, and with a yank the bed clothes go flying across the room, and out on the floor go to sea search after those never-to-be-found matches, which, finally, after thrashing around in the dark in a vain endeavor to encase our lower extremities in the sleeves of a canvas hunting coat, turn up on the wash stand. In five minutes I am down on the wharf in the quaint old seaport town of Kennebecport, and there find my trusty heechman making all ready for immediate departure, by the light of a lantern suspended from a ship's spar over his dory. In the bow of the light craft that is to bear our fortunes, are piled up the wooden decoys and in to these are placed our guns covered with a couple of old oil skin coats, bearing marks of age and seaworthiness. Mine is an American breech-loader of twelve-bore and eight and a half pounds weight, while Tom's is a muzzle-loader of heavy caliber, much the worse for wear, for its owner follows hunting and fishing for a livelihood, furnishing, for the modest sum of two dollars per diem, his decoys, boat, and self to wandering Nimrods like myself, and only too well tells his deeds to the pleasure of all concerned.

The tide is falling fast and a short half-hour's work at the oars brings us out on the bay, just as a faint streak of daylight begins to appear on the eastern horizon. Those who have been there can imagine the fun of sitting in the stern of a fisherman's dory, on a cold, raw morning of late October, when the chilly, salt air stiffens one's fingers, and crawls down the spinal column with a persistence worthy of a better cause, while the rough, choppy waves make one's interior department feel like turning inside out, in the endeavor to make an offering to the sea.

But it is no time for imagination to depict the pleasures of a lazy snooze under warm blankets, so changing places with Tom at the oars, I start the blood circulating in quick time before reaching the shooting ground just north of the mouth of Wells River. Here the decoys are anchored, and a distance of forty or fifty rods we drop our grapnel overboard, and lie down on our oil-skin coats in the bottom of the boat to await developments, and indulge in an investigation of the contents of the big tin pail which mine good cook of the hostelry has provided. We are right in the line of the sea duck and coot, as they fly from their feeding grounds to the marshes that line the river's bank, and a better morning for this sport could not be wished for. The sky is overcast with heavy clouds, forbidding a coming storm, and a light mist is falling fast. Not long are we destined to wait, for presently my companion's more experienced eye discerns a long dark line oceanward coming directly for the boat. Nearer and nearer come the birds, but sweep by just beyond gunshot, while the sight of a dozen big black ducks just out of our reach causes a silent chorus of "confound the luck" from one end of the dory at least. "Look out," says Tom, and now a batch of old squaws are within reach of the gun. I am just about stopping on their way ashore. Quickly I pull the right barrel on them and "nary" a feather drops, but desperately putting the left full four feet ahead of the line, I am made happy by seeing two dead and one wounded bird brought to the water. Tom soon has the dead ones on board, and bids good-bye to the third, which is only wing broken, and is swimming and diving a half mile away. Making due allowance for the fact that you are further from the game, I eventually vow to pull ten feet at least on the next, and presently have an opportunity to practice it on a solitary sheldrake going by at express-train speed, and just clip his tail feathers neatly, without stopping him in his course.

Now for a half hour or more all is quiet, save ever and anon the shrill cry of a loon away toward the south shore, and a flock of wild geese far overhead on route for a warmer clime. We are just filling our pipe for a quiet smoker, when a sudden splash! splash! splash! greets our ears, and as the water is splashed high in air alongside our stools, we see between twenty and thirty gray coats that have approached unseen, swimming slowly away from their stolid wooden brethren. Two charges of No. 4 shot scattered promiscuously among them cause a sudden panic, and again as they rise in the air, another volley still further thins their number, and the remaining school, as it were, with their wings can carry them. We pick up nine dead, and have a tedious chase after four or five wounded ones, succeeding in gathering in only two. One of them, apparently lifeless, is thrown with the others in the bottom of the dory, when to our surprise with a shake of his wings he flops over the gunwale and dives for the bottom, escaping Tom's outstretched hand. When he came to the surface after his dive, an untimely charge of shot awaited him, and with a last struggle, his fat but fishy corpse is once more brought to light.

For more than an hour we have good shooting until the morning flight is over, and with arms and shoulders aching from heavy gun charges we desist from firing, and picking up our traps start for home. None too soon are we, as the mist has changed to heavy rain drops, and they are patterning down in such a suggestive manner, that we are, for a moment we wait, however, for that old loon coming down the wind, and in spite of Tom's muttered, "You can't get him; too far away," I fetch a him a clip in the head with a four-draught charge of Dupont's best, and an ounce of No. 2 chilled shot. With a "hip, hooray, boys," we take in his lordship, and Tom lays to the oars with a will.

"Another loon, Tom, by all that's gorgeous," is my shout as we round a long point of rock and sand, seeing a northern diver leap the shallow bay, apparently an easy capture. We reach the corner of the inlet, and there is no chance of his flying by over the water without being in range, but to our discomfiture the loon proposes not to use his wings, but disappears under water and comes up to view away out at sea behind us, rising his full height from the waves, while that shrill, mocking laugh is thrown tauntingly after us as we row through the storm for the river, now near

at hand. Close to the pier at the mouth of the river, a very unexpected and welcome sound is heard—a hunk! a hunk! directly overhead. Tom yells at me to shoot, as five brown geese are flying almost directly in the boat's course only twenty-five or thirty yards high, and evidently tired with their long flight. Hurriedly I haul my gun out of its rubber case, and raising it to my shoulder, pull the trigger, but no report follows, for the hammer is at half cock. An instant suffices to remedy this, and the charges are plucked full into the flock. Then it is that we feel like having a Pawnee war-dance, or an Irish jig, as a brace of fine geese come down "ker-splash," one almost within reach of the oars, and the other scaling up two or three hundred yards and falling as dead as a stone, having flown as long as strength held out. Tom winks once or twice as he thinks of the extra pay my good luck will bring him, and just as the clock strikes the dinner hour pulls up by the shipyard to the wharf, and a couple of wet birds, and hungry chaps disembark with our game. Tom gets his pay twice over for treating his charge to the best day's sport it has ever been his luck to enjoy, the one "big day" to offset the many wearysome tramps in field and wood, when, returning tired and gameless from the hunt, we feel just like forswearing the gun and dog. But how often do we forget the bad luck and, with undiminished ardor, at the first opportunity are off for the field in quest of another "skunk" or a fairly good bag.

"All hail, ye Nimrods, sportsmen hold."

May care's nets ever shun,

No woe or poverty e'er depress

Our brothers of the dog and gun."

A. M. P.

POTOMAC, CONN.

### THE PRESIDENT'S MESSAGE.

**WHEN** Mr. A. H. Mershon, of East Saginaw, was re-elected president of the East Saginaw Game Protective Club, after the manner of other officials he prepared a "message." The club were not favored with the document, but the manuscript was cast away into what threatened to be oblivion, until one day the **FOREST AND STREAM**, by mysterious agencies of its own, gained possession of it, and herewith publishes. Our readers will recognize in the message the same language which Mr. Mershon used in a meeting held and published in our issue of January 15, 1883. The document is as follows:

*Gentlemen of the East Saginaw Game Protective Club:*

Having learned from this morning's paper that I am again re-elected President of the East Saginaw Game Protective Club, I hasten to prepare and lay before that useful, ornamental, and influential body, my unusual annual message. Fellow citizens, honorable, hard-working and economical members of this distinguished organization! It affords me a certain sort of pleasure to tender my cordial greetings upon the occasion of your assembling, and I beg you will allow me to congratulate you upon your happy choice of officers, as I learn the entire executive force, including myself, are re-elected by a unanimous vote, and that without the technicality of a quorum being present. In this connection let me call your attention to the fact that if you should insist upon a quorum of members who have paid their dues to date, you would probably never hold a meeting, hence the policy of your prompt and comprehensive action.

#### FOREIGN RELATIONS.

The duty devolves upon me of presenting to you the condition of the affairs of this association, such as they appear to me to need your consideration and attention. I will state here that our foreign relations are generally friendly, in confirmation of which I refer to the messages of my confrères, Chester Arthur, Benjamin Butler and Mr. Begole, who have all noticed that fact, and but recently made the same observation. I think we need fear nothing from either Clare or Roscommon counties—if we let them alone.

#### FINANCES.

I am glad to be able to assure you that our treasury is in its normal condition, and when some of our delinquent members shall find it convenient to pay in their dues there may be some funds on hand. In the meantime you will continue to "stave off," so to speak, the little printing bill, etc., as usual. As you are aware, this is not a sordid affair of dollars and cents; it is a matter of principle. Economy, if I am not misinformed, is one of the cardinal virtues, and should be strictly observed and carefully nursed. I respectfully suggest the expediency of ringing in (excuse me)—soliciting—new members, who may, at a few dollars each, if obtained in sufficient numbers, replenish our exchequer. You may be able, in this way, to ultimately pension some of the older members who have worn themselves out in the arduous labors of trying to get a quorum together. Still, it is not quite clear to my mind that this subject should be approached, except with extreme caution, until the matter is in sight. I recommend that trade dollars be taken at par, and until a sufficient sum shall accumulate, a "sinking fund" might be a good name to give it.

#### GROWTH AND INCREASE.

It is somewhat humiliating, to contemplate the slow and unsatisfactory progress of our association. While other organizations have increased, under adverse circumstances, from 100 to 500 per cent., during the past decade, ours has scarcely more than held its own in numbers. I have no figures at hand to illustrate these facts as to the State of Michigan, but presuming Illinois to give about the same result, I give below figures from the censuses of 1870 and 1880, showing the number and increase of certain classes in the latter State:

Insane.....	1870.....	1881.....
Blind.....	1,625.....	5,411.....
Deaf.....	1,000.....	3,200.....
Dead.....	1,000.....	3,615.....
Totals.....	4,715.....	14,121.....

It is an extremely humiliating fact that the four unfortunate classes quoted above should increase over 300 per cent., while the E. S. G. P. Association should hardly hold its own, although in the possession of all its facilities.

#### AGRICULTURE.

Although it may seem to you that agriculture does not come within the scope of your influence or control, I will endeavor to show you that to a certain extent, indirectly, it may. We must all admit the policy of conciliating the farmer, and keeping the right side of the honest granger. Many of them, through ignorance, are trapping quails, turkeys, ruffed grouse, shooting game out of season, ruttling trout and taking them from their spawning beds. They are

even bringing up their boys to trap, snare, and sell quails (called "colin," when you don't want them to know what you mean), taking them to market with only a pinched head, or broken neck, when a simple punch with an awl, or a jab with a fork would enable them to swear they shot them, without much risk of penalty. An occasional small shot inserted in the hole would satisfy any petit juryman of modern times.

You will see the expediency of educating the farmer and his family up to the standard, so that he may be led to divide with you occasionally when you cannot, consistently, provide your own table with the luxury of game in season, or any other time.

#### REVISION OF THE TARIFF.

While some may doubt the policy of mixing our affairs with political questions to any great extent, I would ask your careful but cautious attention to the protection of game, which, by a moderately elastic construction may come within the "tariff for revenue" side of the case. Game, if properly protected (from observation) can be made to produce revenue at all seasons of the year. Your wise consideration of this fact is respectfully suggested. Trout, grayling, and other protected game fishes will come under this head. You must not consider that I recommend any interference with game, as understood by another branch of the sporting fraternity. I allude to poker, both straight, draw and tunk, keno, faro, croquet, polo, tennis, charades and base ball. The various varieties of pool properly belong to the Fish Commissioners, who would carp at any officious intermeddling in that channel. The industry of these classes of game upon revenue is so uncertain, that I advise you to be very careful to look over your hands the second time previous to risking money upon their value. I may, however, be allowed to hint, as my individual opinion, the policy of reforming the rules now in vogue as to the Jack pot, so called, which is a destructive modern invention, and gives capital an undue advantage over labor, induces and encourages rakes, causes loss of the command so far exceeds the supply that production is stimulated to such extent that decks are overloaded, holds are full in flush times, when many rash speculations are made, resulting in disaster in the call. I may safely leave these matters to your mature judgment, trusting you will deal fairly with them when it comes your turn.

#### IN CONCLUSION.

Thinking you, who are still awake, for your kind indulgence and the deep interest you seem to manifest in my remarks, and that I do not disturb you far exceeds the supply that production is stimulated to such extent that decks are overloaded, holds are full in flush times, when many rash speculations are made, resulting in disaster in the call. I may safely leave these matters to your mature judgment, trusting you will deal fairly with them when it comes your turn.

A. H. MERSTON, President E. S. G. P. Club.

EAST SAGINAW, Mich., Jan. 7, 1888.

### STAR WADS.

Editor Forest and Stream:

Under the above heading in your issue of June 21, one of your correspondents asks for some information from those who have used them. My experience has not yet been very extensive, but as far as I care is decidedly in favor of the star wad. They have been used quite firmly in place in every shell in which I have used them, whether in new paper shells or in those which I have unloaded.

My gun is a W. & C. Scott Damascus barrel, 12-gauge, choked to 14 at the muzzle, and I do not find that there has been the least injury done to the barrels. I am convinced that these wads cause the gun to shoot closer than when a cartridge is crimped. As evidence of this fact, I was shooting clay pigeons on the fourth of July, and found that I must get directly on the object or I would miss it; and then, as a further test, after others had shot and missed several, I shot, and broke them at least 50 to 60 yds. distance; all of the time I was using 3 drms. of Dupont No. 2 powder, and 14oz. No. 8 shot. The metal of which these wads are made is so soft that it would appear impossible to injure the barrels of a gun, and yet they do hold the paper wad down very perfectly.

NEW YORK.

J. H. T.

### GAME IN COLORADO.

THE game in Colorado is fast decreasing, owing to the non-enforcement of a not very stringent game law. Your correspondent interviewed one of the oldest and best-informed sportsmen in the State. He said that within the last fifteen years buffalo could be found within a few minutes' ride of Denver in numbers of thousands, and antelope could be seen in the outskirts of the city. In about six years ago one wandered into the city during a blinding snow storm. Some four years ago, during the month of January, when the antelope made their appearance, after a severe snow storm, hunting for food, 285 were killed by stag hounds, near the exposition grounds. This was during the close season. It is only a few years ago that the black-tail deer could be found within two hours' ride of Denver; and also that famous animal the Rocky Mountain sheep could be found in large numbers in the neighborhood of Bear Creek and Clear Creek Cañon, while the cinnamon, black and grizzly bears were abundant enough to satisfy the most bloodthirsty tourist.

With the advent of the railroads into the mountains all this was changed: the employees of the railroad companies, from the contractor to the train boy, considered it their game their property and slaughtered indiscriminately, in season and out. In places where the railroads do not reach, the stockmen and desperadoes kill the game, blow up the fish with dynamite, and in many cases kill deer in the close season for their hides only. Even the well-to-do stock raisers, men who would consider it an insult if you accused them of breaking the law, have been found mounting off game in the close season, justifying themselves by a clause in the game law which allows a man to kill game for his own use only. Buffalo cannot now be found within 600 miles of here, while only fifteen years ago there could be seen thousands of them. This may sound exaggerated, but it is a bare fact and can be proven.

The Legislature here is not competent to enact a suitable game law, and unless the people will elect men who can appreciate the value of the game and fish to Colorado, things will get worse instead of better. It is a well-known fact that Eastern and foreign sportsmen have contributed in no small degree to the welfare of Colorado, and if the game is not protected, she will lose one of her greatest attractions to tourists. Wealthy men come here in search of health, rec-

reation and good hunting; and in many cases have located here and greatly increased the prosperity of this State. If the game be exterminated, the attraction for the moneyed tourist is gone, and Wyoming or Montana will reap the benefits that Colorado can and should have. There are in this city of Denver men who, if they would, could do a great deal to stop this illegal killing of game, and if they can only be persuaded to set the ball rolling, will find plenty of supporters in the other towns throughout the State.

In Grand county some prominent men who have openly violated the game laws only a few days ago, shot each other, which proves, in this State at least, that a man who will break the game laws will commit murder.

When the citizens of Colorado awaken to the fact that she is fast losing one of her greatest attractions, then they will enact and enforce a law that will protect the game and fish, but unless they do this very soon it will be too late.

THAT OFFICE BOY.

DENVER, Colorado, July, 1888.

A REVOLVER STORY.—Editor Forest and Stream: Your readers have undoubtedly all heard of the traditional lunatic, who, during the heat of an engagement, loaded his charges of powder and shot in his musket, one above another, in order to get six successive whacks at the enemy without stopping to reload; also, of the fellow who goes hunting once a year in the summer time and always manages to ram two big charges down one barrel of his gun at a critical moment, when he sees a red squirrel smiling at him from the opposite side of a tree limb. What I want to chronicle is a newly-discovered method of compound loading, which certainly beats both the foregoing by a vast majority. Last summer my brother Walter, accompanied by several other boys, went down the Ohio River a few miles from town, and while in a grove tried target shooting with a 7-shot, 22-caliber revolver. Strange to relate, after each discharge no bullet marks could be found anywhere. At length, when the shooter tried to cock the revolver for the sixth shot, he found the concern would not work. In the investigation which followed a remarkable discovery was made in the barrel. There, wedged tightly together, one behind the other, were the five lost bullets, jammed into one made with the tail end of the fifth bullet projecting into the cylinder and clogging its action. The cylinder was found to have been put into the revolver out of a true line with the barrel, and the bullets, moreover, being rather too large and tight for the weapon, they had lodged, one upon the other, in the barrel, as described. The mystery to me is why the shot didn't blow up. As the Irishman would say: "The facts in this case are entirely true."—W. (Kentucky).

WESTERN NEWS.—Mexico, N. Y., July 9.—I fear that the fall shooting in this vicinity will be a failure; at least will afford but little sport to local sportsmen. In talking with a gentleman yesterday (who always keeps his eyes open) he said we would have a few woodcock as he had seen one or two broods in his rambles. Big and Little Sandy ponds have been mentioned in your paper frequently, and I need say nothing of them. Oswego sportsmen come in part, if not entirely, all the duck shooting at both ponds. The ruffed grouse is no longer seen in this locality, I don't suppose there are twenty-five birds in the county. In my early boyhood I used to find a covey in almost every piece of woods. Now there are none. "Tis the parasite or worm and not the hunter that has destroyed our best game bird. The bass fishery continues good, though I understand that the best fishing is found at Captain Sam Nichols', up the lake and nearer to Oswego.—J. W. S.

THE CHARMS OF FLORIDA.—There are hundreds of your readers, who like the writer, have spent winters delightful and pleasant to remember among the lakes, the woods and marshes of Florida. Go there from the snow and ice, the slush, wind and rain of our northern winters; camp (not in the hotels nor among the "crackers," but in your own tent under the pines; sail in your own boat; leave the lines of tourists' travel; go anywhere in South Florida and good sport with rod or gun can be had for those who seek it patiently and do not expect too much. As for the climate, it can restore weak lungs I know from experience. I also know that in the southern end of the Peninsula it is usually dry, delightful weather from January to April. For fishing, where can it be equalled? Of game there is enough, except for those who wish to slay their thousands in a day, and all from the deck of a steamer.—G.

REED BIRDS AT THE SEASIDE.—In stating that the reed bird was never found near salt water, I only intended to convey the idea that the bird was not abundant in such localities, or in numbers that would warrant their being sought; and thus criticized the article referred to. They are plentiful in season, and in the best condition for the table only when they are feeding on the seeds of the fresh-water reed, and then are not game. I have killed them in May, for mounting in bobolink plumage near the seaside. Those shot, as stated, among beach plain bushes near the salt meadows could not have been in prime condition. Your correspondent has killed wild pigeons on the beach that skirts the New Jersey coast, but would not advise such grounds to be selected by the sportsmen. He has also seen a horse fly over the river.—Homo.

TEXAS PRairie CHICKENS.—Indiana, Tex., July 9.—Have had nice showers these last few days, and look forward to good prairie chicken and plover shooting on the 1st of August, when the season opens.—G. A.

PRAIRIE CHICKENS IN MINNESOTA.—Sauk Centre, July 10.—Present prospects are good for prairie chickens, and it is a dry season and has not been bad by flooding the marshes for any length of time.—DELL.

"BATES'S TRAVELS IN MINORCA."—The editor of this journal wishes to procure a copy of Bates's "Travels in Minorca," and will thank any reader who may direct him to where the book can be found, or who may send him the full title page.

A son of Mr. Henry Christison, living a few miles west of Winchester, Ill., met with a painful accident a short time ago which will cause him the loss of one of his eyes. While engaged in the business of cutting hay, he was seen by a hawk caught in his eye, sinking in the pupil beyond the beard of the hook, making it necessary to have a surgical operation performed.

## Sea and River Fishing.

To insure prompt attention, communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

ANGLING RESORTS.—We shall be glad to have for publication notes of good fishing localities. Will not our correspondents favor us with notes of desirable points for angling excursions?

### A DAY'S SPORT AT CEDAR STUMP.

ON June 25, 1888, two veteran anglers might have been seen at Middle Dam Camp, on the Rangley Lake, making preparations for a trip some distance away. Any one knowing the country and the men well would have said, "There is business ahead," and as the backboard was driven up in front of the camp, Judge P. and the Scribe stepped aboard, with lunch basket, landing-net, and two good fly-rods. As the horses started down the road toward Cedar Stump Landing, the boys in camp heard the undertone of what was up, and soon one remarked, "That means trout for those two old coons know what they are about, and I have noticed a mischievous look about their eyes for the last half hour."

Three and one-half miles ride, and we left the backboard and walked down the old trail a half mile to Cedar Stump Landing. As we parted the alders were stepped out on to the rocks by the riverside we looked down the undercurrent to the still water below the rapids. The trout could be seen breaking water in a half dozen places at a time, but entirely out of our reach.

"A boat, my kingdom for a boat!" broke forth from the lips of the Scribe, but no boat was to be had, and the next thing the do was to fish the "spring hole" and the rapids. Carefully creeping out on the rocks, the Scribe went east; the instant the flies touched the water both rods made their bows, and with heavy tugs and plunges the fish swung down the stream.

"Say, Judge, this looks like business—both fast to large fish at once."

"Yes, Mr. Scribe, we've struck it this time."

We carefully work our fish up near enough to see them, and "Clubs, by thunder," when the Judge unhooked two clubs weighing nearly two pounds each, and they were whacked on to the rocks in a way that indicated great displeasure. About this time the Scribe's face took on such long dimensions that it is not necessary to say that he had duplicated the Judge's catch of clubs. We kept at work, however, until this kind of a row was well cleared out, when we concluded to wade back to the shore and let the water in the pools quiet down, then try again; for we were sure there were trout in them, and large ones at that. Ten minutes' rest and the Judge decides to go up stream some six or eight rods to a nice looking pool, while the Scribe leisurely waltzes about two-thirds the way across the river, clearing the flies for long casts toward the "spring hole." The third time, and the flies came dancing in the very spot intended. "Great Scott! what a trout he is two feet long if an inch!" but he just missed the stretchy fly and was gone like a flash. At that instant a cry is heard from the Judge, above the roar of the waters, "Come with the landing net," but the temptation was too strong, and the Scribe made another cast.

Ye penurious stay-at-homes! Ye gingerly fellows that are afraid of a little tar and oil and a few mosquitoes, and ye who dig and delve from year to year, and will not take an outing and bask in the golden sunlight, and wander through the majestic forests and by the peary streams. To you I do not address myself. It would be casting pearls before swine, but to the man who can walk the fly-rod well, and who understands the gentle art, and loves the woods and the flies, and hears the water splashing as his gliding notes float through the green valleys and from the mountain sides, to you I would say: The ecstasy of the next moment cannot be described, but you, and you only, can understand it well.

The sun had struggled through a rift in the clouds, which gave the rippling water a bright golden tinge, through which the form of a trout was seen, and a moment later a rainbow as he plowed upward and upward through the rushing water, and with a splash that had given an amateur the "buck fever," closed his huge jaws over the light-winged "Montreal." A strike, a "twang" from the line, and a rush of sixty feet down stream, when the old and tried ten-ounce split-bamboo says, "Whoa!" and I find that the trout has been brought within four or five pounds, and a stubborn fighter at that. But I will not weary FOREST AND STREAM'S readers with a repetition of the playing and netting of a trout when it has been done so ably many times before. Suffice it to say, that I had forgotten the Judge, who had towed his two-pound trout ashore and saved him, and now stood by my side, and as he gently slipped the net under my trout, quietly remarked: "I saw the whole business, and I was well done."

After a short rest we struck out again, and in a half hour, we added to our catch two more trout weighing three pounds each. At this juncture the Judge concluded to cross the river and fish down toward the still water. I was busy casting for a large fish that would rise but would not take any fly I had in my book, when I heard a tremendous splash across the river. I glanced across and, O horror of horrors, no Judge to be seen, but only a half-struck trout in the current, which finally makes its way to the shore and slowly rises from the water with something in the shape of a man under it, and both disappear in the woods. I never allow myself to laugh at other's misfortunes, but this thing was so sudden, so unexpected, although I was told by a near relative of the Judge, that if he got excited he was liable to fall in the water, perchance upon his head, and thus drown. At this time, and I well knew that if I even snickered the Judge would not like it, and I might lose my balance; so I bit my lips, pinched my ears, and even pounded my sides, to keep down the great waves of laughter that came bubbling up and trying to escape. All at once I began to see-saw on that rock; I reeled, and teetered, and waltzed around, until I found I had got to go, then with a yell of half rage and half laughter, and one grand swish, I slid off the rock and stood in the water nearly up to my waist. The Judge told me afterward that he saw me standing on a rock, and as my head was turned he guessed I was laughing at something, and he did not know then, neither will he until he reads this, that the Scribe slipped full as much water on that memorable day as he did.

covers, or in the six hundred pages of its catalogue, more suggestive than this contrast between the exhibits of China and those of the United States. They represent two very opposite views of human life, and two very opposite methods of dealing with nature and of extorting from her the means of subsistence. Will the people who have grown to 300,000,000 already—an expansion no other people have ever reached, an homogeneous population equal to the aggregate of all the nations of Europe—who are able and ready to work well for less than half other people, who can live where any other people would starve, who can labor in every climate, and are content with any form of government, will they at last burst the invisible bonds which have hitherto kept them within their own boundaries, and which there now appears in them some disposition to burst, and overflow other parts of the world, and displace existing populations by getting possession of the means of living, through their ability to work harder and to live upon less? Or, to look at the question from the other side, will the most progressive people in the world, who take it for granted that those who have gone before them did it no more than the starting-point from which they themselves are to advance; who, without shrinking from manual labor, labor with the brain as no other people ever did, in order not merely to live, but to live well; who regard the whole world as the field for their activity; and who look upon the force of nature, and the materials of nature turned to the best account, as so many problems which they are called upon to solve, will they be hemmed in, beaten, and displaced by the Chinaman?

It has been said if a Chinese Napoleon were to arise he would cut out very ugly work for the rest of the world. That apprehension, however, we may summarily dismiss, because the future can only grow out of the past, and China during its thousand years of existence, and out of its hundreds of millions of people, has produced no Napoleons. The contrast just dwelt upon seems to meet satisfactorily the apprehensions on this subject with which some minds are at present troubled. Who can doubt that fifty years hence the Chinaman with the same appliances as he sets before us in this Exhibition, will be capturing about the same amount of fish he captures at this day, and which is probably about his entire food supply. He will capture, in a few years, two or three thousand years ago? This interesting and instructive Exhibition shows, among many other things, that the history and present condition of the fisheries of all people, together with the amounts of enterprise and hardihood displayed severally by their fishermen, constitutes a very fair measure of the character of the people themselves.—*F. Barham Zincke in Macmillan's Magazine.*

**TIM POND AND THE SEVEN PONDS.**—I send you extracts from letters just received from the Maine resorts named: "July 3, 1883.—Smith is getting lots of letters from new parties referring to advertisement in FOREST AND STREAM. Several cabins are engaged by sportsmen for themselves, their families and children to board at Tim Pond for two months. The more the better. More sportsmen are here this season than up to this time last year. The prospect is for a very large increase through the season. Gen. F. C. Barlow, of New York, with two sons, are now having splendid trouting at Big Island Pond. I saw in Gen. Barlow's boat fifteen or twenty trout averaging about one pound each. Mr. Henderson weighed two of them, one weighed two pounds seven ounces, the other two pounds five ounces. The tackle is the best. The name of the gentleman from South America who has been at Seven Ponds the last twenty-five days, came into camp last night from L. Pond, bringing the best string of fish I have ever seen from that pond. A man from Boston went to Tim Pond yesterday, and was having grand fun when I left. There are several broods of young partridges in the woods this spring, but cannot yet tell how numerous they will be the coming season, but the law that prohibits killing them for the market will save thousands per year for sportsmen and the home tables. I saw a bear in the road between Smith's house and Tim Pond recently; he looked at the buckboard team a moment, then made good time for the cover of the forest." "The law protecting trout in this State is a great help to fish in these ponds as well as all others. Formerly there were more trout caught out of than in season. Not so now, and I have no children to board at Tim Pond, but the sport is quite as fine now as then. Hope when you come you will have your usual good luck."—*J. W. T. New Britain, Conn., July 11.*

**NOTES FROM THE SUSQUEHANNA.**—Athens, Pa., July 9.—*Editor Forest and Stream:* In your many mentions of bait for black bass, I have not noticed bullhead mentioned. This is the principal bait here; and those who fish for big bass use a bullhead from two to four inches long. When fishing with these you are not troubled by the biting of small fish. They are found under loose stones in the riffles, and are caught by stunning or by dip net. Hook them through the lips. E. W. Davies, our enterprising fishing tackle man, offers a fine rod as a prize to any of his customers catching the largest black bass with hook and line during the season, the bass to be weighed by him. We have had little or no fishing here yet, as the river has been too low for mudpuppy. But early in the spring quite a few yellow bass were taken by trolling. Monday evening, July 9, a fish club was organized to protect the fish, which are disappearing yearly because of pot fishing and seine drawing. J. S. Williston, President; E. W. Davies, Secretary and Treasurer; R. Jolly, Fish Warden, besides others appointed to act as wardens. A reward of fifty-five dollars is offered to any one who will give information that will lead to the conviction of parties who draw seines in the county of Bradford.—*W. K. P.*

**PICKEREL TAKE THE FLY.**—A well-known angler of New York in a private letter to us wrote as follows: "Last week I took advantage of leisure to run down to Southampton, Long Island, where another gentleman and I caught fifty-nine pickereles on the fly, casting not trolling, and thirty large-mouthed bass. The pickerel were far more game than the bass, and reminded me of the festive trout in action. The pond where we caught them is surrounded with overhanging bushes, which explains to me the readiness with which we caught them in casting the fly. When I saw what we were about I put on some 'old sockers' I bought several years ago, and had him aside as useless. They were so many and so thick, that I left them very little, having some wool bodies, yellow and red; wings, mostly red and black. Did you ever?"

**CAMPBELLTON, NEW BRUNSWICK, JULY 9.**—Salmon and trout have so far been scarce in the Jaquet River, but in the Restigouche waters both the net-fishermen and fly-fishers report the catch of salmon to be the largest known for years, and during the first part of June trout fishing at the head of the tide in Bay Chaleur was good, but now at this date little or no sport is to be had there. The writer and Mr. Richard Parker, of Campbellton, have just returned from some lakes back some twelve miles to the wilderness from here, where we have had good trout fishing, and a portion of the trout taken there were the most beautiful specimens of *S. fontinalis* imaginable. With the exception of a narrow, dark-mottled strip along their back, the general color was a pale yellow, with four rows on each side of the fish of large deep gold spots, and running through and among these larger spots were two rows of smaller spots of the deepest crimson. I several times had two of these trout that would weigh about 12 lbs. each on my flies at the same time, and they presented, while darting through the water, their colors, which shone with a bright metallic lustre, to the best possible advantage, and formed the most attractive pictures that I ever saw. Moose, caribou and bear signs were numerous in the vicinity of those lakes. I also saw a hen ruffed grouse that had a large family of chicks. A part of them were, at least, three or four weeks old, and the others not over two or three days old. With the exception of the few days that trout are running in the first part of the season, trout fishing is not as good in this section as in the lakes north of the St. Lawrence River, or even in some portions of Maine and the Adirondacks, while the expense is greater, with nothing of the comforts that you get in the last-named places. Here at the hotels, badly cooked food and dirty sheets are the rule without hardly an exception.—*STANSTAD.*

**BLACK BASS TACKLE.**—Mamaroneck, N. Y.—I have read with pleasure and profit Dr. Henshall's article on "Improved Black Bass Tackle," in a recent number of FOREST AND STREAM. I have seen the reels he refers to, and they are certainly improvements on the right direction. The writer's clear and evidently impartial manner in setting forth the good points of these reels is to be commended. The black bass being, in a manner, my specialty, I feel much interest in everything pertaining to improvements in the "tackle" by means of which this game fish is caught. There are other reels and fishing appliances which I should be glad to see the Doctor treat in the same practical way, showing their defects as well as their good points. In regard to the new line, I have had some fishing and have seen, in the Doctor's description, and which, for aught I know, may have been made to meet the requirements called for by Dr. H. in his "Book of the Black Bass," and which has been for sale by Messrs. Wm. Mills & Son for about a year past. It is numbered H., is a very hard brand, very strong (lifting nine pounds or more), and is in all respects the best black bass line I have yet seen. It may have been made by the parties Dr. H. mentions, at all events, it seems to me identical with it, and deserves all the praise the Doctor bestows upon it. Articles like the Doctor's last are very useful to such readers of FOREST AND STREAM as are not well posted in regard to fishing tackle, and who are not quite willing to trust implicitly to the highly drawn descriptions found in many of the catalogues.—*PETRA.*

**REUBEN WOOD IN ENGLAND.**—New York, July 10.—The following extract from a private letter just received from my friend Henry Wright, Esq., confidential secretary of the Duke of Sutherland, will be read with interest by the numerous friends of the champion fly-caster of the world. Reuben Wood, Esq., of New York, writes, Sturges and PAGE, "Stafford House, St. James, London, June 28, 1883. My dear Mr. Page: \* \* \* What a pity you cannot be at the Fisheries Exhibition here. There never was so complete and extensive a show, and probably never will be again. Although I have been several times, I was so hurried that I was unable to study anything closely. I met your friend Reuben Wood, a tall, genial, cheery gentleman, who showed me some beautiful and new reel, which would be very convenient for trout fishing, but I am afraid would not enable one to kill a heavy fish, otherwise it would be a great advantage when a fish was running toward you to be able to run up the slack more rapidly than by the usual plan of hand winding. A few weeks ago I was at Dunrobin, Sutherlandland, Scotland, and killed two salmon on my single-hand line, and I fear I could not have done that with the spring reel. I am going to Trenton, Staffordshire, to-morrow, and on my return I mean to have another 'palaver' with Mr. Wood on the subject. Yours very truly, HENRY WRIGHT."

**THE BIG CAT OF THE KAW.**—North Carolina.—*Editor Forest and Stream:* "Ouachita's" big "gar" beats me by just eleven pounds. While in Lawrence, Kas., in 1878, I saw a catfish taken from the Kaw River, at the dam of the Douglas Company's mills, which weighed 165 pounds. Some of your readers probably will remember the incident. This monster cat was caught with tackle similar to that described by "Ouachita" in the "angler's" column. The fish was "sons of Ham" to land the fish, and I well remember that after a pole had been run through its gills, and shouldered by the proud possessors of the prize, the tail of the fish trailed on the sidewalk as it was being carried up street. This was the largest fish I have ever seen taken with hook and line, though some of the "forty-niners" can tell of larger fish having been taken from the Missouri and its tributaries.—*F. R.*

**PRINCE EDWARD ISLAND.**—Charlottetown, P. E. I., June 30.—*Editor Forest and Stream:* The long continued rains have kept the waters well up in the small rivers of this island, which has made trout fishing the best known here for years. Mine host Davis has just returned from the "Morrell" with fifty pounds of trout in a thirty-five-pound creel, and the basket was not full either. After much discussion and a war of words the cat was played on the scales, and showed thirty and one-quarter pounds, which may be set down as the usual difference between a fisherman's guess and the actual fact. The catch of salmon here this season has so far been a small one. The movements of *S. salar* have been very erratic, a great scarcity in some sections, while in others an overabundance.—*STANSTAD.*

**SHEEPSHEAD AT CAPE MAY.**—July 12.—The sheepshead fishing at Cape May Point continues to be very good. Mr. Cushman, of Philadelphia, having run many days since taken twenty-five fish during one forenoon.—*HOMO.*

**VERMONT TROUT STREAMS.**—East Berkshire, Vt., July 14.—I am living on the Missisquoi Railroad, twenty-two miles from St. Albans and within five miles of plenty of trout fishing. There are several brooks where plenty of trout are caught, viz., Wade Brook, Mill Brook, Hannah Clark Brook, Jay Brook, and several others that I do not think have any names; and besides these is Trout River. A short time ago I fished on Wade and Jay brooks, at the junction where Wade Brook runs into Jay Brook, and took out eighty-seven fine trout that were served up, shortly after, at several different places, I having divided them among my friends. It is a fine place for a sportsman to spend a few days, as there is plenty of fishing, with good hotels near by. Plenty of partridges can be shot there after the first of September, as they are very plenty this year and with but few hunters. Till I commenced taking your valuable paper I did not know anything about angling, other than going to the brooks, yanking out all I could get and going home. But, thanks to your paper, I now fish with a 10-count, 101-foot fly-rod, with a multiplying reel and forty yards of very fine green line, and am getting good sport without caring so much about the number of fish as I do the size of them. I learn something from your paper every week, and it is getting to be a friend that I do not care to be without.—*SEMPER SNAP.*

**BLACK BASS FISHING IN THE BRANDYWINE.**—Bass fishing in this stream has been unusually good of late, and some fine strings have been caught. Mr. John Ingram, a tobacconist, of West Chester, Pa., offers as a premium for the largest black bass taken during the season of 1883 a jointed bamboo bait rod of superior workmanship. There are a number of competitors for its possession. The largest bass reported measured twenty inches, and weighed one and one-half pounds. The west branch affords excellent fly-fishing. The bait employed most successfully is the tadpole, although some of the smaller fish are caught with the crawfish and helgramite. There is no accounting for the varied taste of the black bass of the Brandywine. At times all the above allurements are persistently refused, while the common earthworm is eagerly sought. I can recall a circumstance which happened a few years ago in illustration of this peculiar trait. One of our local fishermen had used all the known bass bait and a great deal of patience without avail. As he was in the act of unjoining his rod, he espied a small field mouse. In a fit of desperation he killed it; attached it to the hook and made another cast. In an instant the cork was out of sight, and after much persuasion he landed a three-pound bass. So much for bait.—*OCCASIONAL.*

**BLACK BASS IN OHIO.**—Newcastle, Pa.—Fishing here this year seems to be a failure on account of rain. It has rained almost three days a week since fishing began, keeping the water muddy. I am told in the fall there is good fishing to be had for "salmon," but as I have just moved here I cannot tell you very much about it. After frost they try the regular bait. While at Trenton the other day I saw several drop on the water, and they had no sooner touched than they were taken by the fish, but I could not tell what kind of fish they were. There were four or five fine bass caught at the old railroad bridge over the Neshaunock yesterday. I am told, that would pull the scales at three and one-half pounds.—*CHAR APPLE.*

**BLACK BASS IN SENECA LAKE.**—Elmira, N. Y.—I have never seen anything about this magnificent sheet of water and the black bass in the Finger Lakes. The fishing does not take place in Seneca Lake until about the 15th of September for black bass, and then they will take the hook until very cold weather. The law in regard to that lake is the same as in other lakes as to black bass, but for some reason or another they will not take the hook until about the 15th of September. A great many fish at night for these fish in the summer, using pieces of pork, white rags, shelled lobsters, etc., for bait, and they have much better success than the day fishermen. One person took the boat moving just enough to keep the hook of his "pard" from getting fast to the stones in the bottom of the lake, and they will fish in this manner all night some nights, and will be rewarded by a handsome string of these black beauties.—*G.*

**POACHING NEAR ALBANY.**—Nassau, Reus-selaar Co., N. Y., July 16.—There is a pond about one mile from the town of Nassau, which was stocked with black bass of the small mouth species, several years ago. I can remember the time when one could go up to the pond of a morning, and take a nice mess of pickered or black bass; but now that is a thing of the past. And why? Because there are certain unscrupulous persons, living on the banks of the pond, who catch the fish as soon as the ice is out in the spring, by netting. Now what I want to know is, could I inform a game constable, without letting the party be the wiser as to who gave the information?—*C. J. V. A.* [If you inform your nearest game protector he can work up the case on his own responsibility, and you need not appear in it.]

**THE KINGFISHERS.**—That jolly party of anglers known as "the Kingfishers," whose camp life has been so delightfully portrayed in our pages, is now in the woods near North Macheson. They left this week for Cheboygan, where they took wagon to camp, some twenty-three miles. They will remain for three weeks, and the big bass are welcoming them with outstretched jaws and empty stomachs, while the nasals are whetting their incisors to sever their lincs. There is a hint that a grayling stream, said to be unknown save to a few "old mossbacks," will be visited, and we are promised an account of their joys and tribulations when they get out of the woods.

**FLORIDA.**—Jacksonville, July 11.—Colonel J. E. Hart is fishing at Fort George and stopping with the genial George Gilbert, of Pilot Town. Yesterday Colonel Hart, with rod and reel, caught four bass of an aggregate weight of 110 pounds. He lost seven beside these and several lengths of line. Good time? Of course he is having a good time. Could you be having a good time if you were catching fish like that?

MR. C. H. MASON'S GREYHOUND DOG "FRIDAY NIGHT."

## The Kennel.

### FIXTURES.

#### BENCH SHOWS.

Oct. 2, 3, 4 and 5, London Bench Show, London, Canada. Entries close Sept. 19. Charles Lincoln, superintendent; John Puddicombe, secretary; C. A. Stone, assistant secretary.

#### FIELD TRIALS.

November 19, 1883.—Eastern Field Trials Club, Fifth Annual Trials, at High Point, N. C. Entries for the Derby close July 1; for the Members' Stake, Nov. 17; for the All-Aged Stake, Nov. 1. W. A. Coster, Secretary, Flatbush, Long Island, N. Y.

November 20, 1883.—Robin's Island Club's second Annual Field Trials at Robin's Island, L. I., for members only. Entries close Sept. 1. A. T. Plummer, Secretary.

December, 1883.—National American Kennel Club, Fifth Annual Trials, at Grand Junction, Tenn. D. Eryson, Secretary, Memphis, Tenn.

### THE BEAGLE CLUB.

LIKE our friend "Briar" I am pleased to note that the admirers of the beagle are beginning to give us their views, but that alone will never establish a beagle club as long as this effort is not vigorously prosecuted. I fear there are a great many among us like our friend "Dorkin," whose minds are filled with doubt instead of being confident of success. Of course if we intend following the example of the cocker men we had better "leave well enough alone." I agree with "Dorkin," and I hope all others do, that the forming of the standard should be left to a small, competent committee, and in my humble opinion three better men than he has named could not be selected. His confidence in friend Elmore, I have no doubt, is shared by all who ever came in contact with that gentleman. If these gentlemen—Dr. Treadwell, Gen. Rowett and N. Elmore—will together decide upon a standard, I have no doubt that all real lovers of the beagle will abide by their decision. If so, then there will be no chance for the bickerings and controversies such as "Dorkin" predicts.

Why should not success be ours? Are the lovers of the "little hounds," whose idleness, courage, devotion, intelligence and affection entitle them to the rank of our best friend, not energetic and strong enough to organize and maintain a club for their benefit?

Now, Mr. Editor, let me beg of you to take this matter in hand, appoint the necessary committees, etc. Hoping you will aid us, we thank you for the interest shown in our cause on previous occasions.

WRIGHTSVILLE, Pa., July 13, 1883.

### LONDON (ONTARIO) DOG SHOW.

THE third International dog show, which has been fixed to take place on the 2d, 3d, 4th and 5th, October next, during the week of the Great Western Fair, promises to be a great success.

The committee will soon issue a very liberal premium list, besides a large number of special prizes have already been contributed.

The Fair Association have generously placed at the disposal of the committee a large and commodious building for the purpose of holding the show, which is admirably suitable for a show of this kind, being both well lighted and ventilated, besides the exercising ground is unlimited.

It is the desire of the committee to make this show in character what it is in name—International—and cordially invite all owners of dogs from the United States to make exhibits, and to those visiting the show, their time will be endeavored to be made as pleasant as possible.

The judges appointed are Mr. John W. Munson, of St. Louis, for setters and pointers, and Mr. James Mortimer, of New York City, for all other classes.

The entries will close on September 19, and the premium lists will be ready for distribution by August 1, copies of which will be sent you for distribution.

CHAS. LINCOLN, Supt.

### FRIDAY NIGHT.

FRIDAY NIGHT is a black greyhound dog with some white on chest and feet. He is 18 months old, and is by Master's Prince out of Mr. J. H. Salter's Sally, both well known in the coursing field. He is owned by Mr. C. H. Mason. He was imported last spring, and shown in public at the recent New York show, where he won first in the open class, and the Lotz-Dawson challenge gold medal. He also won first at Chicago last month. Friday Night is of medium size, very well balanced, with a racy appearance that takes the eye at once. He is an elegant easy mover, and is said to be very fast. He is from a sketch by Harry Tallman, and is an excellent likeness.

### THE ULMER OR GREAT DANE.

SINCE the non-sporting dogs have become fashionable, your enterprising journal has given not only true delineations of the most important breeds, but also some very faithful woodcuts. I think with Mr. Adcock, of London, and many others who have had occasion to study this breed, that the great Dane, or, as the Germans call him, the German dog, has a right to rank with the English mastiff and St. Bernard, not only in nobleness of appearance and carriage, but as regards intelligence and affection. In England he is beginning to be appreciated, and ranks highly in Germany, at Aix, and in Prussia.

At the recent conference in London, for the purpose of organizing a Great Dane club, a deputation was sent to Vienna there to meet the German recognized authorities and adopt a set of rules, and get the correct points, etc., of the breed.

Through a private letter received by me recently from an enthusiastic breeder and fancier of the great German dog, Prince Albert Solms of Braunfels, Prussia, I received a copy of the recognized standard, taken verbatim from the German National Stud Book, as follows:

#### THE GERMAN DOG.

By accepting this name, the usual denominations Danish dog or Ulmer dog have to be dropped.

1. *General appearance*.—The German dog is not so heavy and clumsy as the mastiff or bulldog, and at the same time his form is not so slender as the greyhound. His appearance should be exactly the middle between the two. He is large, of powerful build and elegant figure. He has a proud step and haughty attitude, with head carried high. The tail is generally bent downward or horizontal, and only slightly curved.

2. *Head*.—The head is moderately long, and more high and compressed at the sides than broad and flat. The forehead, in profile, seems to be only a little higher than the bridge of the nose and gradually rising toward the back. Seen from the front the forehead is not remarkably broader than the muzzle, which is very well developed. The muscles at the angle of the mouth are also well developed. Nose large, with the bridge a little curved. The lips are nearly straight, docked in front, and on the sides somewhat projecting. The lower jaw is neither long nor short. The eyes are small, round, with a sharp expression, the brows well developed; ears middling large, set high on the head, if cut they are pointed.

3. *Neck*.—The neck is long, powerful and slightly arched, gradually increasing in size from head to shoulders without throatiness.

4. *Chest*.—The chest should be broad and deep with the ribs well sprung. Belly small.

5. *Back and Loins*.—The back is long and straight with loin well arched. Croup short and handsomely sloping to set on of tail.

6. *Tail*.—The tail should not be too long, hardly reaching the hock. It is broad at the root and tapering to the end and slightly curved.

7. *Forelegs*.—The forelegs should be diagonal to the shoulders and perfectly straight and strong, with the upper arm muscular.

8. *Hindlegs*.—The thighs are muscular, with the lower leg strong and long and bent like a greyhound's.

10. *Feet*.—The feet are round, turning neither out nor in; toes closed and well arched, nails strong and curved.

11. *Coat*.—The hair is very short, fine and thick, with no long hair upon the under side of the tail.

12. *Color*.—A—Like flames. Ground color, golden brown, yellow, slate, iron color, or ash gray, but always with black, irregular cross lines of one color. B—Yellow, slate, ash gray, silver gray, or entirely of these colors, with a darker shade around the eyes, mouth or on the back, further entirely black. The yellow color alone is not fancied, nor are white spots. The nose is always black, with dark eyes and nails. C—Spotted or tiger dogs. Ground color, white or silver gray, with black or gray irregular spots.

The above exact translation was kindly rendered by Mr. Louis Solms, of the Austrian Consulate, this city, an accomplished linguist.

Prince Solms also sends me a large photograph of the champion German dog, Dr. Caster's Leo. He stands thirty-two inches at shoulder, and is straight and graceful as any terrier; weighs 160 lbs. This dog is worthy of a place in our kennels, has been much abused and distrusted under the name of "Siberian bloodhound," etc.

Any further information on this subject will be gladly given if in my power.

E. P. HODGES.

PITTSBURGH, Pa.

### THE BELFAST SHOW.

Editor Forest and Stream:

I send you marked catalogue of our recent Belfast show. There was nothing new shown that was especially new except Rex, the first prize pointer, a really good liver and white. He beat the celebrated red Irish Garryowen, as well as the black spaniel champion Zulu, for the challenge cup for the best sporting dog in the show. I understand that his owner claimed him at the catalogue price (£30). This I consider a very low figure for him. With the exception of the Irish terrier and red Irish setter classes, which were good, there was nothing worth mention.

Following is a list of the awards in the pointer and setter classes:

POINTERS.—1st and Newry challenge cup, D. Richardson Coates's Rex, 3yrs. smos. (Col. Campbell's Oscar—Baltimore Belle); 2d, G. Arthur Coates's Domino V. (little brother to Rex); 3d, Adam Clarke's Rex, 1st 4yrs. (Bravo—Juno). High com., E. J. B. Buckle's German II, 2yrs. (Shot—Belinda).

SETTERS.—Champion—James J. Giltrap's red Irish dog; Garry Owen, 4yrs. smos. (Baltimore Belle).  
IRISH SETTERS.—1st, R. A. Wilson's Box, 4yrs. (Red Rocket—Dora); 2d, T. M. Hilliard's King Richard II. (Count—Cister Queen); 3d, James J. Giltrap's Lady Palmerston II, 3yrs. smos. (Palmerston—Lizzie). Very high com., Edward Higgins's Red Queen, 3yrs. (Rocket—Cay); Win. Elliott's Blarney, 3yrs. (Brace—Stella); John Redcoat's Rosey, 3yrs. (Brace—Kate); Thos. Erwin's Red Maid, 3yrs. smos. (Red Grouse II—Peggy II.). High com., Edward Higgins's Baltimore, age and pedigree not given; G. St. G. Tyrer's Frog, 3yrs. (Terry—Ely); A. F. Nuttall's Reuben and Leo VII, 3yrs. (Grouse II—Colleen Rhin). Com., T. B. French's Parrell, smos. (Roger's Palmerston—Quail); Wm. J. Smyth's Parrell II, 3yrs. (Shot—Chloe); Thos. Erwin's Red Dash, 3yrs. (Red Rock—Sappo); Thos. Erwin's Colleen Bawn, 3yrs. (Brace—Stella).

SETTERS—ANY OTHER BREED.—1st, Joseph Boyle's Count Walder see, 3yrs. (Rock—Dream); 2d, R. Chapman's Dye II, 3yrs. smos. (Don—Kate); 3d, R. Chapman's Heather Jock, 10mos. (Harry—Ranger—Bell). Com., Thos. Kirk's Star, 3yrs. (Shot—Luna). G. Belfast, June 25.

### BANG BANG.

THE pointer dog Bang Bang, recently purchased in England by Mr. G. De Forest Grant, for the Westminster Kennel Club, arrived last week on the steamship Erin. We like his appearance very much. He is an orange and white of medium size, very well put together, with capital legs and feet. He has no weak points, but is good all over, and we have no doubt will prove a valuable acquisition to the club as well as the breeders of this vicinity. It is the intention of the club to run him at the Field Trials next fall. The liver and white pointer bitch Moonstone, owned by Mr. Grant, also came in the same steamer. She is half sister to Bang Bang, of medium size, well built, and looks a worker. She will be bred to Senation.

## ST. CLARE BYRNE.

by Mr. Wash. E. Connor, will be sailed last week in August. Open yachts 21ft. and upward. Smaller boats may enter at that measurement. Course to be at least one-third to windward. The Pfaff Cup will be sailed for at same time and under same conditions.

**SMALL YACHTS.**—The Beverly Y. C. restricts its open races yachts under 50ft. The club is the only one which has in its by-laws a rule restricting the size of yachts eligible to enter the club races.

**FLYING STARTS.**—Starting to one gun with time taken from the gun is now practiced by the Dorchester, Eastern, Hull and Beverly Y. C., and also by the Boston City Regatta, authorities as well as by some of the smaller clubs. As yachtsmen become accustomed to this smart way of starting it seems to be growing in popularity.

**UTOWANA.**—The new steam yacht building at Chester, Pa., for Mr. W. E. Connor, was launched Tuesday. She is 138 ft. over all, 12 ft. 6 in. loadline, 30 ft. 6 in. beam, 11 ft. 7 in. hold, with 8 ft. 3 in. draft. Compound levered engines, two cylinders 13 in. and 20 in. x 13 in. stroke. Horizontal tubular boiler 92 ft. 11 in.

**NEW MEASUREMENT.**—The sail area and length rule has now been adopted by the three principal clubs in the country, the New York, Eastern and Six Weeks Clubs. The Beverly will also sail the open race for first class under the rule, and several other clubs are about to adopt the new fourth.

**BOSTON CITY REGATTA.**—In the four class Meteor and Hand Threes made a dead heat of 14 to 15 minutes of seconds. They will divide the prize money for first and second yachts.

**ARLINGTON Y. C.**—This Baltimore club, the only one of that city, leaves August 4 for an extended cruise down Chesapeake Bay. Fleet to be gone two weeks.

**VALKYR.**—This compromise cutter is at the yard of Pollons, Brooklyn, receiving a new racing outfit, larger spars, 6 ft. more gaff and 5 ft. more bowsprit. With this rig she will, no doubt, give a good account of herself. We should like to see her shed the board and add 8 or 10 in. lead underneath the keel.

**OFF CRUISING.**—There has never been a time when so many of our yachts were away on cruises as at present. It is supposed that they go early this year so as to get back for the great regatta of the Beverly and Hull yacht clubs, August 18 and September 1. —*Boston Courier.*

**FINE CUTTER.**—D. J. Lawlor has just finished for Lynn owners a very handsome thoroughbred. She has been named *Orion*. Over all 34 ft., beam 7 ft. Outside iron 2,100 lbs. Same builder has also finished the *Cypress*, 35 ft. 6 in. This yacht is varnished instead of painted.

**IRON LACQUEE.**—Three pounds asphaltum, half pound shellac, one gallon turpentine. Varnish for iron work may be made by dissolving in two pounds of tur oil, one-half pound asphaltum, and one half pound powdered resin. Mix hot and apply cold.

**LARCHMONT MATCH.**—In the race, July 4, the protest between Fanny and Gracie was decided in favor of the Fanny. She takes Corner cup, subject to conditions, also regular cash prize of the club.

**OPEN BOAT RACE.**—The owners of the open boats, Mistake, Snoozer, Susie B. and others met at John Sawyer's loft, 83 South Street, last Friday, and settled upon a sweepstakes race for Monday, August 27, entrance money per boat \$100.

**ARROW.**—This sloop, recently bought by W. P. Douglass, N. Y. Y. C., has been overhauled at Mumm's yard, Fifty-fifth street, South Brooklyn, and will go into commission in time to join the cruise of the New York Y. C.

**DREADNAUGHT.**—Mr. A. W. Nickerson will cruise to the eastward from Boston in the schooner Dreadnaught. She has been newly coppered and received a new fit of sails from Wilson's Sons, of Port Jefferson.

**HULL Y. C.**—Cruise to New Bedford and other ports will be undertaken July 28. The fleet will meet the Atlantic Y. C. in New Bedford.

**CRUISING.**—Sloop Mystery, N. Y. Y. C., Mr. W. B. Parsons, arrived at Halifax, July 17, and will remain a few days.

**NYFFA.**—Mr. J. L. Wall has changed the name of his keel sloop Glyam to Nyffa.

**NORNA.**—This schooner left Halifax for New York Thursday, July 13.

## —THE MILD POWER CURES.— HUMPHREYS' HOMEOPATHIC SPECIFICS.

Established 30 years. Open Evenings. J. F. MARSTERS, 55 Court St., Brooklyn.

## Shields' American Improved Gut Leader or Casting Line.

All fishers will readily see the advantage there is in using them. The easiest way to apply a fly or to remove it without impairing the strength or durability of the leaders. Lengths, 3, 6, and 9 feet. Made of superior silk worm gut, in all varieties. Fine trout, salmon and bass flies, and waterproof silk lines. JOHN SHIELDS, Brookline, Mass.

REVISED EDITION.—AMERICAN KENNEL AND SPORTING FIELD, by Arnold Burges. Price \$3.00.

This very popular book has been entirely rewritten, greatly enlarged, and brought up to the times in all that relates to the broad field which it covers. It is profusely illustrated with cuts of the most celebrated dogs and sporting scenes, treats thoroughly of breeding, breaking (including "Force in Retrieving"), kennel management, selection of dogs, and all that relates to kennel and field work, making it the most comprehensive and useful book of the kind before the public.

For sale by ORANGE JUDD CO., or C. T. DILLINHAM, New York, or D. S. HOLMES, 30 Fourth St., E. D. Brooklyn.

## KYNOCH'S Patent "Perfect" Brass Shells,

MANUFACTURED BY

KYNOCH & CO., Birmingham, Eng.

These shells are made of extra fine thin phable metal, with reinforced base; are adapted to either Winchester or Wesson No. 2 primers. (Can be re-loaded as often as any of the thicker makes. Cost only about half as much. Weight less than paper shells. They shoot stronger and closer, and admit of a heavier charge, as owing to the thin metal, inside diameter is nearly two gauges larger. Load same as any brass shells, using wads say two sizes larger than gauge of shells. Or can be effectively crimped with tool as represented in cuts) and straighten out to original shape when discharged. The crimping tool also acts as a reducer, an advantage which will be appreciated by all experienced sportsmen. Sample shells will be mailed (without charge) to any sportsmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or shells in case lots only, (2,000), and crimpers not less than one dozen, by

## DOG TRAINING;

—BY—

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

FOR SALE AT THIS OFFICE PRICE \$1.00.

# AMERICAN Kennel Register.

A monthly record of kennel events for the information and guidance of breeders, exhibitors and owners of all breeds of dogs.

Its leading feature is the "Pedigree Register," of sporting and non-sporting dogs, which makes it the only complete Stud Book issued in America. A register number is given to each dog, and an index will be compiled at the close of each annual volume, thus forming a permanent work of reference. The pedigree registration fee is twenty-five cents. The first two numbers of the Register contained the pedigrees of 138 dogs.

Departments are also provided for the registration of stud visits, dogs at stud, births, sales and transfers, dogs at sale, and deaths.

Prize lists of all the American shows will be given, with descriptions of the principal winners and dogs exhibited; also prize lists of important shows abroad. This department will include a record of field trials. The first two numbers of the Register contain prize lists of Washington, Ottawa and Pittsburgh shows.

The publication day is the fifth day of each month; and nothing can be received for publication later than the first day of the month. All matters intended for publication should be in the hands of the editor at the earliest practicable date. Entry blanks for each department will be furnished free on receipt of stamped addressed envelope.

TERMS:—Issued by yearly subscription only. The subscription price is one dollar per year. Make drafts and money orders payable to the Forest and Stream Publishing Company. Address, AMERICAN KENNEL REGISTER, P. O. Box 2,832, New York City.

## The Parker Trap Gun.

We are now prepared to supply the Parker "Trap Gun," for which we are sole agents. These guns have top lever, extension rib, rebounding locks, large strikers and pistol grip. They are simply superb. The Parker Trap Gun should not be confounded with the regular Parker top lever guns, which, although excellent guns, differ materially from the Trap. Every genuine Parker Trap Gun has the rubber butt plate with a flying pigeon beautifully embossed upon it, as shown in the above cut.

We have a small remnant of Welley's heavy ducking guns, mostly 10-bore, of various qualities, at about half price. Address: **H. & D. FOLSOM, 15 Murray Street, New York.**

## THE FOX GUN.

Secure one at once at our **REDUCED PRICES**, which will continue only for a short time.

**American Arms Co.,**  
103 Milk Street, Boston, Mass.

## GOLD PENS.

PENCILS, HOLDERS, CASES, &c.

### THE CALLIGRAPHIC PEN.

A GOLD PEN AND RUBBER HOLDER, containing ink for several days' writing. Can be carried in the pocket. Always ready for use. A luxury for persons who care to preserve their individuality in their writing.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, and kindred subjects, than is contained in all other American publications put together.

## TEN YEARS.

WITH this issue the FOREST AND STREAM completes the first ten years of publication. Next week, that being the paper's eleventh birthday, we shall review some of the many changes which have taken place in those years. The number will be an interesting one, containing contributions, congratulatory and otherwise, from many familiar pens, among them those of Al Fresco, Awhawsoe, Balsam, Nathaniel H. Bishop, Didymus, John Dean Caton, Cecil Clay, Elliott Cones, Forked Deer, Theodatus Garlick, J. A. Hen-shall, Hix, H. P. U. Jack, Jacobstaf, K. (of Worcester), Kingfisher, M. (of Boston), Maj. H. W. Merrill, Wm. B. Mershon, Nessmuck, Penobscot, Piscos, Podgers, Reingolds, Robt. B. Roosevelt, S. Von W., Corp. Lot Warfield, Wawayanda, Yell—thirty-one, with others yet to be heard from.

## DEFEAT OF THE TEAM.

THE American team has suffered a defeat, and for the second time the English military shooters have established their superiority in a formal match test. It can hardly be said that this outcome of the competition is a surprise. A year ago defeat was certain for the American team, this year there was a chance of victory for the visitors, though the probabilities were against them, and after a good fight, with some very encouraging features about it, Colonel Howard and his men came home to impress upon American riflemen that, though much has been done for the development of rifle practice and the improvement of small arms in this country, yet our advance has been irregular, and that in certain very essential lines of the art and science of rifle shooting we are still behind our British friends.

To the story of the match we give ample space in our rifle columns. There it is told how a tempest of rain and wind came down upon the common while the match was in progress, how these squalls and showers were broken by floods of bright sunlight, how the wind came from various quarters of the horizon, and in such a quick succession of changes that it appeared to the bewildered Americans as if the cave of

the winds had opened on all sides. It was, in fact, such a day as Creedmoor never has and Wimbledon but seldom. The Britishers were somewhat used to such conditions of sky and air, and so the sooner caught their bearings in the skirmish of the elements, and managed to get out of the match in advance of the strange team.

There has been talk of inferior rifles in the hands of the American marksmen, and the cable dispatches, reflecting the opinion of the English ranges, have placed special stress upon this feature. It appears to us to be not well founded, for had there been a change of weapon, and the Metfords of the English team placed in American hands, and *vice versa*, we doubt not that the victory would still have been to the team whose members were best able to catch the real strength of that rush of crosswinds, and who could best fix their elevations for the dark, moisture-laden atmosphere. No doubt the American rifles placed the bullets just where they were aimed, but had judgment was shown in estimating the meteorological conditions and in formulating their influence in so many points on wind-gauge and elevation.

The match passed off in good shape so far as freedom from any misunderstandings were concerned. It was, so far as the wire informs us, a fair fight for the American militiamen not against their very friendly antagonists, the English team, but against that very uncertain and treacherous foe, the fickle weather. We are not informed upon what basis Col. Howard made his selection of the final shooting twelve, but no doubt there were good and sufficient reasons for making such choice as he did. It is not likely that any other arrangement of the men would have brought about any different result. The strength of the American squad was fairly set forth in the twelve men who went to the firing points.

The match in its results is full of encouragement to the N. R. A. and to American rifle interests generally. As compared with the results of last year we have been able to show a positive advance. The lesson of last year has not been thrown away, and to-day we have a fund of information, of experience and practical knowledge on the points of the military breech-loader as known at Wimbledon, where two years or more ago we were entirely ignorant. At the lower and more distinctively military service ranges the Americans proved that they were in rifles and ability not a whit behind their expert adversaries, but rather superior, yet the difference was slight, hardly more than the general luck of battle would leave between two well trained and evenly matched contestants. We have, indeed, in two years produced a gun which will shoot round after round without cleaning, and we have secured a body of men able to use that weapon with fine precision under all the conditions of weather to which we are accustomed here. The match days brought Colonel Howard and his men face to face with new conditions, to meet which they had no data in their score-books, and consequently they could only flounder about, making such efforts to reach the target as their general knowledge of rifle shooting suggested. The Englishmen may well note this significant fact, that our men are rapidly closing up the gap between our neglect for years and their two decades of most thorough and careful practice at Wimbledon and its many subsidiary ranges. There are even in misty, muggy England days when the sun shines out so clear and bright that our boys might imagine themselves at home at Creedmoor, or Bennings, or Brinton, or Walnut Hill, and then perhaps the figures of the totals may tell a different story.

It is, perhaps, too early yet to speak of the match in a critical way. The scores would seem to show that there was a lack of team system at the extreme range among the members of the defeated side, but until mail advices bring more full particulars, it would be well to leave this point of the match without discussion. There was the usual chapter of accidents, such as planting good shots on the wrong target, but these accidents did not change the final result. The Americans were whipped, not by any fluke or unaccountable slip-up, but fairly and squarely because they were over-matched in pitting their brief experience against the shooting drill which has been going on for so long a time abroad. They struck more weather to the square inch at Wimbledon, than Creedmoor ever dreamed of having.

There is no talk yet of another match. This is right. Let us first get our team home, learn from them exactly what is to be done for improvement, and then during the winter there is ample time for such correspondence as may lead to a continuation of the series of competitions, but with conditions so fully drawn that no misunderstanding may creep in. The defeated ones deserve a hearty welcome home. While they may not have accomplished all that was hoped, they

have surely done all that could be reasonably expected of them. They encountered tremendous odds with a natural consequence.

We present to our readers not only a full account of the match, but a series of diagrams showing where each shot fired struck the target slab. The New York *Herald*, with its accustomed enterprise, gave its readers early representations of the targets in fac simile, and before the last shot had been fired on the English range the public in New York were looking at the targets made in the earlier part of the match. Our diagrams give the shots numbered in their order of hitting, reproducing, in fact, the record of each marksman's score book.

There is but one little gleam of consolation, and that is in the fact that while we were whipped in the International match, our old friends, the Irish small-bore men, seized the occasion to once more enjoy a victory in the Elcho Shield match.

## SEEING THE YELLOWSTONE PARK.

THE completion of the Northern Pacific Railroad to Bozeman, has opened the National Park to the world. Men of all professions are hastening thither, urged on by the natural ambition to be among the first of the general public to behold those natural wonders, of which so much has been written since their discovery, and which, during the progress of the fight against the attempt of a stock company to capture the Park last winter, were again brought prominently before the people. The projectors of the scheme for seizing the Park have inaugurated a great excursion thither; another made up of prominent Northern Pacific people is in contemplation, and a host of smaller parties will scatter themselves about over the Park, and enjoy its beauties.

More important than any of these, from the standpoint of the friends of the Park, and so of the people, is the party which is to enter the Park from the south. This will be under the command of Gen. P. H. Sheridan, and will include among its members President Arthur, Secretary Lincoln, Senator George G. Vest, Surrogate Rollins of this city, and Governor J. Schuyler Crosby of Montana. Early in August they will leave Green River Station on the U. P. R. R., and proceed thence to Ft. Washakie, where they will take their pack train and go into the Park, and through it northward to Livingstone, Montana, whence the Northern Pacific R. R. will bear them eastward once more.

No doubt they will have a good time, will catch a lot of fish, and, without the boundaries of the Park, kill some game. But the important point of the excursion will be that members of the Government, whose influence should be strongest in shaping legislation on this important subject, will be able to see for themselves a part of the needs of the Nation in respect to the Yellowstone Park. It is impossible, of course, in a hasty trip across such a wide area, to appreciate all that is required in the way of provision for the protection of the Park and its interesting features, whether organic or inorganic, but intelligent men cannot fail to acquire much useful knowledge, especially when they go accompanied by one who is so familiar with a considerable portion of the reservation as is Gen. Sheridan.

We have urged this subject on Congress because we know that it is something that ought to be done, and because the longer it is delayed the more difficult it will be to accomplish it, and the more it will cost. Those who oppose it are as a rule men who are quite ignorant of the subject, while all who are most familiar with the Park and its capabilities are agreed that it is a matter which demands the prompt attention of Congress. This year a greater number than ever before will feel its importance and be able to speak intelligently on the subject.

We believe that the importance of enlarging the Park will at once impress itself upon these visitors, and we trust that the need of such enlargement will be so clearly seen, that a recommendation concerning it may form a part of the next message of the President to Congress. This extension of the Park's boundaries should be made both on the east and the south. On both sides there are wonders which should be preserved to the people at large, and the setting aside of these additional tracts can be done now without interference with the rights of any citizen. There are a few cattle men within the region referred to, but their claims can be bought out for a few thousand dollars, an expense which should not be considered when the importance to the country at large is realized.

We hope most earnestly that within a year the boundaries of the Park may be so extended as to include the territory lying east of it to the 109th meridian, and on the south to lat. 43° 30'. We should then have a park in which every

American might take a just pride, and one which for beauty and interest is unparalleled. The wonderful lakes and mountains to the south of the Park, Jackson's Hole, the Tetons and a hundred other beautiful spots should be saved, and so too should the heads of the Stinking Water and a dozen other streams, each of which could put forward its special claim for protection from the touch of civilization's hand.

The gentlemen who are about to visit the Park are incurring responsibilities in the matter which we are glad to see them assume, for we are confident that this pleasure-trip will, next winter, in Washington, bear abundant fruit.

#### NEW YORK GAME PROTECTORS.

AS our readers are aware, from our reports of the progress of the Game Protector bill in the Legislature of New York last winter, the Governor of the State was empowered to appoint sixteen new protectors in place of the eight which held office last year. A clause in the new bill placed these men entirely under orders of the Fish Commissioners of the State, from whom they are to receive instructions and to whom they are to report in writing every month. Without the proper certificate from the Fish Commission the game protectors can receive no pay.

The men appointed are all new ones, except John Liberty, of Essex county, and Geo. M. Schwartz, of Monroe county, and we hope that they will do their duties well. We have been importuned to make recommendations for this office, or to indorse them, but have steadily declined to do so, not caring to become responsible for the performance of the duty in the case of any individual. We are therefore free to applaud or condemn, as the work done may seem good or bad.

The protectors are appointed for certain districts this year, and not for the State at large, as last year. How this will work, unless they have full powers all over the State, we do not know. For instance, Oneida Lake, which lies wholly in Oswego county, where the Onondaga Club fishes a great deal, lies in the ninth district, and the protector of that district lives nearly forty miles east of it, while the protector of the tenth district, a man whom the club indorses, lives within six miles of the lake, which is infested with poachers whom he has fought for years. If a protector has powers outside his district this will work well, but if he has not, then in this instance a mistake has been made. The appointments are:

First District—Kings, Queens, Suffolk, and Richmond Counties—George A. Whitaker, Southampton.

Second District—New York county—Joseph H. Godwin, Jr., King's Bridge, New York city.

Third District—Westchester, Putnam, Dutchess, Columbia, Ulster, Greene, Rockland, and Orange—Matthew Kennedy, Hudson, to take effect August 1.

Fourth District—Sullivan, Delaware, Schoharie, and Otsego—Francisco Wood, Schoharie.

Fifth District—Albany, Schenectady, Saratoga, Rensselaer, Washington, and Warren—Seymour C. Armstrong, Weavertown, Warren county.

Sixth District—Essex, Clinton, and Franklin—John Liberty, Elizabethtown, Essex county.

Seventh District—St. Lawrence and Jefferson—Albert M. Griffin, Pine, St. Lawrence county.

Eighth District—Fulton, Hamilton, Montgomery, and Herkimer—Thomas Bradley, Rockwood, Fulton county.

Ninth District—Oneida, Lewis, and Oswego—Nathan C. Phelps, Remsen, Oneida county.

Tenth District—Broome, Chemung, Cortland, Madison, Tioga, and Onondaga—William H. Lindsley, Canastota, Madison county.

Eleventh District—Cayuga, Wayne, Ontario, Yates, Schuyler, Tompkins, Chemung, and Seneca—Aaron M. Parish, Reading, Schuyler county.

Twelfth District—Monroe, Orleans, Livingston, Genesee, Steuben, Wyoming, and Alleghany—George M. Schwartz, Rochester.

Thirteenth District—Chautauqua, Cattaraugus, Erie, and Niagara—Stephen A. Roberts, Buffalo.

Mr. Lindsley, of the tenth district, has for some years been a town game constable, and has acted with Mr. Dodge, a former State game protector, and has been repeatedly shot at by the persistent poachers of Oneida Lake. He has built a steamboat for the express purpose of clearing this lake of nets, on the promise of being appointed a State officer for the protection of fish and game in a region which was supposed to be in his district. Knowing these facts we hope that the Fish Commission will extend his authority over Oneida Lake.

THE CENTURY MAGAZINE is rendering good service to field sportsmanship in America by its admirable sketches of shooting and fishing. The engravings in the July number accompanying Dr. Henshall's paper on the black bass were not only artistic but excellent in their faithfulness to nature; and the same may be said of the beautiful illustrations in the August number, of Prof. Alfred M. Mayer's excellent description of "Bob White, the Game Bird of America." The engravings and the letter-press combine to make a very charming study of this favorite bird. It is an open secret that the Century Co. will soon publish, in book form, a collection of their magazine articles on field sports.

## The Sportsman Tourist.

### DRIFTING FOR SHAD.

"WHAT are you going to do to-night? Will you come out with me for shad?"

Such was the compound question which my friend James, the impetuous, hurled at me. I came up the wharf after having a cooling dip in the noble St. John.

"Well, nothing particularly; and, yes, I should like to go, very much."

It is a curious fact, that while game birds and animals retreat before the advancing white tide of civilization, fish are more constant to hereditary haunts, and inhabit their ancient waters until driven therefrom by the defilement of the stream, or actually displaced by the impudent angler. But, while the defilement of streams drives away some fishes, others, such as the eel, thrive on the garbage and refuse of cities. This is scarcely an example of "the survival of the fittest." Of course, the different elements in which beasts and fish live account somewhat for the coyness of the first, and the friendly constancy of the latter. As the land becomes settled the animals have to retire to more secluded haunts, but the eels, living in an element whose domain cannot be so thoroughly invaded by man, are exempt from the necessity of beating an unqualified retreat. But while this is true, I hold that the fish, of its nature, is far tamer than the beast of its. While our forests and plains for miles round any considerable center of civilization are entirely deserted by their old time frequenters, our rivers and streams are still well stocked with the descendants of their primal occupants, undisturbed by the thunder of mill wheels, the gliding, dark hulks of commerce, or the panting saw mills, which, like wrathful giants, hurl the spoils of depleted forests upon the uncomplaining tide. Thus it is that in the St. John River, at Fredericton, the capital of a populous Province, we still find the perch, chub, smelt, pickerel, shad, cusk, gizzard, bass, salmon, sturgeon, and many other fishes, and, in a short distance of the city, the haunt of the intangible waters—the speckled beauty, the rainbow-hued trout. But let us drift back to our drifting.

"Yes, Jim," I replied to the hydra-headed interrogatory, "I should like very much to go." And so we went down behind the wharf where the boat lay ready to receive us, and where the entangling net hung over its saddle where it had been dropped in the sun. After Jim had placed the net and a mysterious little basket on board, we seized the oars and pulled for our destination about a mile above the city, and almost abreast of that aristocratic mansion, Government House. Think of it! drifting for shad within a stone-throw of the gubernatorial residence! Is it possible that the humble shad is growing aristocratic? No, I scarcely think so. He is a Conservative, such a good Conservative that he will ever be a liberal under a glorious sky, bears manly, unaffected manners, the goodly customs, and the glorious liberties of his centennial forefathers. He frequents these waters merely because he has ever done so, and he cares not whether castle or cottage, court or crib, stands on the banks of the placid river.

The St. John at Fredericton is not far from a mile wide, and this evening its broad, unrippled surface, which reaches far toward the shore, was a vision above the water. Boats bent on errands similar to ours. Each boat confines itself to a certain locality—its own domain, as it were—the same spot where perhaps for years and years the fisherman has cast his net, and the desertion of which he firmly believes would be attended with disastrous results. He knows the old ground, just where the snags lie, and these he can locate as correctly as if they were visible above his head. Perhaps he has spent many hours in removing snags from the bed of his favorite drifting ground; and when many boats are out all good fishermen will respect his claim. At times, when but few boats are out drifting, a fisherman will desert his usual ground, if the fish are coy, and casting his net in waters new, make a long sweep of the river, his distances being curtailed only by the locality of his home, and the necessity of having to breast the current in rowing back. But when he dips his net into strange waters, he is in danger of having his net caught in snags or obstacles of the locality of which he may be ignorant. There are spots in the river here where no boat is ever seen to drift, not because there are snags lying darkly concealed to lead the net, but because, as the fishermen aver, the shad never run there. From some peculiarity in the locality, some formation of the bed of the river, or other cause, the fish are known to pass through those places in numbers sufficient to repay the trouble of casting the net.

Here, off Government House, James, and his father before him, have fished for years; here the shad, from some cause best known to themselves, run within well-defined limits, which said limits are well known to the honest James; and here the net may drift slowly, noiselessly as a shadow, without let or hindrance of any snags or other dangers of the deep. There is one large sunken log at the lower end of James's territory, but this monster is repaid by the producing of many carefully studied lines springing from well-known corners, chimneys and trees in the distance, and from closer but less accurate points on the shore, by an instinct which would guide my friend's course when these landmarks were invisible, this monster is spotted. His hair is as well known, and he is as carefully avoided, as if he were a floating torpedo, ready, on impact, to blow us and all other little fishes, sky high, and transform us into veritable flying fishes.

Here, off Government House, James casts his net carefully into the water, while I row the boat athwart the tide, "going on" or "holding on," "up stream" or "down stream," as James commands, and as the proper extending of the net requires. Our net now extends from the stern of the boat in a straight line of bobbing buoys, thirty or forty yards across the current. James sits in the stern with his hand on the rope. He says he can tell by the motion of the net, which he feels in the rope, when a fish is entangled, even in the uttermost meshes.

We float quietly down, talking in but subdued tones, and when near the end of our run, James hauls in the net. Only one fish, but the one we wanted, came along with us, and so while James overhauls the net, I row up to our usual starting point. Again the net is cast; again we drift over the accustomed ground, and again eagerly and in great expectation is the net hauled in. Fifteen this time! That's better! And still we feel that other nets on the river this evening must be accomplishing more work than is ours. We will try one more cast.

It is getting to be quite cold, and when I make an ob-

vation to that effect, James produces his mysterious basket and takes therefrom a small fish, which he hands to me. "What is it?" I inquire.

"It is one gill of Jamaica, one gill of water, and some lemon-juice."

"Good! A little of that will keep out the cold. Good health, James!"

James has also some sandwiches, and pulling to shore, we make fast to a raft and enjoy our collation.

James is a great talker, and many and wonderful are the tales which he has related, both when out fishing, and also at divers other times and places. He is a firm believer in the powers of the mineral rod, and he hints darkly at having tested his capabilities on the fish-weak, near the city, in search of hidden treasure supposed to have been buried in the dark ages by darker dyed pirates. The old French frigate which lies deeply imbedded in the sand, keel up, in its eternal dock-yard at the bottom of the river, opposite the city, has ever been a source of curiosity and regret to James. If he could only raise that hulk, what vast treasures he would discover! Why did no one ever make the attempt?

Another sunken vessel lying in the Nashwaakiss in, as he says, a hole so deep that no one can find bottom, is also matter of wonderment and anxiety on James's part. He is ever promising himself that some day he will, &c., but treasures and vessels remain undisturbed, and I cannot compel myself to hope that the deserving James will ever be enriched by such phantom wealth. Having finished our lunch, we pulled again to our starting point, and, casting the net drifted slowly down, and patiently awaited the result of this, our last venture for the night.

"How many?"

"Eleven."

"Not bad at all!"

And now we start back to our place at the wharf whence we came. As we proceed down river we meet or overtake other boats still plying their trade, and make inquiries as to their luck. When one lone fisherman acknowledges having secured a smaller number than fell to our share, we immediately become possessed of the idea that we are great fishermen; but our exultation is short-lived, for the next man we greet informs us that he has caught forty-five! We pass away silently, and forbear making inquiries of any other boats. Arriving at our landing we hung the net on its rack, and James placed it in a wheelbarrow for transportation homeward, a accepting six, which left twenty-eight at James's disposal. Probably he sold about twenty of them next day, at ten cents each. As we said good-night, I could not help thinking that casting the net for the treasures of the deep is somewhat more profitable than carrying mineral rods over the country in search of the shadowy treasures buried in unknown ages by phantom pirates. I did not say so, however, for I would not offend James for the world. It was two o'clock when I got home, and placing my shad in a tub of fresh water I left them to await the tender offices of the cook.

FREDRICKTON, New Brunswick.

#### COBB'S ISLAND.

DOUBTLESS many of your readers are now casting about them for a pleasant summer trip, and are anxious to find a place where good fishing and shooting can be had, and where a millionaire's pocketbook is not required to pay expenses. I have just returned from such a place—Cobb's Island—and have had most excellent sport.

On Friday last, with a friend, we shot over stools eighty grayback snipe, and would have killed more had we been in practice. This bird is now returning from the north, and within a week or two days myriads of them will be found on the island mentioned. The fishing for weakfish or sea trout is superb, the writer and his friend having taken over 100 lbs. in one tide, and only desisted from very weariness. As an apology for catching so many, I would add that we fished for a boat's crew of thirteen persons. Any person going to Cobb's for fishing should take with him an ordinary rod and reel, with a fairly large braided silk line, as found line fishing is an abomination, and does not afford half the sport or fun.

As to the comforts of the hotel I cannot speak, as I did not live there, but the guests appeared fairly satisfied. The surf bathing is good, and any one fond of the labor of hauling in sharks can have as much of that kind of sport as they want.

To reach Cobb's Island take the boats from Baltimore or Washington to Old Chatham, then the steamer Northampton to Cherrystone, then by sailboat to destination.

COSMOPOLITAN.

WASHINGTON, D. C., July 31.

## Camp Fire Flickerings.

"That reminds me."

IN your paper of July 5, "Ouachita" tells of the attaché of the dramatic company catching the twenty trout through the medium of the large grasshopper. "That reminds me," said I, "of a similar incident which occurred in Spring River, Md., some time ago. We had met with very good luck, capturing a number of channel catfish, white bass and perch, when one of the 'natives' came along. He was quite talkative, and related his experience in fishing."

Among the many stories he told was one wherein he had caught what he termed the "bellfish."

He said he had been fishing in the headwaters of Spring River about two years ago. He had fished nearly every day, but without success, when at last (he had about concluded to give it up) he had a "powerful bite." He worked for nearly an hour and landed the "bellfish," and as he expressed it—"Stranger, you may not believe me, but as soon as that fish was out of water, the fish—an I never see the like—commenced to flop and jump out of the water to follow him, an' with the help of my oldest boy, we just took a pole an' an old net we had with us, an' caught near two bar'l of fish." We concluded that that was a large "fish story." He explained by saying that fish always selected one of their number as a leader, and followed it, just as cattle, horses and sheep will follow one of their number to which a bell is attached.

SHAWONTDARE.

KANSAS.

In next to last line of "Me-hit-able's" story in issue July 5, "boat" read "bed," as he wrote it.

# Natural History.

## HOW TO KILL THE ENGLISH SPARROW.

Editor Forest and Stream:

I agree with your correspondent, "Homo," in regard to the dangers attending the use of the gun or of poison for exterminating this nuisance. I have been much annoyed lately by sparrows that occupy a martin-house on my neighbor's premises. The martins left it in disgust a few years since, for all our birds keep aloof from the filthy house-sparrow. If the house had been my property I should have removed it long ago. The sparrows likewise had heaped their rubbish upon forsaken birds' nests, defacing the trees and making something like a nest for their own offspring. I encouraged the boys in the neighborhood to destroy all these lumps of rubbish, but this did not seem to diminish the sparrows or their demoniacal chirping.

Our Massachusetts Legislature had repealed the ridiculous law that protected these pests, and the inhabitants were now at liberty to use their common sense in the treatment of these birds. But while thousands were anxious to exterminate them (if possible from the face of the earth), all were averse to using poison or the gun. I would not like to use either, though in winter, when our summer granivorous birds are absent, poison might be used with safety.

Being confined to the house by illness during the month of May, and amusing myself by listening to the singing birds that were numerous around my house, I was greatly annoyed by the demoniacal chirping of the sparrows, which often for an hour would render it impossible to hear the sylvan concert. While watching a man outside who was using the hose to wash the windows of an adjoining house a happy thought, as it seemed to me, entered my mind. I thought how quickly every sparrow in the martin-house might be destroyed by directing a stream of water into their filthy apartments, after they had been led to rest and drooping with thirst. The same idea might be used to drive them from every place they had appropriated. But this method of destroying them could be used only in certain neighborhoods.

Now, Mr. Editor, I ask leave to suggest a method by which the sparrows, however numerous, might be exterminated from any town in less than a week. This would be done by the use of a steam fire-engine. Let every town that is in earnest about getting rid of an enemy as sure as a bird is a man to use it for this work. The drowning of the sparrows with cold water would be momentary, and there is indeed no cruelty at all in the act. The engine could be used most effectually in the winter, when a stream of water, by immediately freezing, would destroy the birds almost as quick as lightning. WILSON FLAGG.

NORTH CAMBRIDGE, July 13.

## THE ROBIN.

*Turdus Migratorius.*

SEE him throw out his chest and rear back! Oh, he is a proud fellow, quite in a house, with his more modest neighbors, but after all, his is a pardonable pride. Possessed of such a well-knit figure, fine head and erect carriage, who can blame him if he exhibits a trifling conceit. His is a familiar figure on our lawns, now hopping quickly along and now running swiftly, pausing after each dash, and rearing up to look around. See him as he makes another swift run of a few feet, then bends eagerly forward, appearing to listen intently. Suddenly he darts his bill down, and with the force of a cannon, we see him drag a long earthworm from out the grass roots. I have never been able to determine with any satisfaction to myself whether it is his sense of hearing or sight which guides him to his food; his attitude of intense attention for a moment before darting on his prey, would seem to indicate that the former was the case, but again, he may be only watching intently, as it is possible that the squirming of the worm as he pushes his way to the surface, may cause a tremor among the blades of grass, not visible to our coarser vision, but easily perceptible to our little lynx-eyed friend. At all events, there is a moment's pause each time before the final lunge, which almost invariably results in a capture. If the tender morsel happens to be an extra large one, it is amusing to see him "freshen his grip," as it were, and back off, until stretched to its utmost, until comes the worm, and its wriggling length appears for an instant only, as redreast unceremoniously gulps him down.

Our friend is fond of living near us, and builds almost anywhere, in maple, elm, spruce, on the lawn, in the orchard, or in fact, in the most convenient spot he may chance upon. The location, however, once selected for his nest, he will often occupy year after year. High or low seems to make little difference. As to materials for his nest, he is not over particular. Though formed chiefly of wisps of paper, stry, hair, and always a quantity of mud, seemingly intended to give it stability. The interior is carefully lined with soft warm fibers of bark, hair, and grass, and great attention is paid to this part of the work. His temper, I am sorry to say, is not altogether as lovely as his appearance. When a family jar occurs among the feathered inhabitants of his abode, although they may not be of his own kind, you will see him streak off for the scene of the rumpus, to mingle his angry notes in the general roar. He is a kind husband though, and ever on the alert to protect his family. His shrill cry of distress will summon all his companions within hearing, and their united efforts will often disconcert and drive away feline intruders, to say nothing of crows, blackbirds and other egg-sucking, nest-destroying vermin. He is happy, although they may not be of his own kind, and is supremely happy, and will join with the sparrows in raising such a din about the poor thing's ears as to put it ignominiously to flight. A good songster, he is at his best during the breeding season, and it is a surprise to many, who are familiar only with his ordinary monotonous cry of bob! bob! bob! to hear him launch into such an ecstasy of song, often insisting that he cannot be the performer. He is capable of a great feat in the musical line at the season, however. At the bath he is inclined to dominion over others who may be in possession on his arrival, and I have noticed with interest that the English sparrow moves off at once on his appearing, or is forced to leave often in spite of noisy expostulation. He will wash in company, provided he is not crowded, but if this happen he at once clears the board.

In the autumn his whole nature changes; congregating in large flocks, he becomes exceedingly shy and difficult to approach, and at this season is a favorite object of pursuit with the swarms of pot-hunters who infest our neighbor-

hood. A great deal has been said in regard to his destruction of fruit. True, he will eat the cherries, and by-the-by, he is a connoisseur as regards the cherry, and we boys always used to select those that bore his mark as being the most luscious. He affects the strawberry also to some extent, and occasionally varies his menu with a fine grape or two, but the damage he does is light, compared to that inflicted by others, the imported nuisance for instance. It may be that he causes wholesale destruction in some sections, as is written of him, but I cannot believe of it, and I am rather inclined to think that if pains were taken to carefully observe, the greater part of the sins of which the pretty fellow is accused, would be brought home to "some other man." In the mean time until the documents are produced, I shall stand for "Bob" against all comers. WILMOT.

["Wilmot" is the signature adopted by our contributor [who under the nom de plume "Dick" has so often had a place in our columns. For the many "good things" sent in the past, our readers will please transfer the credit to the new name.]

## THE BLACK RACER.

Editor Forest and Stream:

I'm surprised. Do you know where doubters and unbelievers go when they leave New York for good? Here I've had the greatest of it lately, twenty years, tore it off myself, have referred to it I don't know how many times, and one of you say that his existence is doubted, or rather that he did exist before I killed him, or that there ever was another like him. I am surprised. I only wish Woodman was alive to set forth his merits to you as he did to me, and then see if you had doubts. "Don't know Woodman?" Why, he's the one that did not give the first unearthly screech when the city of Springfield was born, but he did the crying that invariably follows birth, for two years beautifully. I wish you could have seen him march down Main street, swinging a ponderous bell as though the championship of America rested on his shoulders, and as he would bring up at the corner of Court square, with the dignity of a judge deposit the bell on his left arm, and, with feet well braced, open on the subject in hand. It was not necessary to repeat his message, for the whole city heard it. Later, however, his voice produced some fearful results. One Sabbath morning while engaged in his usual barber-shop occupation, and in the most difficult part of it, "two dogs" attempted to settle a little unpleasantness on the doorstep. Opening the door under the excitement of the interruption, he "histed the gate clear up" with a "get-a-e-o-u-t" exceeding even his usual powers. One dog disappeared over the fence and was not seen afterward; the other made a desperate leap for the street, but fell dead at the gate, undoubtedly struck while crossing the line of some note in that "music of the spheres." This conclusion was reached after full discussion over the remains.

But there was earnestness in his description of the black racer. There was, to him, terror in the name, and this is, perhaps, not to be wondered at, for he was not swift of foot, and the idea of being choked in the racer's coil was among the possibilities at least. "One of my neighbors," said he, "was riding to the lake, when the racer came out across his back as from a heavy whip, and hollered, 'Oh, he looked all round, but could see nothing and drove along. Soon he received another blow and again hollered, 'Oh, it was a black racer, hid in the hay, that had struck him.' Another case he related where the snake "clicked" his tail like a whip lash round the legs of some children, hurting them awfully, and that one big snake was chased by men on horses clear to the door of the House on the Boston road, where they beheld the track entirely, having been distanced out of sight by the snake.

But to return. It is hardly safe for parlor naturalists to ignore tradition. Few structures are without a base, and the wildest exaggerations in describing phenomena in organic life invariably have some parts on which to build. The Indian tradition of the nastodon which graced one of our earliest school-books, and to me, an unsolved mystery, until I laid before the skeleton entire stood before me, and I walked between the forelegs of one, my head not touching the breast bone. And in like manner, after the accumulated tradition of the black racer, it was hardly proper for Goodrich and other writers to ignore his existence, because there must have been something from which to build it. Now he stands out as one of the things that are, and although almost extinct in New England, no reasonable person can doubt his existence at the present time.

The common *Crotalus* of the United States is seldom even six feet in length, black above, while the whole belly is slaty blue. Constrictor is to me a mistaken title. I have seen them in all ways and places for nearly half a century, and I never kill one, but give chase, stepping on the tail to see them turn upon me, striking with open mouth, seizing my clothing and shaking it like a puppy. I have never been able to induce an attempt at the Constrictor qualities represented. I have seen them ascend a tree of thick branches with all the cleverness of a squirrel."

The black racer (*C. caryocarpus*) is slimmer built and from eight to twelve feet in length. Glossy black above, the belly a mottled brown. The throat and two-thirds of the neck circuit white as polished ivory, while large blotches of white extend four feet down the belly, disappearing in a broken line in the middle of the body, and on short acquaintance is the most saucy, impudent snake in existence and ready to follow anything that will run. One man said to me: "The snake moved out from an old fence directly in front of me, head two feet high, white throat and belly, thrusting out a long fiery tongue. Then, to get a better view probably, he came several feet nearer, and evidently with 'come now, start yourself' in his eye. Of course I showed coat-tails to the field, with a snake-skip close behind. He was rearing a fence, and a snake fight with a fence, life lasted, but the snake stopped just beyond reach of the club. After regaining the breath which was most gone, I demonstrated at the snake who retreated across the field and I after him. Making a stroke at him which he dodged, my club broke and fell from my hand. He instantly turned upon me, and without stopping to think I took to my heels across the field a third time, the snake close behind. Here I cried 'quit' and got over the fence and left him in possession of the field."

Another man said a racer chased him whose head was as high as his own, and that he barely escaped with his life. Another said his companion, while hunting, clive down the hillside with a racer at his heels, calling for help at every jump, having lost both bat and gun in his flight. And yet another, "I was sauntering along, staff in hand, when I heard a creature crawling over the rocks, and saw a snake with 'colors flying loose.' There's a snake after me," was

all she could utter. As she shot past me, I stepped in front of the snake, who instantly stopped. Stopping a little to get a horizontal stroke and cut his head off. I struck, but his head wasn't there. Quick as a flash he dodged my blow, then turned and disappeared in the brush and bushes."

I could repeat these stories indefinitely. They come from men of candor and veracity; are what they saw and what they did; so that, making all possible allowances for fricht and exaggeration, I feel that it is hardly necessary to exhibit any other substance than the evidence of the eyes, which, in all serpentine qualities, stands alone and at the head of his genus. Impudent, saucy, rolisome, but harmless, is my story of his life till a better one is told.

B. HOWSFORD.  
P. S.—I am happy to announce that after twenty years' research I received to-day another *Caryocarpus*, not as large as the first, but bearing all the characteristics before described.

SPRINGFIELD, MASS.

## Game Bag and Gun.

GAME RESORTS.—We are always glad to receive for publication such notes of desirable game resorts as may be of help to the readers of FOREST AND STREAM. Will not our correspondents favor us with such advice?

## SOME EXPERIMENTS IN VISION.

I HAVE pursued my experiments, as "I. H. T." suggests, with results as follows so far as my eyes are concerned:

If I bring the left edge of an object close at hand on a line with the right edge of an object at a distance, the right eye is closed at the first, and then the right eye, the first object does move over and obscures, though it does not hide, the distant object; the distant object is seen dimly, and apparently as if through the near object, while other objects at a distance that were hidden by the near object when the right eye was closed, become visible when the right eye is opened.

If the right edge of the near object is brought in line with the right edge of the distant object, the right eye shuts, when the right eye is opened the near object again apparently moves over to the left, and the distant object becomes visible; but by looking intently with both eyes open, the head being steady, the same appearance of seeing the distant object through the near one becomes evident, though not so clearly marked as in the first case.

That we see with both eyes, when both are opened, can be easily shown by trying to hide some distant object, as a flagpole by some near object as the vertical bar in a window sash.

With either eye shut the head can be moved so as to hide the distant object; with both eyes open the distant object will be seen in all positions of the head that keeps the orbits of the eyes on a horizontal line; looking intently it will appear as though there were two near objects, the distant object being seen all the time, and a position can be found when it will appear as though the distant object was seen between the two near objects.

The moon was used as a distant object, and a veranda post as the near object in verifying the above, so far as the near object's moving over to the left, and the moon and a flat ruler wide enough to cover her disk, when held at arm's length, for the last experiment. The ruler was used for this, as the veranda post hid the moon even with both eyes open, on account of its width. The ruler, held at arm's length, made the moon double, the two images occupying the positions shown when first one eye and then the other was closed; by closing first one eye and then the other, the ruler can be given such a position that the moon can be seen exactly midway between the two images, and the image in position for the right eye (for my eye) was found to be much the stronger.

I have used the microscope, telescope, transit, etc., and have never shut the unused eye, nor does it begin open either in the least. The most singular power, however, is that familiar to all who use the jeweler's eye-glass; by the will power alone it is possible to see with either the eye looking through the glass and be blind for the time being with the other, or to see with the eye not occupied by the glass and to be blind with the one so occupied. Time and time again have I used my eyes, seeing through the glass when at work that needed it and seeing absolutely nothing with the other, but when a tool was needed instantly changing to vision with this eye and looking for the tool, perhaps and more than probably not changing the position of the head while so doing, so as not to lose the position of the work through the glass when it became necessary to look at it again.

In shooting a rifle at target I always close one eye, although I can see the sights plainly with both eyes open. In snap rifle shooting I never stop to think whether I shut one eye or not, and in shooting with a shotgun I keep both eyes open—with me, being a right-eyed and right-handed individual, I have no trouble; but I can readily see how a right-handed, left-eyed man, or *vice versa*, would be troubled to shoot well until he had accustomed himself to the circumstances by practice.

I will not trespass on your patience longer, as I only intended to give the "Snapshot" by the results of my observations. I thank "I. H. T." for his suggestion, however, which has led me to confirm my idea by further observations. C. D.  
WYOMING, July 16.

A PERTINENT INQUIRY.—"The Rev. G. A. Cleveland, of Gloucester, Mass., in a letter to the *Cape Ann Advertiser*, asked me a question which I thought I ought to explain. He had been a good deal amused with one of their tricks. On my coming near the flock the male partridge would rush toward me with feathers stuck out like a frill, wings flapping, and making a terrible fuss in every possible way. After a time, though, I found that this was only a trick. While my attention was being drawn to the bluster before me, the female with smooth feathers and drooped head was hurrying off with the brood. I was so taken up with the male that I had been accomplished there were no longer any partridges in sight, male or female." A Hartford correspondent, "W. H. K.," who sends us the above clipping, suggests the pertinent inquiry, at what season of the year was Mr. Cleveland "bunting partridges before now?" Will that gentleman have the courtesy to tell us? And if, as we presume may sometimes have happened, the shooter succeeded in killing the bird, would he explain, as he did, his contribution to natural history, what became of the brood?

**OHIO GAME NOTES.**—Steubenville, O., July.—We have quite a number of gentlemen here who are alive to the enjoyment of sports in the forest and stream. It is true, game is not very plenty in this locality. Squirrels are being killed in fair numbers around the wheat fields, and I am happy to say that Bob Whites are whistling all around us again. I saw a brood of little fellows last week just large enough to fly, and had the exquisite pleasure of putting a load of No. 7 shot in a hawk which was doing his best to destroy them. With a little care we will have plenty of birds here again. Rabbits were never so plenty. The boys are training their dogs with the expectation of fine sport this fall. I have three good dogs, and about October we will make the fur fly.—A. E. M.

**IOWA PRAIRIE CHICKEN.**—Decorah, July 18.—I must send you a few lines again this time, in regard to the prospects of the coming shooting season. From all accounts I have no doubt to obtain, I think we are likely to have some good chicken shooting; we have had some very heavy rains, but fortunately the young birds were strong enough to stand them before they came, and if the birds are only left alone (which I fear is dubious) until the season opens, there will be some good sport in this vicinity. There seems to be a nice lot of quail, which I am surprised at, owing to our having had so severe a winter. Pheasants are almost as good as a bird of the past in this part of the world, why I cannot say.—J. L.

**NORTH CAROLINA GAME.**—Belvidere, N. C.—I have never seen old quail more abundant than at this time. Should the heavy rains not destroy the young, we will have excellent hunting next autumn. Our law protects them until Oct. 1. Deer are becoming scarce, but plentiful every year, and as we have protection for them from Jan. 1 to Aug. 1, they will probably get a rest.—A. F. R.

**TELEGRAPH STRIKERS.**—Our Philadelphia correspondent reports July 21: Two or three dead woodcock have lately been picked up under the telegraph wires near Norristown, one last evening by some children of the town. Examination proved them to be telegraph strikers, but the blows in every case were disastrous and ended in dissolution.

## Sea and River Fishing.

To insure prompt attention, communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

**ANGLING RESORTS.**—We shall be glad to have for publication notes of good fishing localities. Will not our correspondents favor us with notes of desirable points for angling excursions?

### CHANNEL BASS.

Editor Forest and Stream:

On several occasions I have referred to the royal sport in store for fishermen if they would visit Mayport, near the mouth of the St. John's River. In the past our fishermen have been in the habit of capturing these fish with a hand line, and I have repeatedly pointed out to several of my friends the sport to be secured in the capture of these noble fighters with rod and reel. About two weeks since Col. H. S. and H. made their first essay in rod and reel fishing for large bass. S. hooked a large one, and after playing him for some time he coaxed him to the side of the boat. The fish disliked the appearance of the excited face of S., gave a flirt with his tail, ran under the boat, and in an instant the rod was converted into match wood. H. (an eminent civil engineer from Gotham), who had earnestly discussed with me the antics and gambols of the "red-tail" salmon, and ridiculed bass fishing, hooked a big fellow. The bass started on a two-forty gait, and H. thumbed his reel until the cuticle disappeared; and as a *denier reser* he compressed the line against the rod with his finger; but the pressure lasted but for a moment, for blood followed the line. H. let him run, and as soon as the last coil left the reel, the line parted and the fish departed. Col. H. hooked one which the boatman carried off fifty pounds; and after a fight of one hour and a half the mood was cut in twain.

Col. H. made a second attempt, and he called on me this morning in raptures over his success. Owing to the breaking of his line and the hook tearing out he lost two large fish. He weighed his fish, and in order that I may not be accused of "drawing the long bow," I append a printed statement from to-day's *Evening Herald*, regarding my friend's second attempt at bass fishing:

"Our genial and popular fellow citizen, Col. J. E. Hart, is distinguishing himself as a disciple of old Izak Walton, and bids fair to make as complete a success of himself in the delightful sport of fishing as he has made of his big grain elevator at the foot of Liberty street. He came up from the bar this morning, where he has been spending the last few days, bringing with him a twenty-five-pound channel bass, the trophy of the rod and reel. Saturday he caught four of these beauties in about an hour's time, the largest weighing thirty-five and the other three twenty-five pounds each; and the rod and reel did it all."

The time has not arrived for the main run of these fish; but from the middle of August to the middle of September they will enter the river in quantity. In many years' fishing in the neighborhood of Mayport, the smallest one I captured weighed 19 lbs. On one occasion we had a hand line captured between daylight and 7:20 A. M. eleven that averaged 45 lbs. My memory may fail me with regard to the fighting and staying qualities of the striped bass, but in my opinion channel bass are their equals. It is to be regretted that none of your Northern fishermen who are devotees of the rod and reel, and who can enjoy the capture of fish worthy of their steel, do not avail this season in the early part of September. If about twenty or twenty-five lbs. are considered unworthy of their daily notice, in the way of variety they can look on to from five to eight feet of grased lightning—a tarpon.

The voyage from New York to Savannah in August and September is a pleasant one; time about fifty-five hours. From Savannah to Jacksonville by train six hours, and from Jacksonville to Mayport by steamer less than three hours. At Mayport, where I have caught a goodly lot, where board can be obtained at \$10 per week. The temperature is no higher than in the North, the nights are cool, insect pests are not so bad as on the Jersey coast, the healthfulness of the

locality is beyond question, and the sea bathing is A1. Fishing is done from a boat; and to those who can enjoy right royal sport we will say try channel bass fishing. Even friend "Didymus" might find something to interest him.

JACKSONVILLE, FLA., July 10, 1883.

AL. FRESCO.

### OSSEEP PARK.

BY O. W. R.

#### I.—THE HEART OF THE OSSEEPS.

"The cedar and the mountain pine,  
The willow on the fountain's brim,  
The tulip and the opulante,  
In reverence bend to Him.  
The song birds pour the sweetest lays,  
From tower and tree and middle air;  
The rushing river murmurs praise—  
All Nature worships there!"

ON the northern shore of Lake Winnepesaukee rise and extend from east to west the range of mountains called the Osseeps. The highest peak, Mount Shaw, (named in honor of the owner of Ossipee Park) is 3,000 feet above the level of the sea, and from the observatory on its top (forty-five feet higher than the mountain's crest) an exceptionally fine view may be had in every direction, and the finest, anywhere obtainable, of the White and Franconia ranges.

The park is, *par excellence*, a natural one, and the desire and purpose of the owner is to keep it so; to preserve and foster its pristine beauty, and the hand of art (not always a soft or deft one, as associated with natural scenery) is only used to make accessible the rare loveliness of Nature's handiwork so lavishly spread throughout this lordly domain of 400 acres. The Hall, situated on a plateau on the mountain side, surrounded by a lawn of about seven acres, is 800 feet above the level of the lake, and for elegance of design and finish is a model.

It is thoroughly built and not thrown together in a haphazard way, but is comfortable for a long sojourn in the fall, when the mountains and meadows are ablaze with glory. It is well supplied with fire-places, and in their construction the useful and beautiful have joined hands, and the result is pleasant to more than one sense. I am sure that every sportsman will recall to mind the comfort of stretching before a blazing fire on the hearth after a hard day's tramp over the hills and by browsing stream, with or without "accessories," a wood-fire is a rare good thing of a rainy day or a chilly glooming. Every modern convenience, and, thank God! several good, old-fashioned ones, are to be found within the Hall, so that pleasure and comfort are not wholly dependent upon the state of the weather. Aside from the extensive and incomparable views to be had from the Hall and from the observatory on Crow's Nest—a height near the lawn—there is a marvel of beauty in the shape of a brook running through the clove, the falls and cascades and rapids of which are notable for peerless and peaceful beauty and picturesqueness. The Park is reached via Center Harbor, thence by trolley-coach to Moultonborough Corner, where the Park carriage will meet expected guests. For the present season only a dozen guests can be comfortably accommodated at a time, as the Hall was erected for its owner's summer occupancy and not for a hotel. The whole property is owned by Mr. B. F. Shaw, of the Shaw Stocking Company of Lowell, and is fitted and managed very like an Englishman's lodge in the Scottish Highlands, which it resembles more than any other American ever brought to my notice. It is a place designed and eminently fitted for the cultured taste, for the refined and for those who love the beauty and peace of nature rather than the fashion and worry of "society," as found of most country resorts. It has been called "the most beautiful place in New England," and I think it cannot be denied. For good and sufficient reasons shooting and fishing, within the domain, are strictly forbidden, but even the most ardent sportsman must forget, or hold in abeyance, his favorite pastime within the confines of this beautiful and peaceful spot—lung, as it were, between earth and heaven and deluged with "loveliness devoid of art."

Those who love Nature, rest, freedom from turmoil and a free enjoyment of all creature comforts, will find here the name of reasonable desire, and a revelation of wonderful beauty and magnificence.

I purpose to note some rambles and views taken hereabouts, yet though written about the place can never be fully described. Of it may it be truly writ—

"And in some calm, sequestered spot,  
While listening to thy choral strain,  
Past griefs shall be awhile forgot  
And pleasures bloom again."

THE HALL, July 17, 1883.

### THE COMING TOURNAMENT.

IN accordance with a resolution passed at the last meeting of the National Rod and Reel Association, President Endicott has appointed the following gentlemen as a committee of arrangements for the tournament to take place next October:

Chairman, Mr. James Benckard, President South Side Club, Long Island.  
Francis Endicott, President National Rod and Reel Association, *ex officio*.  
Eugene G. Blackford, Commissioner of Fisheries, New York.  
Samuel M. Blatchford, Squibnocket Club.  
Dr. E. Bradley, President Bloomingdale Park Association, Pennsylvania.  
Martin B. Brown, Waywavyanda Club.  
D. W. Cross, Audubon Club, Ohio.  
Chas. B. Everts, American Fishcultural Association.  
Hon. James Geddes, Onondaga Club, Syracuse.  
Wm. C. Harris, New York.  
Dr. James A. Henshall, Cynthiaia, Ky.  
Dr. C. J. Kewworth, Jacksonville, Fla.  
Robert B. Lawrence, Union Club, New York.  
William Blair Lord, Washington, D. C.  
Hon. Henry P. McGown, Cattyhunk Club, Thatcher Magoun, Jr., Boston.  
Fred Mather, Adirondack Club.  
Prof. A. M. Mayer, Stevens Institute, Hoboken.  
Barnet Phillips, American Fishcultural Association.  
Hon. R. B. Roosevelt, President Game and Fish Protective Society, New York.  
James L. Vallott, President Pasque Island Club.  
C. Van Brunt, Willemence Club.  
R. Van Vleet, Ichthyophagous Club.

Edward Weston, President Greenwood Lake Association.  
Locke W. Winchester, President Restigouche Salmon Club.

Louis B. Wright, Westminster Kennel Club.  
Rev. Henry L. Ziegenfuss, Poughkeepsie, N. Y.  
The committee will be divided into sub-committees on grounds, rules for the different contests, etc.

### BLACK BASS IN TROUT WATERS.

BY DR. J. A. HENSHALL.

IN the discussion following the reading of my paper "On the Distribution of the Black Bass" at the last meeting of the American Fishcultural Association, and published in FOREST AND STREAM of July 12, I am placed in a false position in regard to the introduction of black bass into trout waters, which I hasten to correct. I am utterly opposed to the introduction of black bass into waters in which there is the remotest chance for the brook trout or rainbow trout to thrive. I yield to no one in love and admiration for the brook trout. I was perfectly familiar with him before I ever saw a black bass, but I am not so blinded by prejudice but that I can share that love with the black bass, which for several reasons is destined to become the favorite game fish of America. "My offending had this extent, no more."

Let us look this thing squarely in the face. I do not wish to disturb any one's preference, but I do want to disabuse the minds of anglers of all prejudice in the matter. The brook trout must go. It has already gone from many streams, and is fast disappearing from others. It is sad to contemplate the extinction of the "anglers' pride" in public waters, but the stern fact remains that in this utilitarian age its days are numbered and its fate irreversibly sealed. As the red man disappears before the tread of the white man, the "living arrow" of the mountain streams goes with him.

The trout is essentially a creature of the pine forests. Its natural home is in waters shaded by pine, balsam, spruce and hemlock, where the cold mountain brooks retain their low temperature, and the air is redolent with balsamic fragrance; where the natural food of the trout is produced in the greatest abundance, and where its breeding grounds are undisturbed. But the iron has entered its soul. As the buffalo disappears before the iron horse, the brook trout vanishes before the axe of the lumberman. As the giants of the forest are laid low, and the rank and file decimated, and the wooden walls of the streams battered down, the hot, fiery sun leaps through the breaches, disclosing the most secret recesses of forest and stream to the bright glare of mid-day. The moisture of the earth is dissipated, the mosses and ferns become shriveled and dry, the wintergreen and partridge berry, the ground pine and trailing arbutus struggle feebly for existence; the waters decrease in size and increase in temperature; the conditions of the food supply and of the breeding grounds of the brook trout are changed; it deteriorates in size and numbers and vitality, until finally, in accordance with the immutable laws of nature and the great principle of "survival of the fittest" (and "the survival of the fittest" is the point of view, but the fittest to survive the changes and mutations consequent on the march of civilization), it disappears altogether.

Much has been said about the "trout hog" in connection with the decrease of the trout. But while he deserves all the odium and contempt heaped upon him by the honest angler, the result would be the same were the trout allowed undisturbed and peaceable possession of the streams, so far as the fish-hook is concerned, while the axe of the lumberman continues to ring its death knell.

Let us, then, cherish and foster and protect the crimson-spotted favorite of our youthful days as long as possible in public waters, and introduce the rainbow trout, or the Dolly Varden, or some of the Pacific black-spotted trout when he has disappeared; and when all these succumb, then, and not till then, introduce the black bass. But let us give these cousins of the brook trout a fair trial first, and without prejudice. There are plenty of lakes, ponds and large streams in the Eastern States into which the bass can be introduced without interfering with trout waters, and this is what I meant by saying, "If, then, there are waters in which the brook trout or rainbow trout will not thrive, do not hesitate to aid in the further distribution of the black bass by introducing that desirable species."

For many years the brook trout will be artificially cultivated, and the supply thus kept up in preserved waters by wealthy angling clubs; but by the alterations of the natural conditions of their existence they will gradually decrease in size and quality, until finally they either cease to be or degenerate to such a degree as to forfeit even this praiseworthy protection.

I must dissent from Mr. Endicott's statement that the black bass is the bluish of fresh waters. The black bass is voracious—so are all game fishes—but not more so than the brook trout. The character of a fish's teeth determines the nature of its food and the manner of its feeding. The bluish has the most formidable array of teeth of any fish of its size—compressed, lancet-shaped, covered with enamel, and exceedingly strong and sharp, in fact, miniature shark teeth—while the black bass has soft, small, brush-like teeth, incapable of wounding, and intended only for holding its prey, which is swallowed whole. The brook trout has longer, stronger and sharper teeth than the bass, and a large, long mouth, capable of swallowing a bigger fish than a black bass of equal weight. The mouth of the bass is very wide, for the purpose of taking in crawfish with their long and aggressive claws, and not, as supposed by some, for the swallowing of large fishes. The black bass gets the best of other game fishes, not by devouring the fishes themselves, but by devouring their food. For this reason, more than any other, they should not be introduced into the same waters with brook trout. The pike or pickerel is the bluish of fresh waters, and in dental capacity and destructive possibilities is not far behind him.

I regret the placing of black bass in Raquette Lake fully as much as Mr. Endicott, and although the trout were said to have been introduced there at the time it does not excuse their act. Such waters should be kept for the salmon tribe, until it is fully demonstrated that they will no longer live in them. The vandal who planted black bass in the Raquette Lake should have been dumped in with them.

I thank Mr. Endicott very heartily for the statement that he was annoyed by the continued rise and capture of black bass when fishing for trout in that lake. Perhaps this statement, when made, was true, but the black bass, the bluish of fresh waters, will tend to convince some of the doubting ones that the black bass will rise to the fly.

CYNTHIANA, KY., July, 1883.

## THE ICHTHYOPHAGOUS DINNER.

OUR Texas correspondent, "N. A. T.," who sat through all the courses of the last Ichthyophagous Club next to Mr. F. Endicott, president of the National Rod and Reel Association, and still lives, we are happy to say, writes an account of the feast to the *Galveston News*. We are sorry to note that at the close of "N. A. T.'s" letter he casts a doubt on the record of the members of this club, as given by the *New York Sun*. The *Sun* is nothing if not correct, and its snake stories are received by the naturalists of all countries as valuable additions to our knowledge of reptiles, while its fishing trouts, backed, as they are, by the name of the learned Amos Cummings, will go down to a posterity which will marvel at the former wealth of the fisheries of America. With this bit of preamble we give the following extracts from the letter of Mr. Taylor:

"I managed to get down a little of all on the menu, but found the horse-shoe crab wretchedly poor eating. It took at least a half-pint of champagne to wash down a piece no bigger than the end of one's finger. As someone remarked, it tasted like the pith of dried elderberry brushes. I have no idea that the ichthyophagous will ever succeed in introducing the horse-shoe crab as a favorite article of food. I have the same opinion of the fresh-water mussel, which tastes just like green moss. The alligator steak was good; at least it could be worried down without an extra supply of wine. The fillets of sea cow were splendid, rich, tender, and carrying a mild flavor of banana. The animal is the manatee of the peninsula of Florida, and had never been tried as food before, so far as anyone knew. It is a fine success, and it is to be hoped that somebody will soon get a manatee ranch in the swamps of that State."

"The following are the names of the members and guests, with the 'fish record' of each as given by the *Sun*, for no man could be admitted without a 'fish record':"

NAME.	CATCH.
John Ford	Salmon in Loch Saor.
Landing tender.	Shad in the Connecticut.
Otto Witte	Crabs in the West.
EX-SURGENT General Ham-	
mond.	Buttricks in the District of Columbia.
R. E. Roosevelt	Goatskins in New York.
Prof. Jewell, Chicago	Snuffish in Culmer Lake.
Howard Carroll	Sardines in Long Island.
S. L. Woodford	Sturgeons in Washington.
Gordon L. Ford	Eels with Judge Lot.
Samuel P. Handy	Shad in the Connecticut.
Wm. Goodenough	Irish pike in Long Beach.
A. D. Williams	Trout in Headley's Lake, Saratoga, \$1 a pound.
Chas. E. Leonard	Perch in Cayuga River.
Prof. Mather	Nothing everywhere.
Eugene Shirkford	Shad in the Connecticut.
Chas. R. Miller	A sturgeon in New York.
Tom Barry	Husselt in the Cove of Cork.
Wm. Front, of Brooklyn	Herring in the Gut of Canso.
John H. Mortimer	Young oysters on a grizzly king.
Prof. J. J. Rice	Success in the Skagerrak.
Wm. Wernham	Every time.
Gilman, of Piquet	Suckers in Kinderhook.
Cornelius Van Brunt	Shad in the Connecticut.
B. F. Finstein	Pickel in Loch Ness.
John Thadon	Pickel in the Neckar.
Julius Simon	Sturgeon in the Neckar.
F. D. Curtis	Sturgeon in the Neckar.
J. A. Fendler	Plying fish in Cyprus.
Harriet Phillips	Shad roes in eating houses.
Wm. Taylor	Buffalo in the Rio Grande.
Francis Endicott	On the dinner.
Win. Drysdale	Is waiting to catch something.

"Now, if this fish record, as given to other gentlemen, is no more correct than that given to me, then I must say that the whole thing is a romance. I never caught a 'buffalo fish' in the Rio Grande, nor did I ever catch one of that sort of fish anywhere except in the fish markets at so much a pound."

Our correspondent is the first one that we have heard dispute the angling record of the members as given by the *Sun*. He denies the buffalo fish, and this, we fear, will tend to throw a doubt on what has been considered a truthful record. The club will be pained to learn that some papers have intimated that their dinner was prepared more in spirit of fun than as learned scientific sciences, as all who have attended them know them to be.

## A DAY WITH THE TROUT.

IT DID not arrive in season for the best fishing. It is only in the large spring-holes that one now meets with success. One such place I got of and have recently enjoyed to the utmost. But though I have often tried it, this is the first success. It must be struck at just the right time, and the time varies with the season. As the water of the stream grows too warm they school here, and very soon thereafter the otter and mink assemble to the feast, and it takes them but a moment to eat the water.

Monday morning, the 9th inst., found me, with my guide, picking our way over heath and bog, through windfalls, brush and over boulders, under a burning sun, each sacking a heavy load of grub and camp duffle. About twelve o'clock we reached the stream, and soon had the birch in the water. At one o'clock we arrived at the pool, laid the canoe alongside the low bank and set it in place with the paddles. My rod was already together, and I was with much trepidation that I unhooked from the reel-bar the stretcher, a golden pheasant, and let it fall, with the dropper, a Jennie Lind, lightly into the pool. In a flash a two-pounder struck, and as I sent home the barb, another, his fellow, was hooked and both landed. It was well I had previously soaked my leader, or one, or both, were lost.

It would fill a page to your paper to tell of the rise, strike and landing of all, but I will require the pen of a Davison or a Trim to do them justice. Every cast landed one or more, and of the 137, the limit of my catch, thirty pair were landed. I quit at four o'clock P. M., having fished just three hours. I had improvised a fish car from a packing case. That was full to repletion; still the trout seemed to suffer no diminution in numbers, and if possible the sport would have been the better as I was with much trepidation, and more than I would have done were it not that they would soon fall prey to their furred enemies. Bobby, my guide, could not care for them as they were reeled in. The most he could do was to pass them from my hand to the car. I never saw trout take flies so deep in the maw, and as a consequence, being without finger-stalls, fingers and thumbs were badly lacerated.

One beautiful picture presented itself and should be reproduced on canvas, only it would appear too extravagant for belief. I had hooked a large fish on the stretcher, and while reeling it in with the dropper a foot or more above the water, when four trout, apparently of a size and of about three-fourths pound weight, leaped simultaneously straight up all in a bunch and nearly their length out of the water to reach the fly. It was simply beautiful.

It was a tedious job towing the deeply-laden and square-ended car, and we had barely time to cut wood and put camp to rights for the night, kill and dress the fish, before it was dark. As I lay on the fragrant boughs drawing sleep from my pipe, the problem of how to utilize my beautiful fish presented itself, and before I slept it was solved. I laid them on a large pine tree that lay prone beside the camp, to drain and cool off. At one o'clock I awoke, arose and turned them over, finding them doing well in the cool night air. I slept no more, not even lying down again, so preoccupied was my mind with its pleasure. Long before dawn I was up, and the largest fish was packed with cool grass in a hamper, with the remainder strung on two forked branches. All this was done in the morning by the bright light of the camp-fire.

Bobby enjoyed the sleep of youth and innocence, so I got breakfast ready which was eaten in the first flush of dawn. We shouldered the fish, leaving all else for another party to fetch out. It was a heavy load to suck out and we had many miles to go before 9 o'clock, in order to hit the Boston express. We were in time to flag the train. All aboard then, for a sixteen miles ride to a station where a box and ice were obtained, and time enough to pack the fifty fish and start them on the way to dear friends in Boston, whom I trust enjoyed as much pleasure in receiving them as I did in—I was about to add taking, but as that could be the possibility will say so. The remainder were eaten at the home camp and given to settlers on the line.

CAMP LOT WARFIELD.  
CAMP STEWART, York county, New Brunswick, July 19.

## NEW HAMPSHIRE TROUT STREAMS.

I HAVE just returned from a two weeks' outing at and in the vicinity of Berlin Falls, N. H. I have had my first class sport, having caught over 500 trout. This place is ninety-nine miles from Portland, and is reached via the Grand Trunk R. R. Fare from Boston for round trip via Portland steamer is \$7.50. The Cascade House, Mr. H. F. Marston, proprietor, is a well-kept hotel, and the charges are \$1 per day. There are many good trout brooks within easy distance. The best are Blackstrap, Chickawallup, Silver Stream, Chas. H. Marston, and the latter two are excellent pickered fishing in the Androskoggin River, which is but a rod or two from the hotel.

This river was formerly filled with trout, but the chemicals from a wood-pulp mill situated on the river at this place, have killed them nearly all. About half a mile below the hotel on the river, are the famous Berlin Falls. The scenery in this vicinity is very fine. Mr. Washington and the Sumner House, also Mr. Adams, can be seen from the piazza of the hotel. A friend and myself caught 174 lbs. of trout in one day's fishing from Chickawallup Brook, and on another day 25 lbs. from Blackstrap. My friend also took over 200 trout in one day from Horn Brook. The trout run good size, many weighing from 6 to 9 ounces, and some more.

On my return home I brought twenty-two trout weighing about 8 lbs. From what I saw while there, I should think the outlook for fall hunting was good. Partridges and rabbits are abundant. I saw deer tracks several times along Chickawallup Brook. An old hunter named Blodgett has trapped and killed four bears this season, and during my stay he caught a fifth, which escaped by gnawing off its paw and leaving it in the trap. We also saw three foxes.

E. M. W.

SPRINGFIELD, MASS., July 23.

COLUMBIA RIVER SALMON FISHERIES.—The salmon fishing season on the Lower Columbia River is at its height. The run, which was very light early in the season, is now all that could be desired, so far as numbers are concerned, but the fish are somewhat smaller than the average of former years. The falling off in size is so considerable that many canners have been compelled to pay for the fish established last May, and the men, realizing the equities of the case, have accepted a slight reduction in many instances. Canners have no trouble in getting all the salmon they can use, and we have it from reliable sources that the pack for the season will be equal, or perhaps greater than for any former year. Several circumstances have conspired, however, to reduce the profits of the business. Labor in our department is unusually expensive, owing to the demand for workmen at the various railroad camps, the cost of the fish is from 15 to 20 per cent. greater than in any former year, and the price of the canned product is considerably less than the figures which have heretofore prevailed. The top figure in the market now is \$1.25 per dozen, or \$5 per case, while \$1.22 to \$1.23 has been accepted in several instances where parties were compelled to sell. Without much reason to hope for an advance, most of the packers are holding off, and it is estimated that not more than one-sixth of the season's pack has been sold up to this date. But one ship load has been dispatched to a foreign port, but there has been a steady series of shipments to San Francisco, where a considerable part of the pack is now warehoused ready for shipment to Liverpool, for the few buyers who have sufficient capital to take advantage of the market will make money, most of them will come out even on the season's work, and a few who are compelled to operate in a hand-to-mouth way, it is thought, will fall a little behind. If the effect of the year's misfortunes shall be to stop the building of canneries it will be well. The business is already overdone on the Columbia River.—Portland Oregonian, July 10.

THE FINE FISH.—Fall River, Mass., July 19.—A fish of which the sketch enclosed is a representation, was caught yesterday at Seacoast Point. Its color is a bright golden yellow, not unlike the yellow mackerel we sent you about four years since. No fisherman or any other man can give us any information as to the name or family this species belong to. In some respects it resembles the sea surgeon family. If you can help us out of this safely it will oblige your Fall River readers of the *FOREST AND STREAM*. F. A. [The fish is not very rare upon our coasts at this season. Your sketch was a very good one, and enabled us to recognize at a glance that the fish was the "orange file fish" (*Monacanthus tomentosus* DeKay). It is of the family Balistidae, a peculiarity of which is the trigger-like dorsal spine, which can be set as though incapable of being lowered and yet may be depressed at the will of the fish, the same as the pectoral spines of the catfish.]

GOOSE FISHING.—The editor of one of our Arkansas exchanges, in an issue just at hand, craves "the indulgence of readers this week. The type is not all as it should be. The *Coupositus natus* goes on their annual fish-catch." We should think so.

TWO FISHING TRIPS.—Nashua, N. H., July 9.—Reading in your issue of July 7 an article on fishing in Canada, it reminds me of my own trip. Last month (June) I went to my home, about 25 miles, and the landlord, Mr. Smith, and myself started at about 10 o'clock A. M., and an hour's drive brought us to a friend's farm, where a few nice trout brook. We asked permission to fish in the brook, which was given with the understanding that we were not to tell where we fished, and we caught eighty trout in about four hours' fishing, some of them half-pounders. I took my catch to Nashua to let them see, not hear, what I had done. Next morning I started on my Canada trip. A number of friends were going to Lenoxville, Canada, on a fishing excursion, one of them a hotel proprietor of fame, one a merchant, and the other a conductor on B. L. & H. R. R. Saturday 8-23 P. M. finds them all nicely tucked into a car, rods and basket of flies, a tin full of angleworms, so if they can't fish with the fly they can with the worm. They start off well for a three-days' trip, and the next day is a nice day to fish here at home, so we suppose, of course, it must be with them, but alas! the second day in the morning we look out, and lo! who do we see but our fishermen friends returning with not a single fish. Some one said: "Well! I guess didn't do the best, and only went twenty-five miles, and you went four hundred and fifty miles and not a fish." "Well," says Mr. J. G., the landlord, and "Well," says Mr. D. C., the merchant, "the water there was so high that we tried but could not get any where but the brook, so we did not get any fish, but we all tired out riding on the night express on the B. C. & M. R., and we have had enough of Canada fishing."—JESS.

THE ENGLISH ANGLING TOURNAMENT.—The prizes won in the Tournament at Hendon were presented to the winners by Mrs. R. R. Marston, at Foresters' Hall, on June 29. After the distribution Mr. Murphy presented a hearty vote of thanks to Mrs. Marston for her kindness in presenting the prizes, which was greatly appreciated, and by Mr. Marston, who had introduced these interesting tournaments into this country. Mr. Marston replied, and then proposed a vote of thanks to Mr. Bates, who really had almost the sole management of the Tournament arrangements, and had succeeded most admirably. Mr. Bates, in replying, so ably described the objects of the Anglers' Benevolent Society that he at once secured a handsome donation to the funds from Mr. Heathcote, Mr. W. Evans, and Mr. Bates. Mr. Marston seconded, a hearty vote of thanks to Mr. Wood for the interest he had taken in the Tournament—we should be glad to see him every year, even if he always carried off the best prizes, as he was doing to-night. (Hear, hear.) Mr. Wood briefly replied, expressing himself much gratified with the kind reception English anglers had given him—in fact, he felt "quite at home" over here, and he was delighted if he had been in any way able to aid so excellent a society as the Anglers' Benevolent. They had nothing of the kind in America. He would not detain them longer, as he felt much more in his element when playing a big black bass than addressing a meeting. (Laughter.)—*Fishing Gazette*.

A FISHWAY FOR THE SUSQUEHANNA.—Harrisburg, Pa.—In your issue of July 19 you notice that Professor Baird has approved and adopted the "McDonald fishway" for the Great Falls of the Potomac, and I presume this fishway will be put in at the expense of the general Government. If so, there are a million of people here in Pennsylvania who would pray and preach to have one erected at the Columbia Dam (I feel like putting an "n" to that word) on the Susquehanna. Our Fish(y) Commissioners have tried several times to do something beyond their ken, and have wasted several appropriations attempting to put a fishway in the dam, to have so far succeeded as to allow our fish to go down into Maryland, but not one to come back. The Susquehanna and its tributaries were good shad streams before the dams were built. Now, none get above the dam at Columbia except at intervals, such as a break in the dam or unusual high water. A good practical fishway at Columbia would fill the upper streams with undromous fish and bring joy and happiness to the angler's heart, and save millions of dollars to our people. With a view to having the question agitated, I ask you to insert the foregoing.—KEOKU.

TOWNSEND'S INLET FISHING.—It is scarcely worth while just now to point out any particular ground as the best for fishing. All along the New Jersey coast, from Barnegat to Cape May, reports come that fine catches of all the varieties are being made. Weakfish are so plentiful at some points, the baymen catch dozens of them at any price at the summer hotels, which have always been their markets. Sheepshead, however, never go a begging no matter how numerous they are, and at both Barnegat City and Beach Haven, the entire catch of the season is contracted for by hotels at a fixed price before the fish begin to arrive. Barnegat is always the choice when bluefish squidding is desired, and I believe the waters of this inlet are conceded to be the best for bluefish at sport along the Jersey coast; although the writer has found Little Egg Harbor inlet to be provided with bluefish enough to satisfy a very greedy fisherman. It has long been my desire instead of squidding for bluefish to be able to fish for them with a bass rod and light tackle. Has it been done, and can it be done, if so, cannot some one rise and explain?—HOMO.

PHILADELPHIA NOTES, July 21.—The Schuylkill River has been so high and turbid that bass fishing has not been all good during the week. I speak of the water as I noticed it to-day going to Norristown, Pa., seventeen miles from the city. It may be clearer further up stream, and no doubt the streams flowing into the Schuylkill are in better angling condition. Inquiries made coincided with the opinions formed on my way up. I noticed, while passing on the river, a small patch of water in mid-stream, near the Shawmont, evidently that of a fishing party which had settled down for a week's vacation; camp utensils hung on the trees, and the reflection of the sun on their bright surfaces and other indications, plainly visible from your correspondent's point of observation, told of the order and cleanliness of the temporary home of the angler. Without knowing whose camp it was, I will venture to guess it was that of the Schuylkill River, and I ask that a short account be given for *FOREST AND STREAM* of the catch made during their stay on the island.—HOMO.

NEW BRUNSWICK.—St. John.—In Telegraph Lake, near the head of Milkish, and in portions of the parishes of Westfield and Kingston, excellent fishing is afforded by many of the lakes and streams, and the locality is easily accessible by way of the steamer Enterprise.

**THE LARGEST BLACK BASS.**—After we went to press last week a monster black bass of the small-mouth species was brought to New York and shown at Mr. Blackford's, in Fulton Market. We believe it to be the largest fish of this species on record, and therefore its owner can claim to be a "high look" on this fish. Strangely to say it was not caught in any of the lakes of Western New York, nor in any waters which are the natural habitat of the fish, but in Lake Ronkonkomo on Long Island, where he was introduced only a few years ago. Its captor was Mr. Herbert Seymour, of Brooklyn, and as the fish weighed seven pounds, plump, on Mr. Blackford's scales twenty-four hours after it was caught; we do not doubt its claim to be an eight-pounder. Blackford diagnosed the fish, and pronounced it a small-mouth. Lake Ronkonkomo was stocked some four or five years ago with both the large and small-mouth black bass, but no authentic records of captures have been made.

**THE CANADIAN SALMON RUN.**—New York, July 18.—Contrary to general expectation, the present season has furnished an extra run of salmon in Provincial waters, and of very fine quality. This coming after some three years of unusual deficiency, may be a study for those who give attention to the habits of these migratory beauties. Leaving home with a party made up of four for a few days sport, we remained eight days and returned with four fish. The total catch was 197 fish, weighing 4,391 pounds, averaging over twenty-two pounds. The uniformity of size, weight and condition was remarkable. The score of the rods in numerical order stood: 77, 56, 39, 25—197. Heaviest fish, thirty-three pounds.—AN OLD HAND.

## Fishculture.

### THE NEW YORK FISH COMMISSION.

THE Rochester Post-Express, of July 18, gives the results of the shipments of fry from the State Hatchery at Munford in detail, as taken from the order books of Mr. Monroe A. Green. From this we learn that there were shipped 1,423,000 lake trout, 614,000 brook trout, 1,496 California mountain trout, 151,000 rainbow trout, and 30,000 hybrids, which were three-fourths brook and one-fourth lake trout.

But paper further than the prospects now are very encouraging for the erection of new hatching houses and buildings at the State hatcheries, Munford, and that the present buildings, which are a disgrace to the great State of New York, are to be removed or destroyed entirely. The grounds are to be enlarged, graded and otherwise improved. The increasing business of the hatcheries demand these improvements, and at once. Seven or eight years ago the hatcheries were established with a small stock of fish. Through the energies of those in charge it has successfully grown to its present mammoth proportions and stands at the head of the fisheries and hatcheries of the world. With the improvements completed the supply to the waters of the State of fish will be increased in a year a hundredfold. State Commissioner E. M. Smith is determined that these matters shall receive immediate attention.

There are a number of enemies of fish which destroy thousands annually along Spring Creek and in the ponds of the hatcheries, viz.: snakes, blue herons and kingfishers. Monroe A. Green wages a relentless war upon them, but they will multiply and increase in spite of his efforts. His experience in throwing a line or fly and catching snakes was illustrated yesterday in the city. Sitting in a boat with a light rod, fine line, with a tiny hook without a barb, he would make a cast, with a strong wind blowing, dropping the hook just over the head of a snake, just showing out of the water, fifty feet feet away, and in the twinkling of an eye the reptile would be on his way to the boat with the hook in the back of his head. The fly was thrown with as much precision as the majority of men would send a rifle ball.

### AMERICAN FISHCULTURAL ASSOCIATION.

[PROCEEDINGS CONTINUED.]

#### Second Day.

#### HISTORY OF THE EXPERIMENTS LEADING TO THE DEVELOPMENT OF THE AUTOMATIC FISH HATCHING JAR.

BY M. McDONALD.

THE work of practical pisciculture was, until a comparatively recent period, confined for the most part to the hatching of different species of the Salmonidae. The incubation of the eggs was at first effected in troughs having the bottom covered with a layer of gravel, upon which the eggs were placed, and over which a current of fresh water was allowed to flow.

In succession followed the "grill system" of M. Coste and the different devices of movable trays, now in common use for hatching this class of eggs. In all these various methods the separation of the dead eggs from the live ones is effected by means of hand-picking. The necessity for the separation, although not as urgent in the case of the eggs of the Salmonidae in that the young develop in warmer waters and in much shorter periods of time, still entails a vast amount of labor in connection with the hatching operations.

Although the ingenuity of our fishculturists has greatly improved the forms of hatching apparatus for these eggs, yet up to a comparatively recent period no effective means of separation other than the above indicated has been found practicable. The U. S. Fish Commission, in the development of its work, had presented to it the necessity of dealing with the eggs of the whitefish and the shad, upon a scale unprecedented in the history of fishculture. Millions of eggs were to be hatched where fishculturists formerly handled only thousands, and the old methods of hand-picking were soon found to be inadequate.

In all of the forms of apparatus for bulk hatching heretofore devised, no adequate means is employed for the separation of the dead eggs from the living, all as they come from the fish, the unimpregnated as well as the impregnated, are placed in the apparatus and remain together.

In the case of the whitefish, and more especially in the case of the shad eggs, which run through their period of incubation in a much shorter time, fungus rapidly develops among the entire loss of the eggs undergoing incubation. The attention of fishculturists was early directed to the serious losses thus arising, and various experiments have been made with a view of effecting the separation of the dead from the living eggs.

In 1878 Mr. F. N. Clark, the superintendent of the United States Hatchery, at Northville, Mich., attempted to effect the separation by introducing a gate into one side of the Bell and Mather cone, through which the shells and fish and dead eggs were to go out. This device, however, failed, and so far as it served for the collection of the young fish, was quite successful; but it was not found capable of doing the work for which it was first planned by Mr. Clark, and was abandoned.

Similar experiments, looking to the same result, were made by him with the Chase jar—the form of apparatus employed for the whitefish work at the Northville station. The result of these experiments, however, led Mr. Clark to the conclusion that an automatic or self-picking arrangement for effecting the complete separation of the dead from the live eggs was not practicable, and a paper to that effect was written and published by him in Vol. II, Bulletin of the United States Fish Commission. The present method employed by him for the separation of the dead whitefish eggs is to siphon off the dead eggs and such live eggs as are necessarily drawn over with them, and to transfer them to what he terms "hospital jars," the live eggs thus drawn being left to take their chances with the dead.

This mode of treatment undoubtedly has served to diminish materially the percentage of loss in the eggs thus treated by him, as in this way, by the sacrifice of a small proportion of the eggs he secures the very complete separation of all elements of contamination and disease from the great bulk of them.

In the spring of 1881, being in charge of a shad-hatching station on the Potomac River, and in position to observe closely the performance of the hatching apparatus in use, the question of the separation of the dead from the living eggs was taken up systematically with the view of devising a form of apparatus which would accomplish the purpose and which would be of such shape as to be of easy and convenient use in practice. Knowing that there was an apparent difference in the specific gravity of the living and the dead eggs I determined to see if I could not avail myself of this difference to effect the separation. The first form of apparatus employed is represented in Fig. 1,\* on the blackboard.

In the use of this apparatus I found that a fair separation could be effected, but to accomplish this required perfect stability of the vessel and careful manipulation. When the barges were lying quiet on the river and there was no tide swell in the river the separation went on quietly, the dead eggs being continually thrown off from the mass of living eggs and swept by the current over into the exit trough and carried off from the apparatus. The slightest oscillation, however, of the large, produced by waves, would derange the orderly movements of the eggs and required continual watchfulness on the part of the attendant to prevent considerable losses of live eggs. A second form of apparatus looking to the accomplishment of the same result was also tried.

The result with these forms of apparatus were not satisfactory in developing a method which could be conveniently applied in practice, yet they pointed the way to it. Later in the spring of 1881, while in charge of the hatchery, the suggestion of Professor Baird and in conjunction with Professor Ryder, we instituted in the basement of the Smithsonian Institution a series of experiments to determine the limit of healthful retardation of development that we could effect by lowering the temperature of the water employed. In order to subject the eggs conveniently to the action of the current of cold water they were placed in small, two-ounce laboratory flasks closely corked. Through the center of the cork was passed a glass tube which descended to within a short distance of the bottom of the flask and through which the current of water was admitted to the apparatus.

An exit tube, the lower extremity of which extends a short distance below the neck of the flask, provided for the escape of the water. While this form of apparatus had been devised by me in connection with the experiments on retardation above referred to, I had no sooner fixed upon the apparatus than I felt at once I had arrived at the solution of the question of automatic separation of the dead from the live eggs. An eight-ounce wide mouth glass jar, such as is used in the National Museum for holding alcoholic specimens was fitted up as indicated.

In this were placed 6,000 shad eggs, and a current of water turned on and regulated. The movement of the current established a regular rolling motion on the eggs, which brought each in succession to the surface. The dead eggs remained there, forming as they were freed from the mass of live eggs. By sliding down the exit tube to a suitable distance, I found that the dead eggs were feeling the influence of the escaping current, were by degrees drifted under the lower end of the tube, lifted by the

\*This consists essentially of an oblong trough with wooden ends and sloping glass sides, glass being used in order to be able to observe the movements of the eggs under the influence of the water. The trough rests upon a rectangular box made of boards, which serves at once as a firm base for the support of the trough and as a chamber for water upon the upper surface of the trough. The water, which enters the rectangular box forming the base of the apparatus through the supply pipe passes to the trough proper through a side extension, which is provided with a valve, which by means of the set rods can be pushed down so as to cut off the flow of water entirely. By setting the valve to allow a moderate flow of water, the water, which enters at about 1/32 of an inch, the water enters the hatching trough in thin sheets which are directed up the glass sides of trough. The effect of this is to give the water a rolling motion, the water being driven to the center. The water flows over the edges of the central trough, and escapes from the apparatus at the end. The dead eggs in their circuit in being lifted by the force of the current, are carried to the exit tube, and are swept out, leaving an absolutely clean mass of live eggs.

current, and swept out, leaving an absolutely clean mass of live eggs.

The mass of eggs was successfully hatched, and at the period of hatching not a dead egg was found in the bottle; nor do I think a live egg was lost in the whole course of the experiment.

The first experiments had been framed solely with reference to the assumed slight difference in the specific gravity of the living and the dead eggs. Attentive study of the movement of the eggs in the jar showed a still more potent influence for separation than the difference in the specific gravity. It is true there is a slight difference in this respect, but it is hardly appreciable. The more important difference, and that upon which the success of the apparatus depends, is the close adhesion which exists between the living eggs; the effect being that the live eggs roll in and out, and always in contact, even when they reach the surface, are by this adhesion carried around in the regular sequence of movement. On the other hand the dead eggs having once reached the surface, their adhesion to the underlying layer of eggs is not so strong, and they are ready in time for the shad hatching season. Consequently when they once reach the surface of the mass, they remain there until they are carried off by the exit tube.

Several experiments made with different lots of eggs gave uniformly the same satisfactory results.

In May, 1881, the apparatus was exhibited before a meeting of the Biological Society, held in the basement of the Smithsonian Institution. These experiments were so decisive, that I did not hesitate to recommend and urge the adoption of the new method in the work of the U. S. Fish Commission.

In the spring of 1882, it was determined to convert the old armory building into what is now known as the central hatchery and distributing station. Prof. S. F. Baird was the first to suggest his plan, and in the success of the new form of hatching apparatus by authorizing me to equip the station with them. The working form of apparatus not having been then even designed on paper, it was not possible to prepare the drawings and to have the jar complete and ready in time for the shad hatching season. An improvised form was devised in which cork stoppers were substituted for the screw cap, and metal tops employed in the form now fixed upon. Ten tables suitably planned to receive the waste water from the jars and carry it into the exit trough were constructed, the pipes for the distribution of water supply to the tables were introduced, and the station equipped with 300 of the jars. Each having a capacity of sixty to seventy thousand shad eggs, gave a total hatching capacity of 18,000,000, and at one time or another 900,000 for the entire shad hatching season. This was, of course, in excess of any possible production to be looked for; but in the organization of a shad hatching station it is necessary to provide for the contingency of the emergency, and it is better to have an interval of a few days of each other. The form of hatching apparatus used during the season is figured in FOREST AND STREAM of Oct. 26, 1882 (and here reprinted).

An arrangement of the present tables for the collection of the young fish as they hatch in appropriate receivers or aquaria was also devised. The present form of apparatus and the form contemplated in the first design, but only completed recently, is shown at Mr. Blackford's.

The method we have used of jars fitted up, one for the hatching of the eggs, the other for the collection of the young fish.

The jar consists essentially of a cylindrical glass vessel with hemispherical bottom. These are not blown, but pressed, in the glass, and the bottom is of the same material, which depends to some extent the perfect working of the jar. The glass foot which is shown in the improvised form has been omitted in the form now in use, the jar being supported upon a tripod of three glass legs, the lower ends of which are adapted to prevent the distortion of the bottom of the jar, which would necessarily result from the attachment of a single foot to it.

The top of the jar is cast with thread to receive a screw cap, the top of the bottom and the top surfaces are ground so that the plane of each shall be perpendicular to the axis of the jar and so that when the jar is resting upon its feet its axis shall be perfectly vertical.

The most important considerations to secure the proper working. The top of the jar is closed by a metallic disk perforated with two 3/16-inch holes, one perfectly central, which admits the tube that introduces the water into the jar, the other equally distant from the center, which introduces the tube for the escape of the water. A groove in the inner surface of this metallic plate carries a rubber collar, and when the plate is in place the tightening of the metallic screw cap, as in a fruit jar, seals the opening hermetically. Both the inlet and outlet tubes pass through stuffing boxes, by which means the tubes can be slid up and down easily and tightened firmly in any position we wish them to remain. The construction of the jar is such that when the metallic disk is in place the central tube takes the position of a vertical tube, and the lower end of the tube, which is the stuffing box, we can slide the central tube up or down so as to determine just what movement of the eggs we desire. If the quantity of water entering be small, or the head of water slight, without changing the feed of water we may vary the position of the central tube, which will cause the eggs to be pushed up or down, or to be almost in contact with the bottom of the jar we make a relatively small quantity of water do the work of a large quantity in producing motion. However, the position of the central tube, which controls the supply of water is needed and not a great deal of motion, we may secure this by increasing the feed and raising the lower end of the central or supply tube, so that the delivery of the water from it will be under less pressure. This central tube is connected by a rubber pipe with the pet cock which furnishes a supply of water under a constant head.

The exit tube serves a double purpose. First, as an outlet for the water, and secondly, at our pleasure to remove the live eggs from the jars. The exit tube is connected by a stuffing box, once in twenty-four hours—by loosening the screw of the stuffing box so that the tube will slide readily, pushing it down until the dead eggs nearest to the lower end are seen to begin to pass, and then pulling it up to remove the position of the exit tube, which will cause the live eggs to be swept off entirely. They may be allowed to pass off in the waste, or, better, collected by screens and fed to the fish in the aquaria, thus serving the double purpose of preventing the fouling of the water and furnishing a very important food for many varieties of fish. When the period of hatching approaches, instead of allowing the water from the hatching jars to pass directly into the sinks, it is necessary to conduct the water into a collecting tank, which will cause the construction to the hatching jar. Indeed, it is the hatching jar with some special arrangements to adapt it to its new purpose. The water passes from the hatching jar through the rubber tube into the collecting tank, and the water is then pumped into the collecting tank, which will cause the live eggs to be swept off entirely. They may be allowed to pass off in the waste, or, better, collected by screens and fed to the fish in the aquaria, thus serving the double purpose of preventing the fouling of the water and furnishing a very important food for many varieties of fish. ## AMERICAN TEAM.

## AN OFFICIAL OPINION.

THE NATIONAL RIFLE ASSOCIATION OF AMERICA,  
OFFICE, No. 112 WILLIAM STREET,  
NEW YORK, July 22, 1883.

To the Editor of the *Forest and Stream*:  
It is not a difficult task for non-experts to offer critical observations about the inferiority of our American team. Unmerited reflections from those ignorant of facts are pardonable, while those who are familiar with rifle practice regard our defeat from a very different line of rational argument.

The National Rifle Association does not assume to become an apologist for inexperienced sharpshooters, but when amateurs attempt to mislead or misjudge the situation it becomes a pleasant duty to defend and instate the American team in its proper position.

The impression that these contests are shot under similar conditions and with similar rifles as in those matches which made American riflemen famous through consecutive victories does not seem to have escaped the attention of our countrymen. The truth is that it was impossible to induce our English friends to meet us, as of yore, with our fine sighted and scientifically adjusted weapons, that superinduced the most accurate marksmanship; and I repeat my former assertion that, with our fine rifles, America stands first and foremost, and it would be an exceedingly difficult undertaking to win the laurels that remain accredited to the United States.

British sharpshooters, under the enthusiastic direction of that whole-souled, genial rifleman, Sir Henry Halford, smarting under

repeated defeats, were extremely anxious to introduce a match that would enable Great Britain to win. After considerable correspondence the National Rifle Association concluded the terms and conditions, which were in every particular to their advantage. Instead of using the rifle with which our previous victories had been won, we agreed to use a strict military weapon, with open front and primitive rear sights—appliances which Americans have long since discarded as unprogressive and considered practically obsolete. The distances were divided into two stages—200, 500 and 600 yards—the regular military distances, where we can hold our own with any country, even with inferior military arms; the second stage was arranged to had any experience or practice. We expected to be beaten and never disguised our opinions; it was only a question of how many points, in the first competition on our team were armed with inferior military rifles, the English weapon being quite equal to our fine sporting rifles, so far as it referred to accurate rifling and skilful workmanship, a fact admitted by Sir Henry Halford and his team. On completion of the match our team were beaten under favorable conditions at all the distances, and submitted to it like soldiers and philosophers.

The greatest gain made by our British friends was at the long ranges, where twenty years' practice enabled them to become expert and masters of all the atmospheric conditions, including shooting in a rain storm. What had we to show against such experience? Three months' practice! Is it a wonder that we were beaten 170 points with such a combination of advantages? In addition to the enumerated

forces, as a matter of fact Great Britain has over 500 qualified marksmen in the first class to select fourteen men from; it was with the greatest difficulty that we could secure forty men to enter for competition for places on the team.

What did the first defeat accomplish for the return match? Our answer is, one of the objects of the match, it led to the production of a superior military rifle and another season of practice, thus giving us one and a half years' experience to our competitors' twenty at the longer ranges. Interested partisans have made an attack on the Brown rifle, with which more than one-half of the team were armed in the return match, and attribute the defeat to its use. Let the public draw their own conclusions from the following statement: The majority of the men in our team who used the other rifle are at the bottom of the list; so defeat cannot fall on the Brown rifle. Too much praise cannot be offered to Mr. Brown for his indefatigable attempts to produce a military arm equal to the English, calculated to assist in winning the Wimbledon competition; therefore, any attempt to involve it in our defeat is unjust and actuated by other than sound motives.

To the general facts connected with the match we can add nothing until the captain of the team, Colonel G. E. P. Howard, makes his report. To state that the results of the shooting by our team at 200, 500, 600 and 800 yds., with a lead at the latter distance of twenty-four points, was an unqualified surprise to every National Guardsman, and even to the British Volunteers, is simply to substantiate the truth. We had a perfect right to indulge

(CONTINUED ON PAGE 514.)

## SECOND STAGE TARGETS.

## BRITISH TEAM.

## AMERICAN TEAM.

the fond delusions of hope of a victory by the then recorded facts, and the four scores of shot, showing a gain of 30 per cent. per man, presented conclusive evidence that the team had neither lost their minds nor their nerves.

At the finish of the 900-yds. distance a rain storm is introduced, coming down in torrents—an absolutely new condition to our team, not only modifying the light, but obscuring the targets, and in such an atmosphere the men were allowed to continue the match "as they had no orders to the contrary from the British Council." The scores on both sides indicate demoralization, and in the sense of a perfect competition, while both teams showed equally good marksmanship, it cannot be considered the fair test under the circumstances. This observation is purely personal in its application, but many will readily concede the same. What we are anxious to emphasize is the fact of having made such rapid improvement over our first match, that we were able to surpass the efforts of the twelve best of all Great Britain at 300 yds. and 900 yds. 31 points to our credit, which is indeed a great victory in itself, and also of having reduced the loss of 10 to 45, under the most extraordinary conditions. It is our firm belief that if fair weather had continued, with our lead of 24 points at 900 yds., we would have been victorious. We are not dissatisfied with the result, but to impeach the capacity and ability of the sharpshooters on the team demands a refutation and plain statement of facts.

These competitions will undoubtedly be continued in the future between our National Guardsmen and the British Volunteers. The international match was created for the wholesome purpose, in a military sense, of improving the military rifles and as a stimulus to encourage sharpshooters among our National Guard and militia. The value of rifle practice has exhibited itself in the past, and we may have abundant opportunities in the future. With scarcely an army large enough to protect us from the ravages of our Indian chieftains, we must in time of peril, when the civil powers fail, suppress rebellion and riot through our citizen soldiery. Our institutions and education afford the means of judiciously arming the people, and the increasing population, annually augmented by the exponents of communism and socialism, and the increasing number of our military emergencies and possibilities, and in the event of our National Guard being called upon it is highly necessary that they should have an excellent knowledge of the use of the rifle. The rifle is the most important capacity should encourage rifle practice to even a greater extent than it does at the present time, supported strongly by every citizen who believes in the protection of life, property and the public welfare.

Already our National Guardsmen realize necessities which defend inspires, and it is safe to prognosticate that a greater interest will in future be taken in rifle practice. We feel sanguine that a victory can be expected in our next competition with British Volunteers.

GROVER J. STANLEY.

#### A NEW TARGET.

Editor Forest and Stream:

With much satisfaction I have for a long time used a target system for rifle practice, and I have been thinking of a new target, and many particulars so much superior to either the Creedmoor or decimal systems that I venture to submit it for inspection.

I assume that a score from one to five is a definite and definite to represent the merit of a performance and that the diameter of the bullseye represents the size of the target by always representing one-fifth the diameter of the target. To illustrate, take a 30, bullseye, the target would be 30 in. in diameter, and the remainder of the score, 3, 2 and 1, would be represented by circles 2, 3, 4 and 5 in diameter respectively. 2, 3, 4 and 5 of the diameter of the bullseye, making 5, 11, 17 and 25. The sum of 1, 2, 3 and 4 being 10, we have also a ready computation by taking the sum of the diameters of the circles, after deducting the diameter of the bullseye, for the different circles.

An 80, bullseye would call for a 40 in. target divided as follows: 8, 15, 12, 12, 22, 49.

It will be observed that in these divisions the scores and diameters sustain the same relations to the bullseye under all circumstances, and the score represents the diameter of the bullseye, and the diameter of the bullseye represents the score. Also that the divisions are sufficiently close and yet simple to fairly meet any demands by varying the size of the bullseye.

I would like to have the opinion of some of our experts on the target of 5, 7, 11 and 25, as noted above.

WISCONSIN.

#### RANGE AND GALLERY.

CHICAGO, July 14.—Match shot by the Englewood Rifle Club, Conditions, 200 yds., off-hand, Creedmoor rules and target; copies of Farrow's "How to Shoot" as the "rule book" as first and second prizes. Weather stormy with a heavy wind veering from south to west, making one of the worst of the many bad days this season.

Match results: 1. 4 5 5 5 4 4 4 5 4 4 3. 2. 4 5 5 5 4 4 4 5 4 4 3. 3. 4 5 5 5 4 4 4 5 4 4 3. 4. 3 5 5 5 4 4 4 5 4 4 3. 5. 4 5 5 5 4 4 4 5 4 4 3. 6. 4 5 5 5 4 4 4 5 4 4 3. 7. 4 5 5 5 4 4 4 5 4 4 3. 8. ILEEN.

THIS new cutter now building by Piegrass, at Greenpoint, for Mr. Padelford, promises to be the handsomest and best built work of the kind ever turned out in America. The design is one of Mr. John Harvey's best and is of extraordinary fairness and so well schemed out and fully digested in its many details that we look for a most creditable record, should her owner put his new vessel to a test in the principal matches this fall. Although planned in direct opposition to the prejudices and nonsensical dogmas of the fast-dying school of old-fashioned light displacement hobbies, the extreme proportions of the Ileen are not new nor untried. Mr. Harvey having previously put similar principles through thorough and satisfactory tests in his long practical experience in yacht building. We look forward with confidence to a complete realization of the intentions of both designer and owner as far as the planning of the yacht is concerned. That she will be the handsomest, smartest and best built and fitted vessel ever floated from a yard in America needs no assertion on our part, as a visit to the yard will afford ocular demonstration in confirmation. The chief dimensions of the Ileen are as follows:

Length over all	78ft.
Length on loadline	65.5ft.
Beam extreme	11.5ft.
Depth, top beams to top floor	11.5ft.
Least freeboard to covering board	3.6ft.
Bulwarks	1.4ft.
Greatest draft of water	11ft.
Displacement	80 tons.
Load on keel	30.5 tons.
Projected inside	12.5 tons.
Total ballast	44 tons.
Mast, deck to lower cap.	44.6ft.
Masthead	1ft.
Mast housed	11ft.
Mast above deck	53.6ft.
Topmast, fid to pin	34.4ft.
Topmast, pin to shoulder	1ft.
Topmast, pole	5.3ft.
Topmast, outboard	34ft.
Boresprit housed	13ft.
Boom	58.6ft.
Gaff	37.6ft.
Hoist of mainsail	35ft.
Topsail yard	55.6ft.
Spinnaker boom	60.6ft.
Diameter of mast at deck	12.5in.
Diameter of bowsprit at stem	9.4in.
Diameter of boom	11.4in.
Diameter of gaff	7.4in.
Diameter of topmast	7.4in.
Spread of crossrees	15ft.
Area mainsail	2,355sq. ft.
Area foresail	428sq. ft.
Area jib	630sq. ft.
Area three lower sails	3,485sq. ft.
Trysail gaff, length	14ft.
Trysail on foot	35ft.

In construction the Ileen is without a peer in America, and far ahead of usual customs in material, fastenings and accuracy of work. She is building under the immediate superintendence of Mr. Harvey, which is a guarantee that she will sail alike on both tacks, and that the drawings will be accurately reproduced "in the flesh." The plan followed is a very superior one, similar to that which has given such satisfaction in Bodouin, and made Wenmah the crack of our single-stickers. Lightness, with great strength, long life and a dry hold, are secured by Harvey's double-skin plan to a greater degree than any other work put in practice. The method consists essentially of a stout backbone and a light frame, with two sheathings of plank wrought in the greatest lengths obtainable over the frame, the seams of the inner and outer skins overlapping, giving a surface to caulk against, and with a coating of white lead between the skins, rendering a leak impossible. Mechanics will at once appreciate the enormous addition to strength thus gained. The two skins being thoroughly clinch-fastened with copper, and all butts and seams giving great shift to one another, virtually makes the hull a unit in construction throughout, whereas the usual method of building with heavy frame of short pieces and single thickness of plank is, by comparison, a bungling job, unmechanical in origin, and weak as well as leaky, and characterized as a bundle of sticks thrown together. Lightness and roominess of hull are secured in the Ileen as well, the saving going to increased ballast and accommodation.

The keel proper is of selected white oak, 4ft. wide and 8in. deep. It is a "built" keel, composed of three pieces in width, so securely bolted together as to make the whole stronger than a large and more or less faulty balk, even could one be obtained to dress to the required shape. The lead keel is 18in. deep, 3ft. wide across the bottom, and 3.6ft. long. It is bolted up to the wood with 1 1/2in. copper, spaced 30in. apart, the bolts being driven diagonally to support the great width of lead better than if driven in the middle line only. The lead was cast separately and allowed to cool before being placed, so as to obviate all risk of splitting the wood keel by the contraction of the metal. The rocker to keel is moderate, as is also the roundup to forefoot, and but little is taken off the heel, the Harvey boats differing from other recent designs in not being so extravagantly cut up at the ends. The stem is 7 1/2in. sided, and the stern post 12in. at the head and 4in. at heel. Apron and knee forward and aft for deadwood aft with a long knee over all. The framing consists of regular sets of double timbers spaced 5ft. with two steam bent timbers between, giving a general spacing of 20in. All have double floors, which are 8in. sided, each. The two floors of the regular frames lay close together with long and short arms on alternate sides of the middle line. To their heads the heels of the first futtocks of the double frames butt. The steamed frames, however, run down between two 8in. floors, the heels being nipped by the heads of the floors, all being bolted through. These bent timbers are 3in., the first futtocks are 3 1/2in., second and third futtocks 3in. Owing to the easy form of the bottom most of the frames are in one piece from head to heel, which in itself adds greatly to the strength of the yacht. The steamed framing of course runs from covering board to keel each side. A main keelson is worked clear fore and aft in one length over the floors, the bolts of the lead and keel fastenings generally going up through the keelson, making a backbone which can never be logged or broken by the weight hung to it, and giving the hull perfect rigidity, preventing working in a seaway with the nuisance of opening seams as in yachts of ordinary construction. The keelson is of oak 3 1/2in. square, lead wood and bow fastenings are of 7 1/2in. Muntz's metal. There are besides sister keelsons 5 1/2in. square, also worked in one length fore and aft, and floor-head strakes 3 1/2x8 1/2in. The counter timbers are 4in. sided, and the quarter timbers are hewn out solid cedar. Clamps are 3 1/2x3 1/2, tapering in thickness to 1in. at the ends. An oak shelf is laid above these for the reception of the beam ends and is 5 1/2in. square. In ordinary practice this shelf is generally omitted, and the bearings of the beams seriously reduced. This fault is then made up in some cases, where builders are mechanics enough and possess some conscience, by resorting to a cumbersome system of kneeling, which in the end is more expensive and not as effective. The beams of the Ileen are 3 1/2 and 4in. sided. To prevent any possible distortion of the sheer by the pull of the rigging, a most excellent, simple and inexpensive expedient is resorted to. It is a comment upon the crude state of yacht building in America that something similar has not come into practice aboard our wide yachts, which are inherently weak structures, owing to their form and flat floor and the enormous rise required to drive them. In the Ileen a bar-iron strap is worked across a number of frames in the shape of an inverted arch, the ends reaching down to take two bolts through first futtock head and the crown passing up under the clamps. This iron strap is 2 1/2x3 1/2 iron. It is easily made and fastened in place at trifling cost, yet it would be in many cases the direct cause of preventing the sides being pulled up in wake of the rigging, thereby saving a material loss in market value to the boat in old age. Another strain had been worked over the frames in wake of the backstays for a like purpose. These inverted girders are indicated in the accompanying profile by the dotted arches. For tying the yacht's ends there are three large hooks in the bow and two aft. There are eight hanging knees of wood, and the principal cabin beams have also iron knees with four bolts clenched through frame and plank and also through the beams. Seven iron pillars serve as a vessel tie. They run from deck to keelson, and being located alongside the bulkheads do not interfere with the cabin arrangements. The best sheathing of plank is 5 1/2in. Georgia pine. The outer sheathing is all 1 1/2in. best oak, so put on as to lap seams with the inner skin. A layer of white lead is applied between the two. These skins are fastened together by eight 3 1/2in. copper bolts, clinched through between each frame. All butts and floor head strake are also through, fastened in each frame with 3 1/2in. copper. The fastening of the yacht throughout is all copper clinch work, no spikes or iron being permitted in such first-class work. The deck will be exceedingly handsome. Along the center will be a wide piece of thick stuff of Spanish cedar. The plank proper is 3 1/2in. thick and will be sprung with a taper fore and aft to the yacht's side, butting into the cedar strake amidships. Eight feet from the stern the fore and aft plank butts into athwartship plank sprung to the round of the arcboard. All deck fittings are to be of teak. They include a fore hatch, the 4x11 1/2ft. galley skylight 2.10x2.10ft.; main skylight, 4.9x6ft.; companion hatch, 4.5x1.5ft.; after cabin

Aug. 24—American Canoe Association Meeting at Stony Lake.

A CRUISE ON THE MOKELOMNE.

FIRST PAPER.  
AND I had been making cruises for the last two years, but unfortunately they were most all made in my dining-room, with our legs "under the mahogany" (for I possess one of those relics of a bygone time, a mahogany dining table), and consequently we never got very far.  
Determined to do something to save our credit, I proposed to F. a real bona fide cruise, but F. had meanwhile proposed to a young lady, and this combined with a recent capsize on his part, upset our plans, and compelled him, as he thought, to decline the adventure. Made only the more determined by this defection, I accepted the invitation of a friend to take a trip to his ranch on the Mokelumne among the tules, and one Saturday afternoon, placing my canoe in water and donning a new jacket and a new white canvas belt, prepared in honor of the occasion, set sail from the boat-house of the San Francisco Canoe Club, with a chipping breeze.  
Now if there is one thing more than another which I detest, it is running before the wind in a heavy sea; and off Meigs' Wharf I found I must either sacrifice my dignity or take the chance of a ducking. When it is a question of dignity or ducking, dignity has to go to the wall, and so the balliards were let go, and the pocket handkerchief which serves the Folly as a memento incontinently bundled on deck. A few minutes' paddling brought us out of the wharf and under the shelter of the sea wall.  
To the average spectator a full-rigged ship is a construction of considerable magnitude, but if one wants to know how large a ship really is, let him paddle alongside of one in a canoe, the immensity of the subject will then strike him with commensurate force. The committee, as usual, hailed my appearance with those manifestations of interest which would be flattering if they were not so pointedly personal, and it is sometimes embarrassing to one's vanity to be gravely questioned by some venerable individual on the wharf in stentorian tones to have a care for one's personal safety, when one feels, my friends, that no one is more capable of looking out for that very thing than the person addressed, and no one probably less than the person offering the advice. Being firmly impressed with the idea that Noah, if he had had a good canoe, might have got along reasonably well without any ark on a certain great aquatic excursion of his, I am afraid I did not receive such warnings in a proper spirit, and generally feel more inclined to tell my advisers to go to—Congress than to heed their words. The first stage of my journey was to the Mokelumne upon my discovery of a certain small tugboat owned by my host, or a certain large bay barge, her consort, also his property, and these, or one of them, I was led to look for at Green street wharf, but when after dropping sail for the second time, for I had hoisted again as soon as I was out of rough water, an hour or more was spent in vain search and the Folly's nose was turned toward the boat house. I had gone but a short distance when I saw a small steamer lying at one of the wharves, and ran in to take a look at her, and while examining her I noted the arrival of a certain naval architect, who, in days when I had more money and kept a yacht, built me several boats. I knew that he had built the tug I was in search of,

MEMORANDA OF ROUTE FROM LINDSAY TO TRENTON BY RIVERS AND LAKES.

Stations.	Stillwater and River Navigation.	Interm. distance, miles.	Total distance, miles.	Remarks.
Lindsay to mouth of River Seugog.	Still water.	8	....	Slack current.
Mouth of River (Sturgeon Lake) to Bobcaygeon.	Still water.	12 1/2	20 1/2	Sturgeon Lake averages 1 1/2 miles wide.
Bobcaygeon to Pigeon Lake.	Smooth current.	1	21 1/2	Can lock through.
Mouth of River to foot Pigeon Lake.	Still water.	8	29 1/2	Pigeon Lake, one mile wide.
Narrows to Buckhorn Dam.	Still water.	6	35 1/2	
Buckhorn Dam to foot Rapids.	Strong current.	3 1/2	39 1/2	Portage right bank.
Head Deer Bay to Burleigh Rapids.	Still water, except Love's sick Rapids, twenty rods.	7 1/2	46 1/2	Can run Lovesick Rapids.
Burleigh Rapids.	Rough Rapids.	1 1/2	48 1/2	Carry on left bank or at side.
Foot Burleigh Rapids to A. C. A. Camp.	Still water.	6	54 1/2	Welcome to Stony Lake!
A. C. A. Camp to Young's Point.	Still water.	1 1/2	56 1/2	Keep to right bank at Young's Point.
Young's Point Rapids.	Still water.	1 1/2	58 1/2	Can lock through or run dam.
Foot of Rapids to Lakefield.	Continuous rapids.	9 1/2	68 1/2	Lakefield, carry on the left bank.
Lakefield to Little Lake—fall 90 feet.	Still water.	13	81 1/2	Rapids and mill ponds, four dams.
Little Lake to Whitt's Rapids.	Still water.	13	94 1/2	Can lock through or short portage.
Whitt's to mouth Otanabee River.	Slack current.	13	107 1/2	Slack current all way to Rice Lake.
Mouth River to foot of Rice Lake.	Still water.	13	120 1/2	Average width of lake, 3 miles.
Rice Lake to Hastings (lock).	Slack current.	12	132 1/2	River Trent, one-quarter mile wide.
Hastings to Healey's Falls.	Slack current.	12	144 1/2	Average width of river, 30 rods.
Healey's Falls—total fall 70 feet.	Half mile.	1 1/2	146 1/2	Carry on left bank one-quarter mile.
Foot Healey's Falls to Crow Bay.	Heavy rapids.	3	150 1/2	Half mile wide.
Head Crow Bay to Middle Falls.	Still water.	1	151 1/2	Carry on left bank one-quarter mile.
Middle Falls—total fall 23 feet.	Half mile.	1 1/2	153 1/2	Carry on right bank.
Middle Falls to Campbellford.	Rapids.	2 1/2	156 1/2	Carry on right bank one-quarter mile.
Campbellford to Ranney's Falls dam—fall 25 feet.	Rapids.	1	157 1/2	Continuous rapids, nine miles per hour; keep the left channel.
Foot Ranney's Falls to Percy Landing—fall 65 feet.	Rapids.	12	169 1/2	Open bay for five miles from Boom.
Percy Landing to Chisholm's Rapids.	Still water.	6	175 1/2	Carry on right bank.
Chisholm's Rapids.	Slack current.	6	181 1/2	River 50 rods wide.
Head Bay to head Nine Mile Rapids.	Rapids.	9	190 1/2	Continuous rapids, nine miles per hour.
Head Nine Mile Rapids to Trenton—fall 96 feet.	Rapids.	9	200 1/2	

Total fall from Rice Lake to Bay of Quinte, at Trenton... 365 feet.  
From Port Perry to foot Seugog Lake... 194 miles  
Seugog River to Lindsay, slack current... 90  
Cobocnic to mouth Gulf River... 3 "

And that he takes a sort of fatherly interest in all his productions, so as a sort of forlorn hope, I asked him if in his peregrinations he had seen aught of her. He hadn't; my spirits sank, but he heard that the barge was discharging at Folson street. My spirits rose again, but then it was a decidedly long pull to Folson street, against the head wind and getting late and no certainty at that. "Nothing venture, nothing win," thought I, and if I don't find her, I'll have a booming tide to come home with. Settling myself to business I worked my way along, hugging the wharves and looking for eddies, thinking all the time what a jolly place this would be for canoeing, if the wind did not blow hurricanes all summer, and the tide did not tear and churn so among the piles, until the dismounted shed falling to pieces over Folson street wharf, where in the old times the Constitution, the Golden Age, the Golden Gate, the John L. Stephens, the Moses Taylor, and a lot more "naval triumphs" that are ghosts now, were wont to make things lively, hove in sight. There, sure enough, hidden away in the shadow of her overgrown consort, lay the object

of my search, and mine host just in the act of locking the pilot-house to go ashore. A halloo acquainted him with my propinquity, and in a few minutes I was safely alongside. How he stared and laughed at my illupitican craft and my business-like air and costume, but he helped me haul the Folly on deck and stow all the movables in the pilot-house that the over-present and acquisitive wharfrat might not run off with them.  
WILL BROOKS, Canoe Folly, S. F. C. C.  
KENNEBEC AND MEGANTIC.—Vessels, Neide and Hubbard have returned from their cruise up the Kennebec and Dead rivers, Chain Ponds and Lake Megantic, and report many portages over dams and fles made life in the wilderness lively if not interesting. Game is plentiful about the Cham Ponds and Lake Megantic; few caribou but many moose and deer, and trout in all the streams. The trip down the Chaudiere was abandoned, owing to the low water. Dr. Neide will go to Stony Lake about August 1.

### Shields' American Improved Gut Leader or Casting Line.

All fly fishers will readily see the advantage there is in using them. The easiest way to apply a fly or to remove it without impairing the strength or durability of the leaders. Lengths, 3, 6, and 9 feet, made of superior silk worm gut in all varieties. Fine trout, salmon and bass flies, and waterproof silk lines.  
JOHN SHIELDS,  
Box 221, Brookline, Mass.

### How I Became a Crack Shot,

—BY—

W. MILTON FARROW.

Price \$1.00, postpaid.

For sale by Forest and Stream Pub. Co.

### REVISED EDITION.—AMERICAN KENNEL AND SPORTING FIELD, by Arnold Burges.

Price \$3.00.  
This very popular book has been entirely rewritten, greatly enlarged, and brought up to the times in all that relates to the broad field which it covers. It is profusely illustrated with cuts of the most celebrated dogs and sporting scenes, treats thoroughly of breeding, breaking (including "Force in Retrieving"), kennel management, selection of dogs, and all that relates to kennel and field work, making it the most comprehensive and useful book of the kind before the public.  
For sale by ORANGE JUDG CO., or C. T. DILLINGHAM, New York, or D. S. HOLMES, 29 Fourth St., E. D. Brooklyn.

## KYNOCH'S Patent "Perfect" Brass Shells,

MANUFACTURED BY

KYNOCH & CO., Birmingham, Eng.

These shells are made of extra fine thin pliable metal, with reinforced bases, are adapted to either Winchester or Wesson No. 2 primers. Can be reloaded as often as any of the thicker makes. Cost only about half as much. Weight less than paper shells. They shoot stronger and closer, and admit of a heavier charge, as owing to the thin metal, inside diameter is nearly two gauges larger. Load same as any brass shells, using wads say two sizes larger than gauge of shells. Or can be effectually crimped with tool as represented in cuts and straighten out to original shape when discharged. The crimping tool also acts as a reducer, an advantage which will be appreciated by all experienced sportsmen. Sample shells will be mailed (without charge) to any sportsmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or shells in case lots only, (2,000), and crimpers not less than one dozen, by

## AMERICAN Kennel Register.

A monthly record of kennel events for the information and guidance of breeders, exhibitors and owners of all breeds of dogs.

Its leading feature is the "Pedigree Register," of sporting and non-sporting dogs, which makes it the only complete Stud Book issued in America. A register number is given to each dog, and an index will be compiled at the close of each annual volume, thus forming a permanent work of reference. The pedigree registration fee is twenty-five cents. The first two numbers of the Register contained the pedigrees of 138 dogs.

Departments are also provided for the registration of stud visits, dogs at stud, births, sales and transfers, dogs at sale, and deaths.

Price lists of all the American shows will be given, with descriptions of the principal winners and dogs exhibited; also prize lists of important shows abroad. This department will include a record of field trials. The first two numbers of the Register contain prize lists of Washington, Ottawa and Pittsburgh shows.

The publication day is the fifth day of each month; and nothing can be received for publication later than the first day of the month. All matters intended for publication should be in the hands of the editor at the earliest practicable date. Entry blanks for each department will be furnished free on receipt of stamped addressed envelope.

TERMS:—Issued by yearly subscription only. The subscription price is one dollar per year. Make drafts and money orders payable to the Forest and Stream Publishing Company. Address, AMERICAN KENNEL REGISTER, P. O. Box 2,832, New York City.

We will mail it to you for \$2.00. Send breast measure.

## THE FOX GUN.

Secure one at once at our REDUCED PRICES, which will continue only for a short time.

American Arms Co.,  
103 Milk Street, Boston, Mass.

## The Colt Club Gun.

It should be remembered that while we are the chief distributors of the regular Colt Guns, we are sole agents in New York for the Colt Club Guns. The marvelous performance of these guns in pigeon and glass ball trap shooting is so well known that no word of commendation is necessary. Every genuine Colt Club Gun has the rubber heel plate with the words "The Club Gun" around a circle, within which appears the rampant colt beautifully embossed. We are also agents for the new Harrington & Richardson Hammerless Guns, which at about half the cost surpass all imported hammerless guns. Address,

P. O. Box 1114.

H. & D. FOLSOM, 15 Murray Street, New York.

B. F. NICHOLS & CO.,

BOSTON, MASS.,

Manufacturers of

HEXAGONAL SPLIT BAMBOO FISHING RODS,  
REMOVED TO 153 MILK STREET.

We are obliged to have more room in our factory and greater facilities for manufacturing our goods to meet the increasing demand. We have received the highest award and silver medal at the Massachusetts Charitable Mechanics' Association Fair for our superior goods. Send for catalogue.
